

MAX14954

Ruggedized Quad PCIe Redriver with Equalization and Extended Temperature Operation

General Description

The MAX14954 is a quad equalizer/redriver designed to improve PCI Express® (PCIe) signal integrity by providing programmable input equalization at its receiver and programmable redrive circuitry. The output circuitry reestablishes deemphasis lost on the board and compensates for circuit-board loss. The device permits optimal placement of key PCIe components. The device is useful with stripline, microstrip printed circuits, and balanced 100Ω cable.

The device is tailored for PCIe and features electrical idle and receiver detection on each channel. It is optimized for PCIe Gen III (8.0GT/s) and Gen II (5.0GT/s) data rates, while still handling Gen I (2.5GT/s).

The MAX14954 is available in a small, lead-free, 42-pin (3.5mm x 9.0mm) TQFN package for optimal layout and minimal space requirements. The device is specified over -40°C to +85°C extended operating temperature range.

Applications

- Industrial/Embedded PCs
- Computer on Modules
- Carrier Boards
- Test Equipment
- Rack Server Industrial PCs
- Medical Equipment

Benefits and Features

- Fully Integrated for Ease of Use and Design Flexibility
 - Optimized for PCIe Gen III (8.0GT/s), Gen II (5.0GT/s); Gen I (2.5 GT/s) Compatible
 - Four Levels of Input Equalization Up to 16dB
 - Eight Levels of Output Deemphasis Up to 9dB
- High Level of Performance to Overcome Noise in Lossy Channels
 - Random Jitter: 0.5ps_{RMS} (typ)
 - Deterministic Jitter: 10.5ps_{P-P} (typ)
 - Equalization Permits Placement Up to 30in FR4
- Robust Solution for Harsh Environments
 - Industrial Temperature Rated: -40°C to + 85°C
 - ±5kV Human Body Model (HBM) Protection on All Pins
 - Housed in a Flow-Through (3.5mm x 9.5mm) TQFN Package for Resistance to Vibration/ Shocks

Ordering Information appears at end of data sheet.

Absolute Maximum Ratings

(Voltages referenced to GND.)

V_{CC}.....-0.3V to +4V
 All Other Pins (Note 1)-0.3V to (V_{CC} + 0.3V)
 Continuous Current I_{N_P}/I_{N_N}.....±30mA
 Peak Current I_{N_P}/I_{N_N}
 (pulsed for 1μs, 1% duty cycle).....±100mA

Continuous Power Dissipation (T_A = +70°C)
 TQFN (derate 34.5mW/°C above +70°C).....2759mW
 Operating Temperature Range..... -40°C to +85°C
 Storage Temperature Range..... -55°C to +150°C
 Junction Temperature.....+150°C
 Lead Temperature (soldering, 10s)+300°C
 Soldering Temperature (reflow).....+260°C

Note 1: All I/O pins are clamped by internal diodes.

Package Thermal Characteristics (Note 2)

TQFN
 Junction-to-Ambient Thermal Resistance (θ_{JA})29°C/W Junction-to-Case Thermal Resistance (θ_{JC}).....2°C/W

Note 2: Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to www.maximintegrated.com/thermal-tutorial.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Electrical Characteristics

(V_{CC} = +3.0V to +3.6V, C_{CL} = 200nF coupling capacitor on each output, R_L = 50Ω on each output, T_A = -40°C to +85°C, unless otherwise noted. Typical values are at V_{CC} = +3.3V and T_A = +25°C.) (Note 3)

Pin Configuration

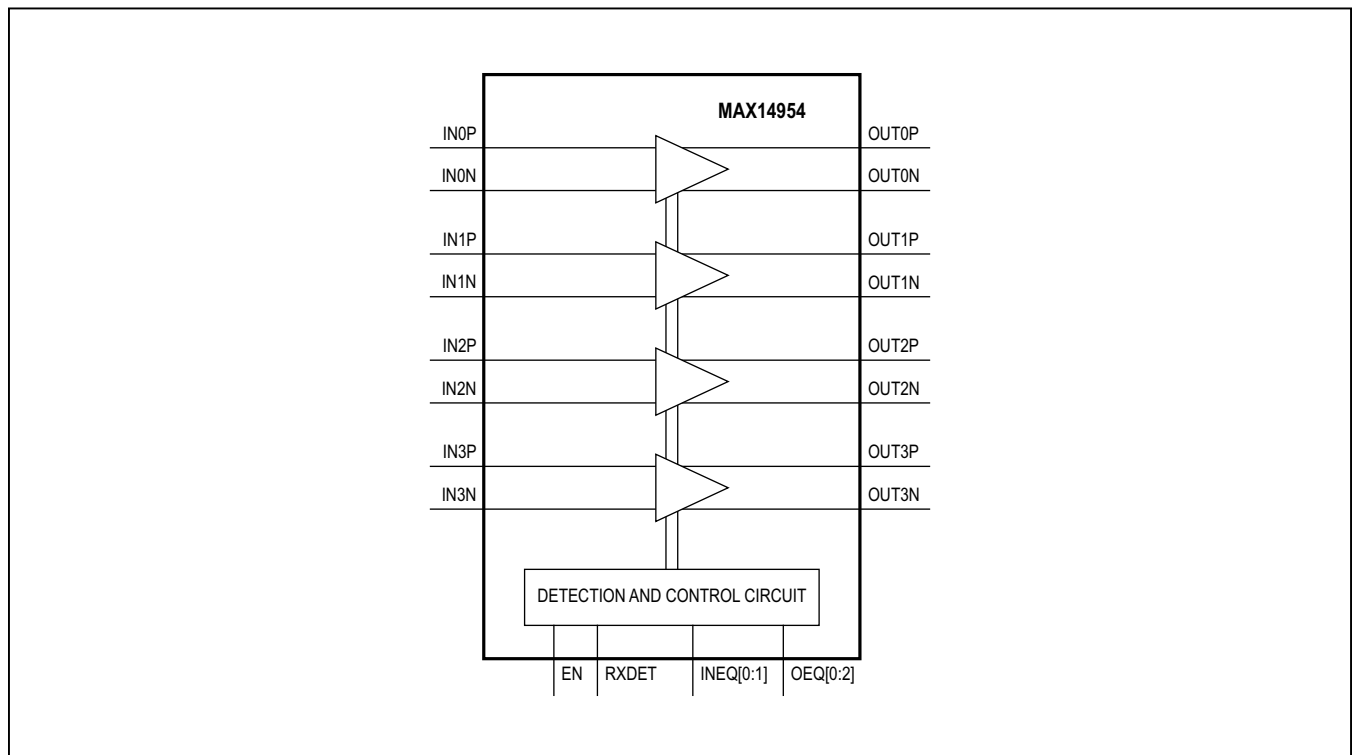

Pin Descriptions

| PIN | NAME | FUNCTION |
|---|-----------------|---|
| 1, 9, 17, 22, 30, 38 | V _{CC} | Power-Supply Input. Bypass V _{CC} to GND with 1μF and 0.1μF capacitors in parallel as close as possible to the device. |
| 2, 5, 8, 10, 13, 16, 23, 26, 29, 31, 34, 37 | GND | Ground |
| 3 | IN0P | Noninverting Input, Channel 0 |
| 4 | IN0N | Inverting Input, Channel 0 |
| 6 | IN1P | Noninverting Input, Channel 1 |
| 7 | IN1N | Inverting Input, Channel 1 |
| 11 | IN2P | Noninverting Input, Channel 2 |
| 12 | IN2N | Inverting Input, Channel 2 |
| 14 | IN3P | Noninverting Input, Channel 3 |
| 15 | IN3N | Inverting Input, Channel 3 |
| 18 | INEQ1 | Input Equalization Control MSB. INEQ1 has a 250kΩ (typ) internal pulldown resistor. |
| 19 | INEQ0 | Input Equalization Control LSB. INEQ0 has a 250kΩ (typ) internal pulldown resistor. |
| 20 | OEQ1 | Output Deemphasis Control Bit 1. OEQ1 has a 250kΩ (typ) internal pulldown resistor. |
| 21 | OEQ0 | Output Deemphasis Control LSB. OEQ0 has a 250kΩ (typ) internal pulldown resistor. |
| 24 | OUT3N | Inverting Output, Channel 3 |
| 25 | OUT3P | Noninverting Output, Channel 3 |
| 27 | OUT2N | Inverting Output, Channel 2 |
| 28 | OUT2P | Noninverting Output, Channel 2 |
| 32 | OUT1N | Inverting Output, Channel 1 |
| 33 | OUT1P | Noninverting Output, Channel 1 |

Pin Description (continued)

| PIN | NAME | FUNCTION |
|-----|-------|---|
| 35 | OUT0N | Inverting Output, Channel 0 |
| 36 | OUT0P | Noninverting Output, Channel 0 |
| 39 | EN | Enable Input. Drive EN low for standby mode. Drive EN high for normal mode. EN has a 250kΩ (typ) internal pulldown resistor. |
| 40 | RXDET | Receiver Detection Control Bit. Drive RXDET high to initiate receiver detection. Drive RXDET low for normal mode. RXDET has a 250kΩ (typ) internal pulldown resistor. |
| 41 | OEQ2 | Output Deemphasis Control MSB. OEQ2 has a 250kΩ (typ) internal pulldown resistor. |
| 42 | I.C. | Internally Connected Pin |
| — | EP | Exposed Pad. Internally connected to GND. Connect EP to a large ground plane to maximize thermal performance as well as good ground conductivity to the device. |

Functional Diagram

Detailed Description

The MAX14954 quad equalizer/redriver is designed to support Gen III (8.0GT/s), Gen II (5.0GT/s), and Gen I (2.5GT/s) PCIe data rates. The device contains four identical drivers with electrical idle/receive detect on each lane and equalization/deemphasis/preshoot to compensate for circuit-board loss. Programmable input equalization circuitry reduces deterministic jitter, improving signal integrity. The device output features a programmable output deemphasis/preshoot, permitting optimal placement of key PCIe components and longer runs of stripline, microstrip, or cable.

Programmable Input Equalization

Programmable input equalization is controlled by two bits: INEQ1 and INEQ0 (Table 1).

Table 1. Input Equalization

| INEQ1 | INEQ0 | INPUT EQUALIZATION (dB) |
|-------|-------|-------------------------|
| 0 | 0 | 5 |
| 0 | 1 | 8 |
| 1 | 0 | 12 |
| 1 | 1 | 16 |

Programmable Output Deemphasis/Preshoot

Programmable output deemphasis is controlled by three bits: OEQ2, OEQ1, and OEQ0 for deemphasis/preshoot ratios of 0dB, 3.5dB, 6dB, and 9dB (Table 2).

Table 2. Output Deemphasis/Preshoot

| OEQ2 | OEQ1 | OEQ0 | OUTPUT DEEMPHASIS/PRESHOOT RATIO (dB) |
|------|------|------|---------------------------------------|
| 0 | 0 | 0 | 0 |
| 0 | 0 | 1 | 3.5 |
| 0 | 1 | 0 | 6 |
| 0 | 1 | 1 | 6 (peak-to-peak swing is 1.2V) |
| 1 | 0 | 0 | 3.5 |
| 1 | 0 | 1 | 6 |
| 1 | 1 | 0 | 9 (peak-to-peak swing is 0.9V) |
| 1 | 1 | 1 | 9 (peak-to-peak swing is 1.0V) |

Receiver Detection

The device features receiver detection on each channel. Upon initial power-up, if EN is high, receiver detection initializes. Receiver detection can also be initiated on a rising or falling edge of the RXDET input when EN is high. During this time, the device remains in low-power standby mode and the outputs are disabled, despite the logic-high state of EN. Until a channel has detected a receiver, the receiver detection repeats indefinitely on each channel. If a channel detects a receiver, the other channels are limited to retries for 100ms (typ). For each channel upon receiver detection, input common-mode termination and electrical idle detection are enabled (Table 3).

Electrical Idle Detection

The device features electrical idle detection to prevent unwanted noise from being redriven at the output. When the device detects that the differential input has fallen below the VTX-IDLE-THRESH low limit, it squelches the output. For differential input signals that are above VTX-IDLE-THRESH high limit, the device turns on the output and redrives the signal. There is little variation in output common-mode voltage between electrical idle and redrive modes.

Table 3. Receiver Detection Input Function

| RXDET | EN | DESCRIPTION |
|---------------------|----|---|
| X | 0 | Receiver detection is inactive. |
| X | 1 | Following a rising edge of the EN signal, indefinite retries until receiver detects at least one channel. Retries stop after 100ms (typ) if any channel receiver is detected. |
| Rising/falling edge | 1 | Initiates receiver detection. |

X = Don't care.

Figure 2. Typical Application Diagram

Applications Information

Figure 2 shows a typical application with two MAX14954s, both residing on the main board with input and output equalization set individually for optimal performance. The MAX14954 Rx equalizer is set to receive a degraded signal coming from a remote board through two sets of connectors and a midplane stripline. The output of the Rx section has little or no output equalization. The Tx section takes a high-quality signal and provides boost to the output (deemphasis).

Layout

Circuit-board layout and design can significantly affect the performance of the device. Use good, high-frequency design techniques, including minimizing ground inductance and using controlled-impedance transmission lines on data signals. Power-supply decoupling should also be placed as close as possible to V_{CC} . Always connect V_{CC} to a power plane. It is recommended to run receive and transmit signals on different layers to minimize crosstalk.

Exposed-Pad Package

The exposed-pad, 42-pin TQFN package incorporates features that provide a very low-thermal-resistance path for heat removal from the device. The exposed pad on the device must be soldered to the circuit-board ground plane for proper thermal performance and good ground connectivity. For more information on exposed-pad packages, refer to Application Note 862: *HFAN-08.1: Thermal Considerations of QFN and Other Exposed-Paddle Packages*.

Power-Supply Sequencing

Caution: Do not exceed the absolute maximum ratings because stresses beyond the listed ratings can cause permanent damage to the device.

Proper power-supply sequencing is recommended for all devices. Always apply GND then V_{CC} before applying signals, especially if the signal is not current limited.

Ordering Information

| PART | TEMP RANGE | PIN-PACKAGE |
|--------------|----------------|-------------|
| MAX14954ETO+ | -40°C to +85°C | 42 TQFN-EP* |

+Denotes a lead(Pb)-free/RoHS-compliant package.

*EP = Exposed pad.

PROCESS: BiCMOS

Package Information

For the latest package outline information and land patterns (footprints), go to www.maximintegrated.com/packages. Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

| PACKAGE TYPE | PACKAGE CODE | OUTLINE NO. | LAND PATTERN NO. |
|--------------|--------------|-------------------------|-------------------------|
| 42 TQFN-EP | T423590+1 | 21-0181 | 90-0078 |

Revision History

| REVISION NUMBER | REVISION DATE | DESCRIPTION | PAGES CHANGED |
|-----------------|---------------|-----------------|---------------|
| 0 | 11/12 | Initial release | — |

For pricing, delivery, and ordering information, please contact Maxim Direct at 1-888-629-4642, or visit Maxim Integrated's website at www.maximintegrated.com.

Maxim Integrated cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim Integrated product. No circuit patent licenses are implied. Maxim Integrated reserves the right to change the circuitry and specifications without notice at any time. The parametric values (min and max limits) shown in the Electrical Characteristics table are guaranteed. Other parametric values quoted in this data sheet are provided for guidance.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
