

Preliminary Technical Data

ADA4700-1

FEATURES

- Low input offset voltage:** $\leq 0.2 \text{ mV}$ typical
- High output current drive:** $20\text{mA}, 50\text{ mA}$
- Wide range of operating voltage:** $\pm 5 \text{ V}$ to $\pm 50 \text{ V}$
- Specified at $\pm 5 \text{ V}, \pm 24 \text{ V}$, and $\pm 50 \text{ V}$**
- High slew rate:** $20 \text{ V}/\mu\text{s}$ typical
- High gain bandwidth product:** $\geq 3 \text{ MHz}$ typical
- On-board thermal shutdown at 165°C**
- Ambient temperature range of -40°C to $+85^\circ\text{C}$**
- Low input bias current:** $I_{BIAS} \leq 15 \text{ nA}$ typical

APPLICATIONS

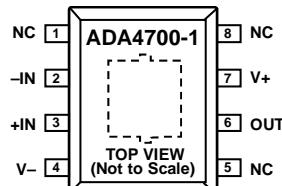

- Automated and bench top test equipment**
- High voltage regulators and power amplifiers**
- Data acquisition and signal conditioning**
- Piezo drivers and predrivers**
- General-purpose current sensing**

GENERAL DESCRIPTION

The ADA4700-1 is a high voltage precision operational amplifier with a wide operating voltage ($\pm 5 \text{ V}$ to $\pm 50 \text{ V}$) and relatively high output current drive available as a single op amp in an SOIC package. It combines low power consumption, high bandwidth, and a slew rate with unity-gain stability and phase inversion free performance. The ability to swing near rail-to-rail at the output enables designers to maximize signal-to-noise ratios (SNRs).

The ADA4700-1 is designed for applications requiring both ac and precision dc performance, making the ADA4700-1 useful in a wide variety of applications, including high voltage test equipment and instrumentation, high voltage regulators and power amplifiers, power supply control and protection, and as an amplifier or buffer for transducers with wide output ranges. It is particularly well suited for high intensity LED testing applications where it provides highly accurate voltage and current feedback as well as a predriver to provide accurate voltage and/or current sourcing stimulus to the LED string under test.

PIN CONFIGURATION

NOTES

1. NC = NO CONNECT. DO NOT CONNECT TO THIS PIN.
2. THE EXPOSED PAD MUST BE CONNECTED TO V-.

11551-001

Figure 1.

The ADA4700-1 is specified over the industrial temperature range of -40°C to $+85^\circ\text{C}$ and includes an on-board thermal shutdown at 165°C internal junction temperature as well as an internal current limit for safety. The ADA4700-1 is available in a thermally enhanced, 8-lead SOIC package that uses a small exposed metal pad on the bottom of the package to allow the customer to heat sink the part to the printed circuit board (PCB). For proper operation, the exposed pad must be connected to V-.

ABSOLUTE MAXIMUM RATINGS

Table 4.

Parameter	Rating
Supply Voltage	110 V
Input Voltage	$V_- \leq V_{IN} \leq V_+$
Differential Input Voltage	$V_- \leq V_{IN} \leq V_+$
Storage Temperature Range	-65°C to +150°C
Operating Temperature Range	-40°C to +85°C
Junction Temperature Range	-65°C to +150°C
Lead Temperature (Soldering, 60 sec)	300°C

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

MAXIMUM POWER DISSIPATION

The maximum power that can be safely dissipated by a plastic encapsulated package is limited by the junction temperature. The maximum safe junction temperature for plastic encapsulated devices, as determined by the glass transition temperature of the plastic, is approximately 150°C. Exceeding this limit temporarily

may cause a shift in the parametric performance due to a change in the stresses exerted on the die by the package. Exceeding a junction temperature of 175°C for an extended period can result in device failure.

THERMAL RESISTANCE

θ_{JA} is specified for the worst-case conditions, that is, a device soldered in a circuit board for surface-mount packages.

Table 5. Thermal Resistance

Package Type	θ_{JA}	θ_{JC}	Unit
8-Lead SOIC_N_EP (RD-8-2)	TBD	TBD	°C/W

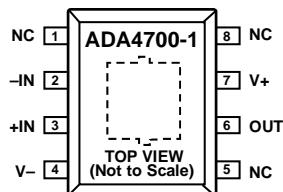

ESD CAUTION

ESD (electrostatic discharge) sensitive device.

Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTION

NOTES
1. NC = NO CONNECT. DO NOT CONNECT TO THIS PIN.
2. THE EXPOSED PAD MUST BE CONNECTED TO V-.

11551-003

Figure 2. Pin Configuration

Table 6. Pin Function Descriptions

Pin No.	Mnemonic	Description
1, 5, 8	NC	No Connect. Do not connect to this pin.
2	-IN	Inverting Input.
3	+IN	Noninverting Input.
4	V-	Negative Supply Voltage.
6	OUT	Output.
7	V+	Positive Supply Voltage.
	EPAD	Exposed Pad. Connect the exposed pad to V-.

ООО "ЛайфЭлектроникс"

"LifeElectronics" LLC

ИНН 7805602321 КПП 780501001 Р/С 40702810122510004610 ФАКБ "АБСОЛЮТ БАНК" (ЗАО) в г.Санкт-Петербурге К/С 30101810900000000703 БИК 044030703

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибуторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибуторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помочь разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
