Description

The ST3232B and ST3232C devices are 3 V powered EIA/TIA-232 and V.28/V.24 communication interfaces with low power requirements and high data-rate capabilities.

These devices have a proprietary low dropout transmitter output stage providing true RS-232 performance from 3 to 5.5 V supplies. The devices require only four small 0.1 mF standard external capacitors for operation from a 3 V supply.

Table 2: Pin description

| Pin n° | Symbol | Name and function |
|--------|--------------------|--|
| 1 | C ₁₊ | Positive terminal for the first charge pump capacitor |
| 2 | V ₊ | Doubled voltage terminal |
| 3 | C ₁₋ | Negative terminal for the first charge pump capacitor |
| 4 | C ₂₊ | Positive terminal for the second charge pump capacitor |
| 5 | C ₂₋ | Negative terminal for the second charge pump capacitor |
| 6 | V ₋ | Inverted voltage terminal |
| 7 | T ₂ OUT | Second transmitter output voltage |
| 8 | R ₂ IN | Second receiver input voltage |
| 9 | R ₂ OUT | Second receiver output voltage |
| 10 | T ₂ IN | Second transmitter input voltage |
| 11 | T ₁ IN | First transmitter input voltage |
| 12 | R ₁ OUT | First receiver output voltage |
| 13 | R ₁ IN | First receiver input voltage |
| 14 | T ₁ OUT | First transmitter output voltage |
| 15 | GND | Ground |
| 16 | V _{CC} | Supply voltage |

2 Absolute maximum ratings

Table 3: Absolute maximum ratings

| Symbol | Parameter | Value | Unit |
|-------------|--------------------------------------|--------------------------|-------------|
| V_{CC} | Supply voltage | -0.3 to 6 | V |
| V+ | Doubled voltage terminal | $(V_{CC} - 0.3)$ to 7 | |
| V- | Inverted voltage terminal | 0.3 to -7 | |
| $V+ + V- $ | | 13 | |
| T_{IN} | Transmitter input voltage range | -0.3 to 6 | |
| R_{IN} | Receiver input voltage range | ± 25 | |
| T_{OUT} | Transmitter output voltage range | ± 13.2 | |
| R_{OUT} | Receiver output voltage range | -0.3 to $(V_{CC} + 0.3)$ | |
| t_{SHORT} | Transmitter output short to gnd time | Continuous | |
| T_{stg} | Storage temperature | -65 to 150 | $^{\circ}C$ |

Absolute maximum ratings are those values beyond which damage to the device may occur. Functional operation under these condition is not implied.

Externally applied V+ and V- can have a maximum magnitude of +7 V, but their absolute addition can not exceed 13 V.

Running on internal charge pump, intrinsic self limitation allows exceeding those values without any damage.

Startup voltage sequence (V_{CC} , then V+, then V-) is critical, therefore it is not recommended to use this device using externally applied voltage to V+ and V-.
