

System Lens Driver for Digital Still Cameras / Single-lens Reflex Cameras

# 5ch System Lens Drivers for Digital Still Cameras

BD6370GUL, BD6758MWV, BD6758KN

No.09014EAT01

## ●Description

The BD6370GUL motor driver provides 3 Constant-Voltage Drive / Full-ON Drive H-bridge channels, 1 Constant-Voltage Drive / Linear Constant-Current Drive / Full-ON Drive H-bridge channel, and 1 Constant-Current Drive H-bridge channel, while the BD6758MWV and the BD6758KN provides 4 Full-ON Drive H-bridge channels and 1 Linear Constant-Current Drive H-bridge channel.

A Stepping motor can be used for auto focus and a DC motor for zoom and iris. ROHM offers both an advance type equipped with a D/A converter in all channels and a standard type, allowing selection of the ideal unit depending on the application.

## ●Features

- 1) Subminiature 24PIN Wafer-level CSP (Chip Size Package): 2.6 x 2.6 x 0.55mm<sup>3</sup> (BD6370GUL)
- 2) Resemblance 6ch drive function (BD6370GUL)
- 3) Drive type selection (BD6370GUL)
- 4) Low ON-Resistance Power CMOS output:  
All blocks (Const.-V/Full-ON Drive, Const.-V/Const.-C/Full-ON Drive, and Const.-Current Drive) with 1.4Ω Typ. (BD6370GUL) Full-ON Drive block with 1.2Ω Typ. and Linear Constant-Current Drive block with 1.0Ω Typ. (BD6758MWV / KN)
- 5) Serial interface 3-line bus control input (BD6370GUL)
- 6) Built-in Constant-Voltage control 6-bit D/A converter and Constant-Current control 6-bit D/A converter resolution (BD6370GUL)
- 7) Built-in ±5% high-precision Constant-Voltage Driver (BD6370GUL)
- 8) Built-in ±3% high-precision Linear Constant-Current Driver
- 9) Constant-Voltage Drive block and Constant-Current Drive block features phase compensation capacitor-free design
- 10) 1.2V±3% high-precision reference voltage output (BD6758MWV / KN)
- 11) Drive mode switching function (BD6758MWV / KN)
- 12) UVLO (Under Voltage Lockout Protection) function
- 13) Built-in TSD (Thermal Shut Down) circuit
- 14) Standby current consumption: 0μA Typ.

## ●Absolute Maximum Ratings

Parameter	Symbol	Limit			Unit
		BD6370GUL	BD6758MWV	BD6758KN	
Power supply voltage	VCC	-0.3 to +6.5	0 to +7.0	0 to +7.0	V
Motor power supply voltage	VM	-0.3 to +6.5	0 to +7.0	0 to +7.0	V
Control input voltage	VIN	-0.3 to VCC+0.3	0 to VCC	0 to VCC	V
Power dissipation	Pd	830 <sup>※1</sup>	880 <sup>※2</sup>	875 <sup>※3</sup>	mW
Operating temperature range	Topr	-25 to +85	-25 to +85	-25 to +85	°C
Junction temperature	Tjmax	+150	+150	+150	°C
Storage temperature range	Tstg	-55 to +150	-55 to +150	-55 to +150	°C
H-bridge output current	Iout	-500 to +500 <sup>※4</sup>	-800 to +800 <sup>※4</sup>	-800 to +800 <sup>※4</sup>	mA/ch

※1 Reduced by 6.64mW/°C over 25°C, when mounted on a glass epoxy board (50mm × 58mm × 1.75mm; 8layers).

※2 Reduced by 7.0mW/°C over 25°C, when mounted on a glass epoxy board (74.2mm × 74.2mm × 1.6mm).

※3 Reduced by 7.0mW/°C over 25°C, when mounted on a glass epoxy board (70mm × 70mm × 1.6mm).

※4 Must not exceed Pd, ASO, or Tjmax of 150°C.

## ● Operating Conditions (Ta=-25 to +85°C)

Parameter	Symbol	Limit			Unit
		BD6370GUL	BD6758MWV	BD6758KN	
Power supply voltage	VCC	2.7 to 5.5	2.5 to 5.5	2.5 to 5.5	V
Motor power supply voltage	VM	2.7 to 5.5	2.5 to 5.5	2.5 to 5.5	V
Control input voltage	VIN	0 to VCC	0 to VCC	0 to VCC	V
Control input frequency	FIN	100 <sup>※5</sup>	100 <sup>※5</sup>	100 <sup>※5</sup>	kHz
Serial clock input frequency	FSCLK	10 <sup>※5</sup>	-	-	MHz
H-bridge output current	Iout	-400 to +400 <sup>※6</sup>	-500 to +500 <sup>※6</sup>	-500 to +500 <sup>※6</sup>	mA/ch

※5 ON duty=50%

※6 Must not exceed Pd or ASO.

## ● Electrical Characteristics and Diagrams

1) BD6370GUL Electrical DC Characteristics (Unless otherwise specified, Ta=25°C, VCC=3.0V, VM=5.0V)

Parameter	Symbol	Limit			Unit	Conditions
		Min.	Typ.	Max.		
Overall						
Circuit current (Standby mode)	ICCST	-	0	3.0	μA	PS=0V
Circuit current (Active mode)	ICC	-	1.3	2.0	mA	PS=3V with no control signal, and no load
Control input (IN=PS, INPUT1, 2, 34, 45, STROBE, SCLK, and SDATA)						
High level input voltage	VINH	2.0	-	VCC	V	
Low level input voltage	VINL	0	-	0.7	V	
High level input current 1	IINH1	15	30	60	μA	VINH1 (PS, INPUT1, 2, 34, 45) =3V
High level input current 2	IINH2	7.5	15	30	μA	VINH2 (STROBE, SCLK, SDATA) =3V
Low level input current	IINL	-1	0	-	μA	VINL=0V
UVLO						
UVLO voltage	VUVLO	1.6	-	2.4	V	
Constant-Voltage Drive / Full-ON Drive block (ch1 to ch3)						
Output ON-Resistance	RON	-	1.40	1.75	Ω	I <sub>o</sub> =±400mA on high and low sides in total
Output high voltage 1	VVOH1	1.35	1.50	1.65	V	DACx=6'b01_0100, RL=20Ω
Output high voltage 2	VVOH2	2.85	3.00	3.15	V	DACx=6'b10_1000, RL=20Ω
Output high voltage 3	VVOH3	4.49	4.725	4.96	V	DACx=6'b11_1111, RL=20Ω
DAC resolution	DVRES	-	6	-	BITS	75mV/LSB
Differential non-linear tolerance	DVDNL	-1	-	1	LSB	
Integral non-linear tolerance	DVINL	-2	-	2	LSB	
Min. voltage of DAC setting	DVRNG	1.5	-	-	V	DACx=6'b01_0100
Constant-Voltage Drive / Constant-Current Drive / Full-ON Drive block (ch4)						
Output ON-Resistance	RON	-	1.40	1.75	Ω	I <sub>o</sub> =±400mA on high and low sides in total
Constant-Voltage Drive block in ch4						
Output high voltage 1	VVOH1	1.35	1.50	1.65	V	DACV4=6'b01_0100, RL=20Ω
Output high voltage 2	VVOH2	2.85	3.00	3.15	V	DACV4=6'b10_1000, RL=20Ω
Output high voltage 3	VVOH3	4.49	4.725	4.96	V	DACV4=6'b11_1111, RL=20Ω
DAC resolution	DVRES	-	6	-	BITS	75mV/LSB
Differential non-linear tolerance	DVDNL	-1	-	1	LSB	
Integral non-linear tolerance	DVINL	-2	-	2	LSB	
Min. voltage of DAC setting	DVRNG	1.5	-	-	V	DACV4=6'b01_0100
Constant-Current Drive block in ch4						
RNF voltage 1	VIRNF1	40	50	60	mV	DACI4=6'b00_1010, R <sub>RNF4</sub> =0.5Ω, RL=10Ω
RNF voltage 2	VIRNF2	94	99	104	mV	DACI4=6'b01_0100, R <sub>RNF4</sub> =0.5Ω, RL=10Ω
RNF voltage 3	VIRNF3	178	198	218	mV	DACI4=6'b10_1000, R <sub>RNF4</sub> =0.5Ω, RL=10Ω
DAC resolution	DIRE5	-	6	-	BITS	5mV/LSB
Differential non-linear tolerance	DIDNL	-1	-	1	LSB	
Integral non-linear tolerance	DIINL	-2	-	2	LSB	
Min. voltage of DAC setting	DIRNG	50	-	-	mV	DACI4=6'b00_1010
Constant-Current Drive block (ch5)						
Output ON-Resistance	RON	-	1.4	1.75	Ω	I <sub>o</sub> =±400mA on high and low sides in total

- 8) Application Control Sequence (BD6370GUL)
  - (1) Stepping Motor drive controlled by 2 phases mode ..... p.25/32 to p.26/32

## 1) Power-saving and Serial Reset (BD6370GUL; PS)

## (1) Function Explanation

When Low-level voltage is applied to PS pin, the IC will be turned off internally and the circuit current will be 0 $\mu$ A (Typ.). During operating mode, PS pin should be High-level. (See the Electrical Characteristics; p.2/32)

Be cancelled power saving mode after turned on power supply VCC and VM, because of PS terminal combines power saving with serial reset function. If the case of power saving terminal always shorted power supply terminal, reset function may not be well, and it may cause the IC to malfunction. (See the Sequence of Serial Control Input; p.12/32)

## 2) Motor Control Input (BD6370GUL; INPUTx)

## (1) Function Explanation

These pins are used to program and control the motor drive modes. So INPUTx switches CW or CCW, CW or Brake, and CCW or Brake, using serial function. (See the Electrical Characteristics; p.2/32 and I/O Truth Table; p.21/32 to p.23/32)

INPUT34 and INPUT45 pins drive ch3 or ch4, and ch4 or ch5, respectively. The driven channel is selected using serial function. (See the Driven Outputs for INPUT Terminal Table; p.14/32)

## 3) H-bridge (BD6370GUL; VM, OUTxA, OUTxB, and RNFx)

## (1) Function Explanation

The H-bridge output transistors of BD6370GUL are Power CMOS Drivers. The total H-bridge ON-Resistance on the high and low sides varies with the VM voltage. The system must be designed so that the maximum H-bridge current for each channel is 500mA or below.

The 3 H-bridges of ch1 to ch3 can be driven as the resemblance 4-channels. For this reason, it is possible to drive the 2 Stepping Motors by ch1 to ch3 as long as the 2 motors don't move simultaneously. The selection of resemblance drive mode for ch1 to ch3 is set using serial function. (See the Driven Outputs for INPUT Terminal Table; p.14/32)

The 2 control input terminals of INPUT34 and INPUT45 drive the 3 H-bridges of ch3 to ch5. Use caution because it is impossible to drive all 3 H-bridges simultaneously.

## (2) The D/A Converter Settings of Constant-Voltage, Constant-Current, and Full-ON Mode

The ch1 to ch3 enable Constant-Voltage or Full-ON Driving, and the ch4 enables Constant-Voltage, Constant-Current, or Full-ON Driving, while the ch5 is Constant-Current Driving.

In the case of Full-ON mode for ch1 to ch3, input serial data of each Constant-Voltage setting D/A Converter (DAC12 and DAC3) to be full bits high.

In the ch4, as it set Constant-Voltage mode, input serial data of Constant-Current setting D/A Converter (DACI4) to be full bits high. As it set Constant-Current mode, input serial data of Constant-Voltage setting D/A Converter (DACV4) to be full bits high, while as it set Full-ON mode, input serial data of both D/A Converters to be full bits high. In the settings of Constant-Voltage or Full-ON mode, no need to connect the external resistance for output current detection in RNF4 pin.

The selection of drive mode for ch1 to ch4 is set using serial function. (See the serial settings of the drive mode in each channel; p.13/32 and p.15/32)

## (a) Constant-Voltage mode (ch1 to ch4)

Output high voltage;  $V_{VOHx}[V] = 8 \times V_{DACx}[V]$  ( $8 \times V_{DACx} \leq VM[V]$ ,  $x = 1, 2, 3, \text{ and } 4$ )  $\dots\dots(1)$

$V_{VOHx}[V] = VM[V]$  ( $8 \times V_{DACx} > VM[V]$ ,  $x = 1, 2, 3, \text{ and } 4$ )  $\dots\dots(2)$

D/A Converter setting value;  $8 \times V_{DACx}[V] = 1.5 \text{ to } 4.725$  ( $DACx = 6'b01\_0100 \text{ to } 6'b11\_1111$ ,  $x = 1, 2, 3, \text{ and } 4$ )

In the ch4, set DACI4 = 6'b11\_1111.

## (b) Constant-Current mode (ch4 and ch5)

Output current;  $I_{outx}[A] = V_{DACx}[V] \div (R_{METALx}[\Omega] + R_{RNFx}[\Omega])$  ( $x = 4 \text{ and } 5$ )  $\dots\dots(3)$

D/A Converter setting value;  $V_{DACx}[V] = 0.05 \text{ to } 0.315$  ( $DACx = 6'b00\_1010 \text{ to } 6'b11\_1111$ ,  $x = 4 \text{ and } 5$ )

$R_{METALx}$ ; metal impedance of BD6370GUL's inside (ch4;  $R_{METAL4}[\Omega] = 0.004$ (Typ.), ch5;  $R_{METAL5}[\Omega] = 0.022$ (Typ.))

$R_{RNFx}$ ; Resistance to connect RNFx pin for output current detection

In the ch4, set DACV4 = 6'b11\_1111.

## (c) Full-ON mode (ch1 to ch4)

D/A Converter setting value;  $DACx = 6'b11\_1111$  ( $x = 1, 2, 3, 4, \text{ and } 5$ )

4) Serial Input (BD6370GUL; STROBE, SCLK, and SDATA)

(1) Function Explanation

The BD6370GUL provides a 3-line serial interface for setting output modes and D/A converters.

SDATA is sent to the internal shift register during the STROBE low interval at the SCLK rising edge. Shift register data (Bit[B] to Bit[0]) is written to the IC's internal 12-bit memory at the STROBE rising edge, according to the addresses stored in Bit[E], Bit[D], and Bit[C]. The serial data input order is Bit[E] to Bit[0].

In the case of the resemblance drive mode (MODE13=1 and/or MODE23=1), input the serial data to be the same condition of DAC12 and DAC3.

Be cancelled power saving mode after turned on power supply VCC and VM. Serial settings are reset when the PS pin changes to Low-level control voltage, because of PS terminal combines power saving with serial reset function. Serial settings are also reset when the UVLO or TSD circuit operates.

Fig.42 Sequence of Serial Control Input

(2) Serial Register Bit Map

Bit Map is consisted of 5 addresses and 60 data. It is the prohibited bit of MODExx input. Don't input the prohibited bit at all times. A low level should be input to the TEST bit at all times. A high signal may cause the IC to malfunction.

(a) The Prohibited Input of MODE Bit

(MODE45, MODE34, MODE23, MODE13) = (0, 0, 0, 1), (0, 0, 1, 0), (0, 0, 1, 1), (1, 0, 0, 1), (1, 0, 1, 0), (1, 0, 1, 1), (1, 1, 0, 0), (1, 1, 0, 1), (1, 1, 1, 0), (1, 1, 1, 1)

BD6370GUL Serial Register Bit Map

No.	ADDRESS BIT			DATA BIT

1	0	0	0	OUT5A-OUT5B	OUT3A-OUT3B	OUT2A-OUT2B	OUT1A-OUT1B	OUT4A, OUT4B	6
1	0	0	1	OUT5A-OUT5B	OUT3B	OUT2A-OUT2B	OUT1A-OUT3A	OUT1B, OUT4A, OUT4B	-
1	0	1	0	OUT5A-OUT5B	OUT3A	OUT2A-OUT3B	OUT1A-OUT1B	OUT2B, OUT4A, OUT4B	-
1	0	1	1	OUT5A-OUT5B	don't care	OUT2A-OUT3B	OUT1A-OUT3A	OUT1B, OUT2B, OUT4A, OUT4B	-
1	1	0	0	don't care	don't care	OUT2A-OUT2B	OUT1A-OUT1B	OUT3A, OUT3B, OUT4A, OUT4B, OUT5A, OUT5B	-
1	1	0	1	don't care	don't care	OUT2A-OUT2B	OUT1A-OUT3A	OUT1B, OUT3B, OUT4A, OUT4B, OUT5A, OUT5B	-
1	1	1	0	don't care	don't care	OUT2A-OUT3B	OUT1A-OUT1B	OUT2B, OUT3A, OUT4A, OUT4B, OUT5A, OUT5B	-
1	1	1	1	don't care	don't care	OUT2A-OUT3B	OUT1A-OUT3A	OUT1B, OUT2B, OUT4A, OUT4B, OUT5A, OUT5B	-

Gray lines are prohibition serial bit; don't input their bits at all times

**ATTENTION in the case of resemblance drive mode (MODE23=1 and/or MODE13=1)**

MODE3B, MODE3A, IN3B, and IN3A bits are "don't care". Because OUT1A-OUT3A is driven by MODE12B, MODE12A, IN1B, and IN1A bits, and INPUT1 terminal control. In the same condition, MODE12B, MODE12A, IN2B, and IN2A bits, and INPUT2 terminal drive OUT2A-OUT3B. And set the serial data as DAC12 = DAC3, if not, Output high voltage is different value between OUT1A and OUT3A, and/or OUT2A and OUT3B.

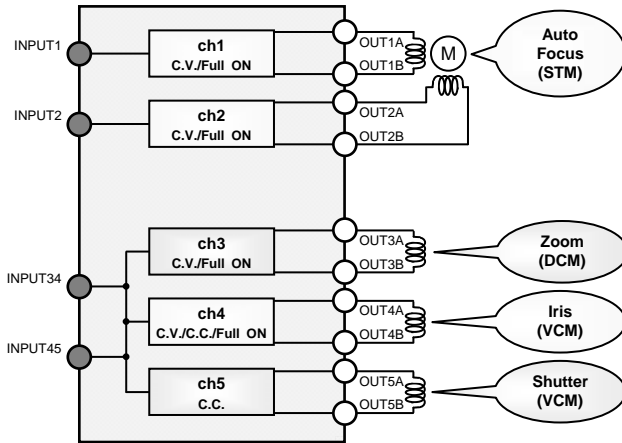

Fig.43 Example of Standard Model (ref No. 1, 2, and 6)

Fig.44 Example of High Performance Model (ref No.2 and 5)

Fig.45 Example of Standard Model and 1 Actuator (ref No.3 and 6)

Fig.46 Example of Standard Model and 1 Actuator (ref No.4 and 6)

C.V.=Constant-Voltage drive mode, Full ON=Full-ON drive mode, and C.C.=Constant-Current drive mode  
 STM=Stepping Motor, DCM=DC Motor, and VCM=Voice Coil Motor

Examples of Applications above are typical. BD6370GUL is not limited to these applications.

(2) ADDRESS BIT [001] Function Explanation

(5) ADDRESS BIT [100] Function Explanation

No.	ADDRESS BIT			DATA BIT											
	Bit[E]	Bit[D]	Bit[C]	Bit[B]	Bit[A]	Bit[9]	Bit[8]	Bit[7]	Bit[6]	Bit[5]	Bit[4]	Bit[3]	Bit[2]	Bit[1]	Bit[0]
04H	1	0	0	TEST	TEST	IN5B	IN5A	IN4B	IN4A	IN3B	IN3A	IN2B	IN2A	IN1B	IN1A

- (a) TEST; test bit for shipment inspection  
A low signal should be input to the TEST bit at all times. A high signal may cause the IC to malfunction.
- (b) IN5B to IN1A; control input mode select for ch1 to ch5, respectively  
Refer to I/O Truth Table (p.21/32 to p.23/32) for the detail logic of IN1A to IN5B.

## 6) I/O Truth Table (BD6370GUL)

## (1) I/O truth table for ch1 and ch2, in the case of MODE13=0, MODE23=0 (x=1 or 2)

Serial interface input bit				Terminal	Output terminal		MODE
MODE12B	MODE12A	INxB	INxA	INPUTx	OUTxA	OUTxB	
PWM Drive Mode by INPUTx terminal							
0	0	0	0	X	Z	Z	OFF
0	0	0	1	L	L	L	Brake
0	0	0	1	H	H	L	CW
0	0	1	0	L	L	L	Brake
0	0	1	0	H	L	H	CCW
0	0	1	1	X	L	L	Brake
PWM Drive Mode by INPUTx terminal							
0	1	0	0	X	Z	Z	OFF
0	1	0	1	L	H	L	CW
0	1	0	1	H	L	L	Brake
0	1	1	0	L	L	H	CCW
0	1	1	0	H	L	L	Brake
0	1	1	1	X	L	L	Brake
CW / CCW Drive Mode by INPUTx terminal							
1	0	X	0	X	Z	Z	OFF
1	0	0	1	L	L	H	CCW
1	0	0	1	H	H	L	CW
1	0	1	1	X	L	L	Brake
CW / CCW Drive Mode by INPUTx terminal							
1	1	X	0	X	Z	Z	OFF
1	1	0	1	L	H	L	CW
1	1	0	1	H	L	H	CCW
1	1	1	1	X	L	L	Brake

H; High level, L; Low level, Z; Hi impedance, X; Don't care

At CW, current flows from OUTxA to OUTxB. At CCW, current flows from OUTxB to OUTxA.

## (2) I/O truth table for ch3, in the case of MODE34=0, MODE13=0, and MODE23=0

Serial interface input bit				Terminal	Output terminal		MODE
MODE3B	MODE3A	IN3B	IN3A	INPUT34	OUT3A	OUT3B	
PWM Drive Mode by INPUT34 terminal							
0	0	0	0	X	Z	Z	OFF
0	0	0	1	L	L	L	Brake
0	0	0	1	H	H	L	CW
0	0	1	0	L	L	L	Brake
0	0	1	0	H	L	H	CCW
0	0	1	1	X	L	L	Brake
PWM Drive Mode by INPUT34 terminal							
0	1	0	0	X	Z	Z	OFF
0	1	0	1	L	H	L	CW
0	1	0	1	H	L	L	Brake
0	1	1	0	L	L	H	CCW
0	1	1	0	H	L	L	Brake
0	1	1	1	X	L	L	Brake
CW / CCW Drive Mode by INPUT34 terminal							
1	0	X	0	X	Z	Z	OFF
1	0	0	1	L	L	H	CCW
1	0	0	1	H	H	L	CW
1	0	1	1	X	L	L	Brake
CW / CCW Drive Mode by INPUT34 terminal							
1	1	X	0	X	Z	Z	OFF
1	1	0	1	L	H	L	CW
1	1	0	1	H	L	H	CCW
1	1	1	1	X	L	L	Brake

H; High level, L; Low level, Z; Hi impedance, X; Don't care

At CW, current flows from OUT3A to OUT3B. At CCW, current flows from OUT3B to OUT3A.

## (3) I/O truth table for ch1, ch3, in the case of MODE13=1 (OUT1A-OUT3A resemblance drive mode)

Serial interface input bit				Terminal INPUT1	Output terminal		MODE
MODE12B	MODE12A	IN1B	IN1A		OUT1A	OUT3A	
PWM Drive Mode by INPUT1 terminal							
0	0	0	0	X	Z	Z	OFF
0	0	0	1	L	L	L	Brake
0	0	0	1	H	H	L	CW
0	0	1	0	L	L	L	Brake
0	0	1	0	H	L	H	CCW
0	0	1	1	X	L	L	Brake
PWM Drive Mode by INPUT1 terminal							
0	1	0	0	X	Z	Z	OFF
0	1	0	1	L	H	L	CW
0	1	0	1	H	L	L	Brake
0	1	1	0	L	L	H	CCW
0	1	1	0	H	L	L	Brake
0	1	1	1	X	L	L	Brake
CW / CCW Drive Mode by INPUT1 terminal							
1	0	X	0	X	Z	Z	OFF
1	0	0	1	L	L	H	CCW
1	0	0	1	H	H	L	CW
1	0	1	1	X	L	L	Brake
CW / CCW Drive Mode by INPUT1 terminal							
1	1	X	0	X	Z	Z	OFF
1	1	0	1	L	H	L	CW
1	1	0	1	H	L	H	CCW
1	1	1	1	X	L	L	Brake

H; High level, L; Low level, Z; Hi impedance, X; Don't care, OUT1B; Hi impedance  
At CW, current flows from OUT1A to OUT3A. At CCW, current flows from OUT3A to OUT1A.

## (4) I/O truth table for ch2, ch3, in the case of MODE23=1 (OUT2A-OUT3B resemblance drive mode)

Serial interface input bit				Terminal INPUT2	Output terminal		MODE
MODE12B	MODE12A	IN2B	IN2A		OUT2A	OUT3B	
PWM Drive Mode by INPUT2 terminal							
0	0	0	0	X	Z	Z	OFF
0	0	0	1	L	L	L	Brake
0	0	0	1	H	H	L	CW
0	0	1	0	L	L	L	Brake
0	0	1	0	H	L	H	CCW
0	0	1	1	X	L	L	Brake
PWM Drive Mode by INPUT2 terminal							
0	1	0	0	X	Z	Z	OFF
0	1	0	1	L	H	L	CW
0	1	0	1	H	L	L	Brake
0	1	1	0	L	L	H	CCW
0	1	1	0	H	L	L	Brake
0	1	1	1	X	L	L	Brake
CW / CCW Drive Mode by INPUT2 terminal							
1	0	X	0	X	Z	Z	OFF
1	0	0	1	L	L	H	CCW
1	0	0	1	H	H	L	CW
1	0	1	1	X	L	L	Brake
CW / CCW Drive Mode by INPUT2 terminal							
1	1	X	0	X	Z	Z	OFF
1	1	0	1	L	H	L	CW
1	1	0	1	H	L	H	CCW
1	1	1	1	X	L	L	Brake

H; High level, L; Low level, Z; Hi impedance, X; Don't care, OUT2B; Hi impedance  
At CW, current flows from OUT2A to OUT3B. At CCW, current flows from OUT3B to OUT2A.

**ATTENTION in the case of resemblance drive mode (MODE23=1 and/or MODE13=1)**

MODE3B, MODE3A, IN3B, and IN3A bits are "don't care". Because OUT1A-OUT3A is driven by MODE12B, MODE12A, IN1B, and IN1A bits, and INPUT1 terminal control. In the same condition, MODE12B, MODE12A, IN2B, and IN2A bits, and INPUT2 terminal drive OUT2A-OUT3B. And set the serial data as DAC12 = DAC3, if not, Output high voltage is different value between OUT1A and OUT3A, and/or OUT2A and OUT3B.

(5) I/O truth table for ch4, in the case of MODE45=0 (if MODE34=0, then x=45, else then x=34)

Serial interface input bit				Terminal	Output terminal		MODE
MODE4B	MODE4A	IN4B	IN4A	INPUTx	OUT4A	OUT4B	
PWM Drive Mode by INPUTx terminal							
0	0	0	0	X	Z	Z	OFF
0	0	0	1	L	L	L	Brake
0	0	0	1	H	H	L	CW
0	0	1	0	L	L	L	Brake
0	0	1	0	H	L	H	CCW
0	0	1	1	X	L	L	Brake
PWM Drive Mode by INPUTx terminal							
0	1	0	0	X	Z	Z	OFF
0	1	0	1	L	H	L	CW
0	1	0	1	H	L	L	Brake
0	1	1	0	L	L	H	CCW
0	1	1	0	H	L	L	Brake
0	1	1	1	X	L	L	Brake
CW / CCW Drive Mode by INPUTx terminal							
1	0	X	0	X	Z	Z	OFF
1	0	0	1	L	L	H	CCW
1	0	0	1	H	H	L	CW
1	0	1	1	X	L	L	Brake
CW / CCW Drive Mode by INPUTx terminal							
1	1	X	0	X	Z	Z	OFF
1	1	0	1	L	H	L	CW
1	1	0	1	H	L	H	CCW
1	1	1	1	X	L	L	Brake

H; High level, L; Low level, Z; Hi impedance, X; Don't care

At CW, current flows from OUT4A to OUT4B. At CCW, current flows from OUT4B to OUT4A.

(6) I/O truth table for ch5, in the case of MODE45=1, MODE34=0 (or MODE45=0, MODE34=1)

Serial interface input bit				Terminal	Output terminal		MODE
MODE5B	MODE5A	IN5B	IN5A	INPUT45	OUT5A	OUT5B	
PWM Drive Mode by INPUT45 terminal							
0	0	0	0	X	Z	Z	OFF
0	0	0	1	L	L	L	Brake
0	0	0	1	H	H	L	CW
0	0	1	0	L	L	L	Brake
0	0	1	0	H	L	H	CCW
0	0	1	1	X	L	L	Brake
PWM Drive Mode by INPUT45 terminal							
0	1	0	0	X	Z	Z	OFF
0	1	0	1	L	H	L	CW
0	1	0	1	H	L	L	Brake
0	1	1	0	L	L	H	CCW
0	1	1	0	H	L	L	Brake
0	1	1	1	X	L	L	Brake
CW / CCW Drive Mode by INPUT45 terminal							
1	0	X	0	X	Z	Z	OFF
1	0	0	1	L	L	H	CCW
1	0	0	1	H	H	L	CW
1	0	1	1	X	L	L	Brake
CW / CCW Drive Mode by INPUT45 terminal							
1	1	X	0	X	Z	Z	OFF
1	1	0	1	L	H	L	CW
1	1	0	1	H	L	H	CCW
1	1	1	1	X	L	L	Brake

H; High level, L; Low level, Z; Hi impedance, X; Don't care

At CW, current flows from OUT5A to OUT5B. At CCW, current flows from OUT5B to OUT5A.

7) The More Precise Constant-Current Settings (BD6370GUL)

Regarding Constant-Current Drive blocks (ch4 and ch5), there is the metal impedance of each RNF in BD6370GUL inside: 4mΩ (Typ.) and 22mΩ (Typ.), respectively. Then the metal impedances and the board patterning impedances of RNF4 and RNF5 lines considered, set each D/A Converter to drive the actuator in the more precise constant current.

Fig.47 Metal Impedance and Board Patterning Impedance of Constant-Current block

The more correct D/A Converter settings of Constant-Current H-bridge (ch4 and ch5)

$$\text{Output current value; } I_{OUTx}[A] = V_{DACx}[V] \div (R_{RNFx}[\Omega] + R_{METALx}[\Omega] + R_{WX_{1}}[\Omega] + R_{WX_{2}}[\Omega])$$

(ex.) If there are  $V_{DACx}=0.1[V]$ ,  $R_{RNFx}=0.5[\Omega]$ , and  $R_{WX_{1}} + R_{WX_{2}}=0[\Omega]$  (the ideal patterning condition), then

$$\text{Output current value (ch4); } I_{OUT4}[A] = 0.1[V] \div (0.5[\Omega] + 0.004[\Omega] + 0[\Omega]) = \mathbf{0.198}$$

$$\text{Output current value (ch5); } I_{OUT5}[A] = 0.1[V] \div (0.5[\Omega] + 0.022[\Omega] + 0[\Omega]) = \mathbf{0.191}$$

Else if there are  $V_{DACx}=0.1[V]$ ,  $R_{RNFx}= 0.5[\Omega]$ , and  $R_{WX_{1}} + R_{WX_{2}}=0.05[\Omega]$  (the more closely real patterning condition; the value is different to the patterning), then

$$\text{Output current value (ch4); } I_{OUT4}[A] = 0.1[V] \div (0.5[\Omega] + 0.004[\Omega] + 0.05[\Omega]) = \mathbf{0.181}$$

$$\text{Output current value (ch5); } I_{OUT5}[A] = 0.1[V] \div (0.5[\Omega] + 0.022[\Omega] + 0.05[\Omega]) = \mathbf{0.175}$$

The above Sequence is one example. BD6370GUL is not limited to this sequence.

### ●BD6758MWV and BD6758KN Function Explanation

Fig.50 BD6758MWV / KN Application Circuit Diagram

#### 1) Power-saving function (BD6758MWV / KN)

When Low-level voltage is applied to PS pin, the IC will be turned off internally and the circuit current will be 0μA (Typ.). During operating mode, PS pin should be High-level. (See the Electrical Characteristics; p.6/32)

#### 2) Control input (BD6758MWV / KN)

##### (1) INxA, INxB, EN1 and IN5 pins

These pins are used to program and control the motor drive modes. (See the Electrical Characteristics; p.6/32 and I/O Truth Table; p.28/32)

##### (2) SELx pins

When the Low-level voltage is applied to the SEL pin, the I/O logic can be set to EN/IN mode. However, when the High-level voltage is applied, the I/O logic can be set to IN/IN mode. (See the Electrical Characteristics; p.6/32 and I/O Truth Table; p.28/32)

##### (3) BRKx pins

Applying the High-level voltage to the BRKx pin will set the brake mode. (See the Electrical Characteristics; p.6/32 and I/O Truth Table; p.28/32)

#### 3) H-bridge (BD6758MWV / KN)

The 5-channel H-bridges can be controlled independently. For this reason, it is possible to drive the H-bridges simultaneously, as long as the package thermal tolerances are not exceeded.

The H-bridge output transistors of BD6758MWV and BD6758KN are Power CMOS Drivers. The total H-bridge ON-Resistance on the high and low sides varies with the VM voltage. The system must be designed so that the maximum H-bridge current for each channel is 800mA or below. (See the Operating Conditions; p.2/32)

## 4) Drive system of Linear Constant-Current H-bridge (BD6758MWV / KN: ch5)

BD6758MWV / KN (ch5) enable Linear Constant-Current Driving.

(1) Reference voltage output (with a tolerance of  $\pm 3\%$ )

The VREF pin outputs 1.2V, based on the internal reference voltage. The output current of the Constant-Current Drive block is controllable by connecting external resistance to the VREF pin of the IC and applying a voltage divided by the resistor to the output current setting pins (VLIM pin). It is recommended to set the external resistance to 2k $\Omega$  or above in consideration of the current capacity of the VREF pin, and 20k $\Omega$  or below in order to minimize the fluctuation of the set value caused by the base current of the internal transistor of the IC.

## (2) Output current detection and current settings

By connecting external resistor (0.1 $\Omega$  to 5.0 $\Omega$ ) to the RNF pin of the IC, the motor drive current will be converted into voltage in order to be detected. The output current is kept constant by shorting the RNF and SENSE pins and comparing the voltage with the VLIM voltage. To perform output current settings more precisely, trim the external RNF resistance if needed, and supply a precise voltage externally to the VLIM pin of the IC. In that case, open the VREF pin.

$$\text{Output current value} = \frac{\text{VLIM[V]}}{\text{RNF}[\Omega]}$$

The output current is 400mA $\pm 3\%$  if 0.2V is applied to the VLIM pin and a 0.5 $\Omega$  resistor is connected externally to the RNF pin.

If the VLIM pin is shorted to the VCC pin (or the same voltage level as the VCC is applied) and the SENSE and RNF pins are shorted to the ground, this channel can be used as a Full-ON Drive H-bridge like the other four channels of BD6758KN.

## 5) I/O truth table (BD6758MWV / KN)

BD6758MWV / KN Full-ON Driver ch1 and ch2 I/O Truth Table

Drive mode	INPUT			OUTPUT		Output mode
	SEL1	INxA	INxB	OUTxA	OUTxB	
EN/IN	L	H	X	Z	Z	Standby
		L	L	H	L	CW
		L	H	L	H	CCW
IN/IN	H	L	L	Z	Z	Standby
		H	L	H	L	CW
		L	H	L	H	CCW
		H	H	L	L	Brake

L: Low, H: High, X: Don't care, Z: High impedance

At CW, current flows from OUTA to OUTB. At CCW, current flows from OUTB to OUTA.

BD6758MWV / KN Full-ON Driver ch3 and ch4 I/O Truth Table

Drive mode	INPUT				OUTPUT		Output mode
	SEL2	INxA	INxB	BRKx	OUTxA	OUTxB	
EN/IN	L	H	X	X	Z	Z	Standby
		L	L	L	H	L	CW
		L	H	L	L	H	CCW
		L	X	H	L	L	Brake
IN/IN	H	L	L	X	Z	Z	Standby
		H	L	X	H	L	CW
		L	H	X	L	H	CCW
		H	H	X	L	L	Brake

L: Low, H: High, X: Don't care, Z: High impedance

At CW, current flows from OUTA to OUTB. At CCW, current flows from OUTB to OUTA.

BD6758MWV / KN Linear Constant-Current Driver ch5 I/O Truth Table

Drive mode	INPUT		OUTPUT		Output mode
	EN1	IN5	OUT5A	OUT5B	
EN/IN	H	X	Z	Z	Standby
	L	L	H	L	CW
	L	H	L	H	CCW

L: Low, H: High, X: Don't care, Z: High impedance

At CW, current flows from OUTA to OUTB. At CCW, current flows from OUTB to OUTA.

● I/O Circuit Diagram

Fig.51 BD6370GUL I/O Circuit Diagram (Resistance values are typical ones)

Fig.52 BD6758MWV / KN I/O Circuit Diagram (Resistance values are typical ones)

● Notes for use

- 1) Absolute maximum ratings  
Use of the IC in excess of absolute maximum ratings such as the applied voltage or operating temperature range may result in IC damage. Assumptions should not be made regarding the state of the IC (short mode or open mode) when such damage is suffered. The implementation of a physical safety measure such as a fuse should be considered when use of the IC in a special mode where the absolute maximum ratings may be exceeded is anticipated.
- 2) Storage temperature range  
As long as the IC is kept within this range, there should be no problems in the IC's performance. Conversely, extreme temperature changes may result in poor IC performance, even if the changes are within the above range.
- 3) Power supply pins and lines  
None of the VM line for the H-bridges is internally connected to the VCC power supply line, which is only for the control logic or analog circuit. Therefore, the VM and VCC lines can be driven at different voltages. Although these lines can be connected to a common power supply, do not open the power supply pin but connect it to the power supply externally.  
Regenerated current may flow as a result of the motor's back electromotive force. Insert capacitors between the power supply and ground pins to serve as a route for regenerated current. Determine the capacitance in full consideration of all the characteristics of the electrolytic capacitor, because the electrolytic capacitor may lose some capacitance at low temperatures. If the connected power supply does not have sufficient current absorption capacity, regenerative current will cause the voltage on the power supply line to rise, which combined with the product and its peripheral circuitry may exceed the absolute maximum ratings. It is recommended to implement a physical safety measure such as the insertion of a voltage clamp diode between the power supply and ground pins.  
For this IC with several power supplies and a part consists of the CMOS block, it is possible that rush current may flow instantaneously due to the internal powering sequence and delays, and to the unstable internal logic, respectively. Therefore, give special consideration to power coupling capacitance, width of power and ground wirings, and routing of wiring.
- 4) Ground pins and lines  
Ensure a minimum GND pin potential in all operating conditions. Make sure that no pins are at a voltage below the GND at any time, regardless of whether it is a transient signal or not.  
When using both small signal GND and large current MGND patterns, it is recommended to isolate the two ground patterns, placing a single ground point at the application's reference point so that the pattern wiring resistance and voltage variations caused by large currents do not cause variations in the small signal ground voltage. Be careful not to change the GND wiring pattern of any external components, either.  
The power supply and ground lines must be as short and thick as possible to reduce line impedance.
- 5) Thermal design  
Use a thermal design that allows for a sufficient margin in light of the power dissipation (Pd) in actual operating conditions.

- 6) Pin short and wrong direction assembly of the device  
Use caution when positioning the IC for mounting on printed circuit boards. The IC may be damaged if there is any connection error or if positive and ground power supply terminals are reversed. The IC may also be damaged if pins are shorted together or are shorted to other circuit's power lines.
- 7) Actions in strong magnetic field  
Use caution when using the IC in the presence of a strong magnetic field as doing so may cause the IC to malfunction.
- 8) ASO  
When using the IC, set the output transistor for the motor so that it does not exceed absolute maximum ratings or ASO.
- 9) Thermal shutdown circuit  
If the junction temperature ( $T_{jmax}$ ) reaches 175°C, the TSD circuit will operate, and the coil output circuit of the motor will open. There is a temperature hysteresis of approximately 25°C (BD6373GW and BD6873KN Typ.) and 25°C (BD6753KV Typ.). The TSD circuit is designed only to shut off the IC in order to prevent runaway thermal operation. It is not designed to protect the IC or guarantee its operation. The performance of the IC's characteristics is not guaranteed and it is recommended that the device is replaced after the TSD is activated.
- 10) Serial data input  
In the BD6370GUL, SDATA input string start with MSB first. A low level should be input to the TEST bit at all times. A high signal may cause the IC to malfunction. The serial settings are reset during standby mode operation and whenever the UVLO or TSD circuits are operating.  
It is the prohibited bit of MODExx input. Don't input the prohibited bit at all times. (See the Serial Register Bit Map; p.12/32)  
In the case of the resemblance drive mode (MODE13=1 and/or MODE23=1), MODE3B, MODE3A, IN3B, and IN3A bits are "don't care". Because OUT1A-OUT3A is driven by MODE12B, MODE12A, IN1B, and IN1A bits, and INPUT1 terminal control. In the same condition, MODE12B, MODE12A, IN2B, and IN2A bits, and INPUT2 terminal drive OUT2A-OUT3B. And set the serial data as DAC12 = DAC3, if not, Output high voltage is different value between OUT1A and OUT3A, and/or OUT2A and OUT3B. In the case of Full-ON mode for ch1 to ch3, input serial data of each Constant-Voltage setting D/A Converter (DAC12 and DAC3) to be full bits high.  
In the ch4, as it set Constant-Voltage mode, input serial data of Constant-Current setting D/A Converter (DAC14) to be full bits high. As it set Constant-Current mode, input serial data of Constant-Voltage setting D/A Converter (DACV4) to be full bits high, while as it set Full-ON mode, input serial data of both D/A Converters to be full bits high. In the settings of Constant-Voltage or Full-ON mode, no need to connect the external resistance for output current detection in RNF4 pin.
- 11) Power saving terminal  
Be cancelled power saving mode after turned on power supply VCC and VM, because of PS terminal combines power saving with serial reset function. If the case of power saving terminal always shorted power supply terminal, reset function may not be well, and it may cause the IC to malfunction.
- 12) Testing on application board  
When testing the IC on an application board, connecting a capacitor to a pin with low impedance subjects the IC to stress. Always discharge capacitors after each process or step. Always turn the IC's power supply off before connecting it to, or removing it from a jig or fixture, during the inspection process. Ground the IC during assembly steps as an antistatic measure. Use similar precaution when transporting and storing the IC.
- 13) Application example  
The application circuit is recommended for use. Make sure to confirm the adequacy of the characteristics. When using the circuit with changes to the external circuit constants, make sure to leave an adequate margin for external components including static and transitional characteristics as well as dispersion of the IC.
- 14) Regarding input pin of the IC  
This monolithic IC contains P<sup>+</sup> isolation and P substrate layers between adjacent elements to keep them isolated. P-N junctions are formed at the intersection of these P layers with the N layers of other elements, creating a parasitic diode or transistor. For example, the relation between each potential is as follows:  
When GND > Pin A, the P-N junction operates as a parasitic diode.  
When GND > Pin B, the P-N junction operates as a parasitic diode and transistor.  
Parasitic elements can occur inevitably in the structure of the IC. The operation of parasitic elements can result in mutual interference among circuits, operational faults, or physical damage. Accordingly, methods by which parasitic elements operate, such as applying a voltage that is lower than the GND (P substrate) voltage to an input pin, should not be used.

# Notice

## Precaution on using ROHM Products

- Our Products are designed and manufactured for application in ordinary electronic equipments (such as AV equipment, OA equipment, telecommunication equipment, home electronic appliances, amusement equipment, etc.). If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment <sup>(Note 1)</sup>, transport equipment, traffic equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASS III	CLASS III	CLASS II b	CLASS III
CLASS IV		CLASS III	

- ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
  - Installation of protection circuits or other protective devices to improve system safety
  - Installation of redundant circuits to reduce the impact of single or multiple circuit failure
- Our Products are designed and manufactured for use under standard conditions and not under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc. prior to use, must be necessary:
  - Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
  - Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
  - Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
  - Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
  - Sealing or coating our Products with resin or other coating materials
  - Use of our Products without cleaning residue of flux (even if you use no-clean type fluxes, cleaning residue of flux is recommended); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
  - Use of the Products in places subject to dew condensation
- The Products are not subject to radiation-proof design.
- Please verify and confirm characteristics of the final or mounted products in using the Products.
- In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse. is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
- De-rate Power Dissipation (Pd) depending on Ambient temperature (Ta). When used in sealed area, confirm the actual ambient temperature.
- Confirm that operation temperature is within the specified range described in the product specification.
- ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

## Precaution for Mounting / Circuit board design

- When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
- In principle, the reflow soldering method must be used; if flow soldering method is preferred, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

**Precautions Regarding Application Examples and External Circuits**

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

**Precaution for Electrostatic**

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of ionizer, friction prevention and temperature / humidity control).

**Precaution for Storage / Transportation**

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
  - [a] the Products are exposed to sea winds or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - [b] the temperature or humidity exceeds those recommended by ROHM
  - [c] the Products are exposed to direct sunshine or condensation
  - [d] the Products are exposed to high Electrostatic
2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.
3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

**Precaution for Product Label**

QR code printed on ROHM Products label is for ROHM's internal use only.

**Precaution for Disposition**

When disposing Products please dispose them properly using an authorized industry waste company.

**Precaution for Foreign Exchange and Foreign Trade act**

Since our Products might fall under controlled goods prescribed by the applicable foreign exchange and foreign trade act, please consult with ROHM representative in case of export.

**Precaution Regarding Intellectual Property Rights**

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data. ROHM shall not be in any way responsible or liable for infringement of any intellectual property rights or other damages arising from use of such information or data.:
2. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the information contained in this document.

**Other Precaution**

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

**General Precaution**

1. Before you use our Products, you are requested to carefully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of any ROHM's Products against warning, caution or note contained in this document.
2. All information contained in this document is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sales representative.
3. The information contained in this document is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate and/or error-free. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
