

## ADJUSTABLE-SPEED SINGLE-PHASE FULL-WAVE PRE-DRIVER FOR MOTOR

AM4967

**General Description**

The AM4967 is a single-coil, single-phase motor pre-driver designed by bipolar process. Its rotation speed can be controlled through an external PWM. This IC requires few external components and has the merit of high efficiency which make it suitable for use in great air volume, large current and high voltage applications.

The AM4967 is available in SSOP-16 package.

**Features**

- Single-phase Full-wave Pre-drive
- Rotation Speed Control via External PWM
- Maximum Operating Current Limit
- Linear Start Function for Reducing Large Current Impulse at the Moment of Turn-on
- Minimum Rotation Speed Setting
- Lock Protection and Auto Start Function
- Rotation Speed Indication
- Over Temperature Protection

**Application**

- CPU and OA (Office Automation) Cooler Fan
- Brushless DC Motor

**Pin Description**

Pin Number	Pin Name	Function
1	OUT2	Second channel P-type driver output. Open-drain output, must be connected with pull-up resistor to drive external power devices in operation
2	OUT2B	Second channel N-type driver output. Push-pull output to drive external power devices
3	VCC	Power supply
4	CS	Current limiter indicator. Fixed to 0.2V internally. Maximum allowable current is decided by external sample resistance. When the voltage of this pin exceeds 0.2V, the output will be shut down by current limit. If this function is not used, connect this pin to ground directly
5	VMIN	Minimum speed setting terminal. Connect it to VREF when disused. In case it is tied to other power supply for controlling, an isolated resistor is necessary
6	VPWM	Speed control terminal. It is full speed mode when connected to ground. If the speed is controlled by PWM mode, the frequency of control signal is 20kHz to 100kHz. Moreover, a low pass network is necessary to transfer PWM to DC level
7	COSC	PWM basic oscillation frequency generator when connected with a capacitor of 220pF. 30kHz frequency is available.
8	FG/RD	"FG" means pin 8 is an output pin of FG signal which is used for detecting rotation speed. "RD" means pin 8 is an output pin of RD signal, and is used for detecting fan rotate-stop state. "FG" and "RD" can be selected according to the requirement. This pin need to be connected with pull-up resistor when used. A new pulse will be generated once input signal changed. Keep this pin open when it is not to be used
9	HIN-	Hall sensor negative input. To prevent noise, this pin is recommended to be placed as close as possible to Hall circuit. If necessary, a capacitor may be added between HIN+ and HIN- to reduce the influence caused by noise
10	HIN+	Hall sensor positive input. To avoid noise, this pin is recommended to be placed as close as possible to Hall circuit
11	CT	Lock protection and auto start frequency generator. It is connected with an external 0.47μF capacitor which decides lock-rotate time and start time. If lock-rotate protection function is disused, please connect this pin to GND
12	LS	Linear start terminal. This pin is connected to VREF externally via a capacitor of 0.47μF to 1μF which enables fan start steadily. Start time is dependent to the capacitance. If linear start function is not used, connect this pin to ground
13	VREF	5V voltage reference
14	GND	Ground for circuit control
15	OUT1B	First channel N-type driver output. Push-pull output to drive external power devices
16	OUT1	First channel P-type driver output. Open-drain output, must be connected with pull-up resistor to drive external power devices in operation

## Truth Table

1. Driver-lock.  $V_{OSC}$  is High,  $V_{PWM}$ ,  $V_{VMIN}$  and  $V_{LS}$  are low.

HIN-	HIN+	CT	OUT1	OUT1B	OUT2	OUT2B	FG/RD	Mode
H	L	L	L	L	OFF	H	L	OUT1 → OUT2 (Driver)
L	H		OFF	H	L	L	OFF	OUT2 → OUT1 (Driver)
H	L	H	OFF	L	OFF	H	L	Lock Protection
L	H		OFF	H	OFF	L	OFF	

2. Speed control.  $V_{CT}$ ,  $V_{LS}$  are low.

VPWM, VMIN	COSC	HIN-	HIN+	OUT1	OUT1B	OUT2	OUT2B	Mode
L	H	H	L	L	L	OFF	H	OUT1 → OUT2 (Driver)
		L	H	OFF	H	L	L	OUT2 → OUT1 (Driver)
H	L	H	L	OFF	L	OFF	H	Regenerative
		L	H	OFF	H	OFF	L

## Operating Diagram

Figure 9. Operating Diagram 1 of AM4967 (Speed Control, Note 3)

### Note 3:

#### 1. Minimum Speed Setting Mode (Stop Mode)

When fan rotate at low speed, its lowest speed is settable by VMIN pin voltage. If not, fan motor stops.

#### 2. Low Speed to High Speed Setting Mode

PWM control system works by comparing the voltage of VPWM and COSC (1.0V to 3.0V). When VPWM voltage is low, the transistors of the upper and lower side outputs are ON. On contrary, when VPWM voltage is high, the upper side transistors are OFF. And coil current re-circulates in a lower side transistor. Therefore, as the VPWM

voltage becomes lower, output ON duty becomes large. Sequentially, coil current increases and the motor runs at high speed which is monitored by FG output while rotation-stop state is monitored by RD output.

#### 3. Full Speed Rotation Mode

When VPWM voltage drops to 1.0V or lower, motor fan will run at full speed. (If the speed is not controlled,  $V_{PWM}=GND$ )

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибуторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибуторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помочь разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
