

240 Watts

- Ultra Slim Design
- 150% Peak Load for 3 seconds
- Ambient Operation from -25 °C to +70 °C
- High Efficiency – Up to 92%
- Selectable Overload Characteristic
- Selectable Remote Inhibit or Enable
- 3 Year Warranty

Dimensions:

DSA240:
4.64 x 4.93 x 2.59" (117.8 x 125.2 x 65.8 mm)

Notes

1. Typical efficiency at 230 VAC and full load.
2. Peak load is for a maximum of 3 s, see Application Notes. Average power is not to exceed nominal output power.
3. Output current should be limited so that nominal output power is not exceeded.

Derating Curves

DC OK

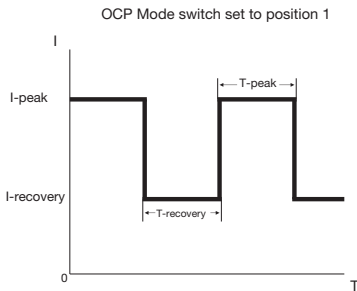

Open = Output fail, if voltage drops below 45% of nominal
 Closed = Output good

Contact Rating: 0.3 A at 60 VDC, 1.0 A at 30 VDC, 0.5 A at 30 VAC.
 500 VDC isolation to output.

Application Notes

Peak Loading

The peak loading and overload characteristics can be programmed into one of two modes by appropriate selection of the OCP mode switch on the front panel.

A peak load of up-to 150% can be taken for a given duration. This duration depends on the percentage of peak load taken and can be determined by graph A below.

If the load is reduced to less than 100% of nominal either before or at the end of the duration, then there is a period of recovery needed to allow the power supply to cool down before the peak load can be re-applied. The time required for recovery depends on the amount of reduction of load and can be determined by graph B below.

However, if the peak load period exceeds the duration indicated by graph A the output will go into constant current mode for protection. The constant current value will be 105% of the nominal rating.

During constant current operation, if the output voltage should fall below 40% of the rated voltage then the output will turn off and try to restart for five times before turning off permanently. Once this has happened, the output will need to be reset by turning the AC mains off and on again.

A peak load of up-to 150% can be taken for a given duration. This duration depends on the percentage of peak load taken as described by graph A.

Once the peak load duration is exceeded, the output will turn off for 3-4 seconds before automatically restarting.

GRAPH B

Remote Control

The output can be controlled by applying a voltage between pin 3 of the DC output with respect to pin 4. The effect of the control is dependant upon the RC switch setting on the front panel.

If the switch is set to position 1 then the output can be disabled by applying a suitable voltage.

If the switch is set to position 2 then the output can be enabled by applying a voltage. In the range of 2.5 V to 9.0 V limited to 20 mA.

| Switch Position | Pin 3 Voltage with respect to Pin 4 | Output |
|-----------------|-------------------------------------|--------|
| 1 | <0.8 V or Open Circuit | ON |
| 1 | >2.5 V, <9.0 V | OFF |
| 2 | <0.8 V or Open Circuit | OFF |
| 2 | >2.5 V, <9.0 V | ON |

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
