

NCP4328

Secondary Side CV/CC Controller

The NCP4328 is a secondary side SMPS controller designed for use in applications which requires constant current and/or constant current regulation.

The NCP4328x consists of two OTA amplifiers for voltage and current loop regulation with precise internal voltage references. Outputs of OTAs are open drain type (OTAs sink current only).

The NCP4328B includes a LED driver pin implemented with an open drain MOSFET driven by a 1 kHz square wave with a 12.5% duty cycle working when VCC is above UVLO for indication purpose.

The NCP4328A is available in TSOP-5 package while the NCP4328B is available in TSOP-6 package.

Features

- Operating Input Voltage Range: 2.5 V to 36.0 V
- Supply current < 100 μ A
- $\pm 0.5\%$ Reference Voltage Accuracy ($T_J = 25^\circ\text{C}$)
- Constant Voltage and Constant Current (A versions) Control Loop
- Indication LED PWM Modulated Driver (NCP4328B)
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

Typical Applications

- Offline Adapters for Notebooks, Game Stations and Printers
- LED Lightening
- High Power AC-DC Converters for TVs, Set-Top Boxes, Monitors etc.

PIN FUNCTION DESCRIPTION

NCP4328A TSOP-5	NCP4328B TSOP-6	Pin Name	Description
1	1	VCC	Supply voltage pin
2	2	GND	Ground
5	6	VSNS	Output voltage sensing pin, connected to output voltage divider
4	4	ISNS	Current sensing input for output current regulation, connect it to shunt resistor in ground branch.
–	5	LED	PWM LED driver output. Connected to LED cathode with current define by external serial resistance
3	3	FBC	Output of current sinking OTA amplifiers driving feedback optocoupler's LED. Connect here compensation networks as well.

ABSOLUTE MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Input Voltage	V_{CC}	–0.3 to 40.0	V
FBC, LED Voltage	V_{FBC}, V_{LED}	–0.3 to $V_{CC} + 0.3$	V
VSNS, ISNS Voltage	V_{SNS}, V_{ISNS}	–0.3 to 10.0	V
LED Current	I_{LED}	10	mA
Thermal Resistance – Junction-to-Air (Note 1)	$R_{\theta JA}$	315	°C/W
Junction Temperature	T_J	–40 to 150	°C
Storage Temperature	T_{STG}	–55 to 150	°C
ESD Capability, Human Body Model (Note 2)	ESD_{HBM}	2000	V
ESD Capability, Machine Model (Note 2)	ESD_{MM}	250	V

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. 50 mm², 1.0 oz. Copper spreader.

2. This device series incorporates ESD protection and is tested by the following methods:

ESD Human Body Model tested per JESD22–A114F

ESD Machine Model tested per JESD22–A115C

Latchup Current Maximum Rating tested per JEDEC standard: JESD78D.

NCP4328

ELECTRICAL CHARACTERISTICS

$-40^{\circ}\text{C} \leq T_J \leq 125^{\circ}\text{C}$; $V_{CC} = 15\text{ V}$; unless otherwise noted. Typical values are at $T_J = +25^{\circ}\text{C}$.

Parameter	Test Conditions	Symbol	Min	Typ	Max	Unit
Maximum Operating Input Voltage		V_{CC}			36.0	V
VCC UVLO	V_{CC} rising	V_{CCUVLO}	3.3	3.5	3.7	V
	V_{CC} falling		2.3	2.5	2.7	
VCC UVLO Hysteresis		$V_{CCUVLOHYS}$	0.8	1.0		V
Quiescent Current	NCP4328A	I_{CC}		105	130	μA
	NCP4328B			115	140	

VOLTAGE CONTROL LOOP OTA

Transconductance	Sink current only	g_{mV}		1		S
Reference Voltage	$2.8\text{ V} \leq V_{CC} \leq 36.0\text{ V}$, $T_J = 25^{\circ}\text{C}$	V_{REF}	1.244	1.250	1.256	V
	$2.8\text{ V} \leq V_{CC} \leq 36.0\text{ V}$, $T_J = 0 - 85^{\circ}\text{C}$		1.240	1.250	1.264	
	$2.8\text{ V} \leq V_{CC} \leq 36.0\text{ V}$, $T_J = -40 - 125^{\circ}\text{C}$		1.230	1.250	1.270	
Sink Current Capability	$V_{FBC} > 1.5\text{ V}$	I_{SINKV}	2.5			mA
Inverting Input Bias Current	$V_{SNS} = V_{REF}$	I_{BIASV}	-100		100	nA

CURRENT CONTROL LOOP OTA

Transconductance	Sink current only	g_{mC}		3		S
Reference Voltage	$T_J = 25^{\circ}\text{C}$	V_{REFC}	61.2	62.5	63.8	mV
	$T_J = -20 - 85^{\circ}\text{C}$		60.5	62.5	64.5	
	$T_J = -40 - 125^{\circ}\text{C}$		60.0	62.5	65.0	
Sink Current Capability	$V_{FBC} > 1.5\text{ V}$	I_{SINKC}	2.5			mA
Inverting Input Bias Current	$I_{SNS} = V_{REFC}$	I_{BIASC}	-100		100	nA

LED DRIVER (NCP4328B Only)

Switching Frequency		f_{SWLED}		1		kHz
Duty Cycle	(Note 3)	D_{LED}	10.0	12.5	15.0	%
Switch Resistance	$I_{LED} = 5\text{ mA}$	R_{SW}		50		Ω

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

3. Guaranteed by design.

APPLICATION INFORMATION

Typical application circuit for NCP4328A is shown in Figures 15 and 16 shows typical application circuit for NCP4328B that includes internal LED driver for indication purpose.

Power Supply

The NCP4328 is designed to operate from a single supply up to 36 V. It starts to operate when V_{CC} voltage reaches 3.5 V and stops when V_{CC} voltage drops below 2.5 V. V_{CC} can be supplied by direct connection to the V_{OUT} voltage of the power supply. It is highly recommended to add a RC filter (R1 and C2) in series from V_{OUT} to V_{CC} pin to reduce voltage spikes and drops that are produced at the converter's output capacitors. Recommended values for this filter are 220 Ω and 1 μF.

Voltage Regulation Path

The output voltage is detected on the VSNS pin by the R3 and R4 voltage divider. This voltage is compared with the internal precise voltage reference. The voltage difference is amplified by g_{mV} of the transconductance amplifier. The amplifier output current is connected to the FBC pin. The compensation network is also connected to this pin to provide frequency compensation for the voltage regulation path. This FBC pin drives regulation optocoupler that provides regulation of primary side. The optocoupler is supplied via direct connection to V_{OUT} line through resistor R2.

Regulation information is transferred through the optocoupler to the primary side controller where its FB pin is usually pulled down to reduce energy transferred to secondary output.

The output voltage can be computed by Equation 1.

$$V_{OUT} = V_{REF} \frac{R3 + R4}{R4} \quad (\text{eq. 1})$$

Current Regulation

The output current is sensed by the shunt resistor R5 in series with the load. Voltage drop on R5 is compared with internal precise voltage reference V_{REFC} at I_{SNS} transconductance amplifier input.

Voltage difference is amplified by g_{mC} to output current of amplifier, connected to FBC pin. Compensation network is connected between this pin and I_{SNS} input to provide frequency compensation for current regulation path. Resistor R6 separates compensation network from sense resistor. Compensation network works into low impedance without this resistor that significantly decreases compensation network impact.

Current regulation point is set to current given by Equation 2.

$$I_{OUTLIM} = \frac{V_{REFC}}{R5} \quad (\text{eq. 2})$$

LED Driver (NCP4328B only)

LED driver is active when V_{CC} is higher than V_{CCMIN}. LED driver consists of an internal power switch controlled by a PWM modulated logic signal and an external current limiting resistor R9. LED current can be computed by Equation 3

$$I_{LED} = \frac{V_{OUT} - V_{F_LED}}{R9} \quad (\text{eq. 3})$$

PWM modulation is used to increase efficiency of LED.

For additional information, please contact your local Sales Representative

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
