2.5 V/3.3 V Multilevel Input to Differential LVPECL/LVNECL 1:2 Clock or Data Fanout Buffer/Translator

The NB6L11 is an enhanced differential 1:2 clock or data fanout buffer/translator. The device has the same pinout and is functionally equivalent to the LVEL11, EP11, LVEP11 devices. Moreover, the device is optimized for the systems that require LOW skew, LOW jitter and LOW power consumption.

Differential input can be configured to accept single-ended signal by applying an external reference voltage to unused complementary input pin. Input accept LVNECL, LVPECL, LVTTTL, LVCMOS, CML, or LVDS. The outputs are 800 mV ECL signals.
