## Features:

- **Compliance with SATA Interface**
  - Serial ATA Revision 3.1
  - SATA 6.0 Gbps
  - ATA-8 command set
  - Backward compatible with SATA 1.5/3.0 Gbps
- **Capacity**
  - 8, 16, 32, 64 GB
- **Performance\***
  - Interface burst read/write: 600 MB/sec
  - Sustained read: up to 500 MB/sec
  - Sustained write: up to 150 MB/sec
- **Flash Management**
  - Built-in hardware ECC
  - Static/dynamic wear-leveling
  - Flash bad-block management
  - S.M.A.R.T.
  - Power failure management
  - ATA secure erase
  - TRIM
- **NAND Flash Type: SLC**
- **Endurance**
  - 8 GB: 140 TBW
  - 16 GB: 280 TBW
  - 32 GB: 560 TBW
  - 64 GB: 1120 TBW
- **Temperature Range**
  - Operating:
    - Standard: 0°C to 70°C
    - Extended: -40°C to 85°C
  - Storage: -40°C to 100°C
- **Supply Voltage**
  - 3.3 V ± 5%
- **Power Consumption\***
  - Active mode: 440 mA
  - Idle mode: 105 mA
- **Connector Type**
  - 75-pin SATA-based M.2 module pinout
- **Form Factor**
  - M.2 2242 form factor
  - Dimensions: 42.00 x 22.00 x 3.65, unit: mm
- **Shock & Vibration\*\***
  - Shock: 1,500 G
  - Vibration: 15 G
- **MTBF: >2,000,000 hours**
- **SATA Power Management**
- **Device Sleep Mode (optional)**
- **RoHS Recast Compliant (complies with 2011/65/EU standard)**

\*Varies from capacities. The values for performances and power consumptions presented are typical and may vary depending on flash configurations or platform settings. The term idle refers to the standby state of the device.

\*\*Non-operating

---

## 1. General Description

Apacer P100 is the next generation modularized Solid State Drive (SSD) with the shape of all new M.2 form factor, with the aim to be the more suitable for mobile and compact computers with standard width at only 22.00 mm. P100 appears in M.2 2242 mechanical dimensions and is believed to be the leading add-in storage solution for future host computing systems.

The M.2 SSD is designed with SATA-based connector pinouts, providing full compliance with the latest SATA Revision 3.1 interface specifications. Aside from SATA compliance, P100 delivers exceptional performance and power efficiency. On the other hand, the extreme thin and light form factor makes P100 the ideal choice for mobile computing systems, which appears to be the trend in near future.

Regarding reliability, P100 is built with a powerful SATA controller that supports on-the-module ECC as well as efficient wear leveling scheme. Since it is operating under SATA 6.0 Gbps interface, P100 is provided with Apacer latest S.M.A.R.T. that are primarily oriented for the latest SATA interface SSD, for drive lifetime monitoring and analyzing.

## 2. Pin Assignments

This connector does not support hot plug capability. There are a total of 75 pins. 12 pin locations are used for mechanical key locations; this allows such a module to plug into both Key B and Key M connectors.

| Pin | Type          | Description  |
|-----|---------------|--|
| 1   | CONFIG_3      | Ground (according to M.2 configurations for SSD-SATA definition) |
| 2   | 3.3V          | Supply Pin, 3.3V   |
| 3   | GND           | Ground   |
| 4   | 3.3V          | Supply pin, 3.3V   |
| 5   | No connect    | No connect   |
| 6   | Not available | No connect (used for other purposes)                             |
| 7   | Not available | No connect (used for other purposes)                             |
| 8   | Not available | No connect (used for other purposes)                             |

## M.2 2242 Flash Drive APM2T42P100xxxGAN-XTX

| Pin | Type              | Description  |
|-----|-------------------|--|
| 9   | No connect        | No connect   |
| 10  | DAS/DSS           | Device Activity Signal/Disable Staggered Spin-up   |
| 11  | No connect        | No connect (used for other purposes)   |
| 12  | (removed for key) | Mechanical notch B   |
| 13  | (removed for key) | Mechanical notch B   |
| 14  | (removed for key) | Mechanical notch B   |
| 15  | (removed for key) | Mechanical notch B   |
| 16  | (removed for key) | Mechanical notch B   |
| 17  | (removed for key) | Mechanical notch B   |
| 18  | (removed for key) | Mechanical notch B   |
| 19  | (removed for key) | Mechanical notch B   |
| 20  | Not available     | No connect (used for other purposes)   |
| 21  | CONFIG_0          | Ground (according to M.2 configurations for SSD-SATA definition)                             |
| 22  | Not available     | No connect (used for other purposes)   |
| 23  | Not available     | No connect (used for other purposes)   |
| 24  | Not available     | No connect (used for other purposes)   |
| 25  | Not available     | No connect (used for other purposes)   |
| 26  | Not available     | No connect (used for other purposes)   |
| 27  | GND               | Ground   |
| 28  | Not available     | No connect (used for other purposes)   |
| 29  | PERn1             | Not used   |
| 30  | Not available     | No connect (used for other purposes)   |
| 31  | PERp1             | Not used   |
| 32  | Not available     | No connect (used for other purposes)   |
| 33  | GND               | Ground   |
| 34  | Not available     | No connect (used for other purposes)   |
| 35  | PETn1             | Not used   |
| 36  | Not available     | No connect (used for other purposes)   |
| 37  | PETp1             | Not used   |
| 38  | DEVSLP            | Device Sleep, input. If driven high the host is informing the SSD to enter a low power state |
| 39  | GND               | Ground   |
| 40  | Not available     | No connect (used for other purposes)   |
| 41  | SATA-Rx+          | Host receiver differential signal pair   |
| 42  | Not available     | No connect (used for other purposes)   |
| 43  | SATA-Rx-          | Host receiver differential signal pair   |

## M.2 2242 Flash Drive APM2T42P100xxxGAN-XTX

| Pin | Type              | Description  |
|-----|-------------------|--|
| 44  | Not available     | No connect (used for other purposes)                               |
| 45  | GND               | Ground   |
| 46  | Not available     | No connect (used for other purposes)                               |
| 47  | SATA-Tx-          | Host transmitter differential pair                                 |
| 48  | Not available     | No connect (used for other purposes)                               |
| 49  | SATA-Tx+          | Host transmitter differential pair                                 |
| 50  | PERST#            | Not used   |
| 51  | GND               | Ground   |
| 52  | CLKREQ#           | Not used   |
| 53  | REFCLKN           | Not used   |
| 54  | PEWAKE#           | Not used   |
| 55  | REFCLKP           | Not used   |
| 56  | MFG1              | Manufacturing pin. Use determined by vendor (no connect on a host) |
| 57  | GND               | Ground   |
| 58  | MFG2              | Manufacturing pin. Use determined by vendor (no connect on a host) |
| 59  | (removed for key) | Mechanical notch M   |
| 60  | (removed for key) | Mechanical notch M   |
| 61  | (removed for key) | Mechanical notch M   |
| 62  | (removed for key) | Mechanical notch M   |
| 63  | (removed for key) | Mechanical notch M   |
| 64  | (removed for key) | Mechanical notch M   |
| 65  | (removed for key) | Mechanical notch M   |
| 66  | (removed for key) | Mechanical notch M   |
| 67  | Not available     | No connect (used for other purposes)                               |
| 68  | SUSCLK            | Not used   |
| 69  | CONFIG_1          | Ground   |
| 70  | 3.3V              | Supply pin, 3.3V   |
| 71  | GND               | Ground   |
| 72  | 3.3V              | Supply pin, 3.3V   |
| 73  | GND               | Ground   |
| 74  | 3.3V              | Supply pin, 3.3V   |
| 75  | CONFIG_2          | Ground   |

## 3. Product Specifications

### 3.1 Capacity

Capacity specification of P100 is available as shown in Table 3-1. It lists the specific capacity and the default numbers of heads, sectors and cylinders for each product line.

**Table 3-1** Capacity Specifications

| Capacity | Total bytes*   | Cylinders | Heads | Sectors | Max LBA     |
|----------|----------------|-----------|-------|---------|-------------|
| 8 GB     | 8,012,390,400  | 15,525    | 16    | 63      | 15,649,200  |
| 16 GB    | 16,013,942,784 | 16,383    | 16    | 63      | 31,277,232  |
| 32 GB    | 32,017,047,552 | 16,383    | 16    | 63      | 62,533,296  |
| 64 GB    | 64,023,257,088 | 16,383    | 16    | 63      | 125,045,424 |

\*Display of total bytes varies from file systems, which means not all of the bytes can be used for storage.

\*\*Notes: 1 GB = 1,000,000,000 bytes; 1 sector = 512 bytes.

LBA count addressed in the table above indicates total user storage capacity and will remain the same throughout the lifespan of the device. However, the total usable capacity of the SSD is most likely to be less than the total physical capacity because a small portion of the capacity is reserved for device maintenance usages.

### 3.2 Performance

Performances of P100 are listed below in Table 3-2.

**Table 3-2** Performance

| Performance \ Capacity        | 8 GB                         | 16 GB | 32 GB | 64 GB |
|-------------------------------|------------------------------|-------|-------|-------|
|                               | <b>Sustained read (MB/s)</b> | 285   | 500   | 500   |
| <b>Sustained write (MB/s)</b> | 85                           | 145   | 150   | 150   |

Note: Results may differ from various flash configurations or host system setting.

---

### 3.3 Environmental Specifications

---

Environmental specification of P100 series follows MIL-STD-810, as shown in Table 3-3.

**Table 3-3** Environmental Specifications

| Item        | Specifications   |
|-------------|--|
| Temperature | 0°C to 70°C (Operating) / -40°C to 85°C (Extended)                   |
|             | -40°C to 85°C (in storage)   |
| Shock       | 1,500G, 0.5ms  |
| Vibration   | 20Hz~80Hz/1.52mm (frequency/displacement)                            |
|             | 80Hz~2000Hz/20G (frequency/displacement)<br>X, Y, Z axis/60mins each |
| Drop        | 80cm free fall, 6 face of each                                       |
| Bending     | ≥20N, hold 1min/5times   |
| Torque      | 0.5N-m or 5deg, hold 5min/5times                                     |
| ESD         | Pass   |

### 3.4 Mean Time Between Failures (MTBF)

---

Mean Time Between Failures (MTBF) is predicted based on reliability data for the individual components in P100. The prediction result for P100 is more than 2,000,000 hours.

Note: The MTBF is predicated and calculated based on “Telcordia Technologies Special Report, SR-332, Issue 2” method.

### 3.5 Certification and Compliance

---

P100 complies with the following standards:

- CE
- FCC
- RoHS Recast
- MIL-STD-810
- BSMI

---

## 4. Flash Management

### 4.1 Error Correction/Detection

---

P100 implements a hardware ECC scheme, based on the BCH algorithm. It can detect and correct up to 72 bits error in 1K bytes.

### 4.2 Bad Block Management

---

Bad blocks are blocks that include one or more invalid bits, and their reliability is not guaranteed. Blocks that are identified and marked as bad by the manufacturer are referred to as “Initial Bad Blocks”. Bad blocks that are developed during the lifespan of the flash are named “Later Bad Blocks”. Apacer implements an efficient bad block management algorithm to detect the factory-produced bad blocks and manages any bad blocks that appear with use. This practice further prevents data being stored into bad blocks and improves the data reliability.

### 4.3 Wear Leveling

---

NAND flash devices can only undergo a limited number of program/erase cycles, and in most cases, the flash media are not used evenly. If some areas get updated more frequently than others, the lifetime of the device would be reduced significantly. Thus, Wear Leveling is applied to extend the lifespan of NAND flash by evenly distributing write and erase cycles across the media.

Apacer provides advanced Wear Leveling algorithm, which can efficiently spread out the flash usage through the whole flash media area. Moreover, by implementing both dynamic and static Wear Leveling algorithms, the life expectancy of the NAND flash is greatly improved.

### 4.4 Power Failure Management

---

Power Failure Management plays a crucial role when experiencing unstable power supply. Power disruption may occur when users are storing data into the SSD. In this urgent situation, the controller would run multiple write-to-flash cycles to store the metadata for later block rebuilding. This urgent operation requires about several milliseconds to get it done. At the next power up, the firmware will perform a status tracking to retrieve the mapping table and resume previously programmed NAND blocks to check if there is any incompleteness of transmission.

### 4.5 ATA Secure Erase

---

ATA Secure Erase is a standard ATA command and will write all “0xFF” to fully wipe all the data on hard drives and SSDs. When this command is issued, the SSD controller will empty its storage blocks and return to its factory default settings.

### 4.6 TRIM

---

TRIM is a feature which helps improve the read/write performance and speed of solid-state drives (SSD). Unlike hard disk drives (HDD), SSDs are not able to overwrite existing data, so the available space gradually becomes smaller with each use. With the TRIM command, the operating system can inform the SSD which blocks of data are no longer in use and can be removed permanently. Thus, the SSD will perform the erase action, which prevents unused data from occupying blocks all the time.

---

## 4.7 SATA Power Management

---

By complying with SATA 6.0 Gb/s specifications, the SSD supports the following SATA power saving modes:

- ACTIVE: PHY ready, full power, Tx & Rx operational
- PARTIAL: Reduces power, resumes in under 10  $\mu$ s (microseconds)
- SLUMBER: Reduces power, resumes in under 10 ms (milliseconds)
- HIPM: Host-Initiated Power Management
- DIPM: Device-Initiated Power Management
- AUTO-SLUMBER: Automatic transition from partial to slumber.
- Device Sleep (DevSleep or DEVSLP): PHY powered down; power consumption  $\leq$  5 mW; host assertion time  $\leq$  10 ms; exit timeout from this state  $\leq$  20 ms (unless specified otherwise in SATA Identify Device Log).

Note:

1. The behaviors of power management features would depend on host/device settings.
2. Device Sleep mode is optional, depending on product ordering selections.

## 4.8 Endurance

---

The endurance of a storage device is predicted by Tera Bytes Written based on several factors related to usage, such as the amount of data written into the drive, block management conditions, and daily workload for the drive. Thus, key factors, such as Write Amplifications and the number of P/E cycles, can influence the lifespan of the drive.

| Capacity | Tera Bytes Written |
|----------|--------------------|
| 8 GB     | 140                |
| 16 GB    | 280                |
| 32 GB    | 560                |
| 64 GB    | 1120               |

Notes:

- The measurement assumes the data written to the SSD for test is under a typical and constant rate.
- The measurement follows the standard metric: 1 TB (Terabyte) = 1,000 GB.
- This estimation complies with JEDEC JESD-219, enterprise endurance workload of random data with payload size distribution.

## 5. Software Interface

### 5.1 Command Set

This section defines the software requirements and the format of the commands the host sends to P100. Commands are issued to P100 by loading the required registers in the command block with the supplied parameters, and then writing the command code to the Command register.

Table 5-1 Command Set

| Command                           | Code    | Command                 | Code |
|-----------------------------------|---------|-------------------------|------|
| NOP                               | 00h     | Idle                    | 97h  |
| Data Set Management               | 06h     | Check Power Mode        | 98h  |
| Recalibrate                       | 10f-1Fh | Sleep                   | 99h  |
| Read Sectors                      | 20h     | SMART                   | B0h  |
| Read Sectors without Retry        | 21h     | Device Configuration    | B1h  |
| Read Sectors EXT                  | 24h     | Read Multiple           | C4h  |
| Read DMA EXT                      | 25h     | Write Multiple          | C5h  |
| Read Native Max Address EXT       | 27h     | Set Multiple Mode       | C6h  |
| Read Multiple EXT                 | 29h     | Read DMA                | C8h  |
| Read Log EXT                      | 2Fh     | Read DMA without Retry  | C9h  |
| Write Sectors                     | 30h     | Write DMA               | CAh  |
| Write Sectors Without Retry       | 31h     | Write DMA without Retry | CBh  |
| Write Sectors EXT                 | 34h     | Write Multiple FUA EXT  | CEh  |
| Write DMA EXT                     | 35h     | Standby Immediate       | E0h  |
| Set Native Max Address EXT        | 37h     | Idle Immediate          | E1h  |
| CFA Write Sectors without erase   | 38h     | Standby                 | E2h  |
| Write Multiple EXT                | 39h     | Idle                    | E3h  |
| Write DMA FUA EXT                 | 3Dh     | Read Buffer             | E4h  |
| Write Long EXT                    | 3Fh     | Check Power Mode        | E5h  |
| Read Verify Sectors               | 40h     | Sleep                   | E6h  |

| Standby Immediate      | 94h  | Security Disable Password | F6h  |
| Idle Immediate         | 95h  | Read Native Max Address   | F8h  |
| Standby                | 96h  | Set Max Address           | F9h  |

### 5.2 S.M.A.R.T.

---

SMART, an acronym for Self-Monitoring, Analysis and Reporting Technology, is an open standard that allows a hard disk drive to automatically detect its health and report potential failures. When a failure is recorded by SMART, users can choose to replace the drive to prevent unexpected outage or data loss. Moreover, SMART can inform users of impending failures while there is still time to perform proactive actions, such as copy data to another device.

---

## 6. Electrical Specifications

Table 6-1 Operating Range

|                     |                          |
|---------------------|--------------------------|
| Ambient Temperature | 0°C to 85°C              |
| Supply Voltage      | 3.3V ± 5% (3.135-3.465V) |

Table 6-2 Typical Power Consumption

| Modes \ Capacity | 8 GB | 16 GB | 32 GB | 64 GB |
|------------------|------|-------|-------|-------|
| Active (mA)      | 320  | 320   | 410   | 440   |
| Idle (mA)        | 100  | 100   | 100   | 105   |

Note: Results may differ from various flash configurations or host system setting.

## 7. Mechanical Specifications

### 7.1 Dimensions

Unit: mm  
Tolerance:  $\pm 0.25$

## 8. Product Ordering Information

### 8.1 Product Code Designations

---

## 8.2 Valid Combinations

---

### 8.2.1 Standard Temperature

| Capacity | No DEVSLP            |
|----------|----------------------|
| 8GB      | APM2T42P100008GAN-IT |
| 16GB     | APM2T42P100016GAN-IT |
| 32GB     | APM2T42P100032GAN-IT |
| 64GB     | APM2T42P100064GAN-IT |

### 8.2.2 Extended Temperature

| Capacity | No DEVSLP             |
|----------|-----------------------|
| 8GB      | APM2T42P100008GAN-ITW |
| 16GB     | APM2T42P100016GAN-ITW |
| 32GB     | APM2T42P100032GAN-ITW |
| 64GB     | APM2T42P100064GAN-ITW |

**Note:** Valid combinations are those products in mass production or will be in mass production. Consult your Apacer sales representative to confirm availability of valid combinations and to determine availability of new combinations.

## Revision History

| Revision | Date       | Description  | Remark |
|----------|------------|--|--------|
| 0.1      | 11/03/2014 | Preliminary release  |        |
| 1.0      | 12/05/2014 | Official release   |        |
| 1.1      | 06/18/2015 | - Revised dimension of feature page:<br>42.00x22.00x3.75->42.00x22.00x3.65<br>- Changed power consumption unit: mW->mA |        |
| 1.2      | 06/20/2015 | - Added 4GB support<br>- Revised product ordering information  |        |
| 1.3      | 11/19/2015 | Removed 4 GB support   |        |
| 1.4      | 12/29/2015 | Revised endurance ratings.   |        |
| 1.5      | 3/15/2016  | Revised product ordering information   |        |

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкуренспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
