

# HMC341

## GaAs MMIC LOW NOISE AMPLIFIER, 24 - 30 GHz

## Typical Applications

- The HMC341 is ideal for:
- Millimeterwave Point-to-Point Radios
- LMDS
- VSAT & SATCOM

### Functional Diagram

#### Features

Excellent Noise Figure: 2.5 dB Gain: 13 dB Single Supply: +3V @ 30 mA Small Size: 1.42 x 1.06 x 0.1 mm

### **General Description**

The HMC341 chip is a GaAs MMIC Low Noise Amplifier (LNA) which covers the frequency range of 24 to 30 GHz. The chip can easily be integrated into Multi-Chip Modules (MCMs) due to its small (1.51 mm<sup>2</sup>) size. The chip utilizes a GaAs PHEMT process offering 13 dB gain from a single bias supply of + 3V @ 30 mA with a noise figure of 2.5 dB. All data is with the chip in a 50 ohm test fixture connected via 0.025 mm (1 mil) diameter wire bonds of minimal length 0.31 mm (<12 mils).

### Electrical Specifications, $T_{a} = +25^{\circ} C$ , Vdd = +3V

Parameter		Min.	Тур.	Max.	Units
Frequency Range			24 - 30		GHz
Gain		10	13	16	dB
Gain Variation Over Temperature			0.03	0.04	dB/°C
Noise Figure 26 - 30 GHz   24 - 26 GHz			2.5 2.9	3.5 3.9	dB dB
Input Return Loss		9	13		dB
Output Return Loss		9	13		dB
Reverse Isolation		25	30		dB
Output Power for 1dB Compression (P1dB)		2	6		dBm
Saturated Output Power (Psat)		6	10		dBm
Output Third Order Intercept (IP3)		12	16		dBm
Supply Current (Idd)			30	40	mA

### Die Packaging Information<sup>[1]</sup>

Standard	Alternate	
GP-2 (Gel Pack)	[2]	

[1] Refer to the "Packaging Information" section for die packaging dimensions.

[2] For alternate packaging information contact Hittite Microwave Corporation.

NOTES:

- 1. ALL DIMENSIONS ARE IN INCHES [MM]
- 2. DIE THICKNESS IS .004"
- 3. TYPICAL BOND IS .004" SQUARE
- 4. BACKSIDE METALLIZATION: GOLD
- 5. BOND PAD METALLIZATION: GOLD
- 6. BACKSIDE METAL IS GROUND.
- 7. CONNECTION NOT REQUIRED FOR UNLABELED BOND PADS.

## **Pad Descriptions**

Pad Number	Function	Description	Interface Schematic
1	RFIN	This pad is AC coupled and matched to 50 Ohms.	
2	RFOUT	This pad is AC coupled and matched to 50 Ohms.	
3	Vdd	Power Supply for the 2-stage amplifier. An external RF bypass capaci- tor of 100 - 300 pF is required. The bond length to the capacitor should be as short as possible. The ground side of the capacitor should be connected to the housing ground.	Vdd Vdd

### Mounting & Bonding Techniques for Millimeterwave GaAs MMICs

The die should be attached directly to the ground plane eutectically or with conductive epoxy (see *HMC general Handling, Mounting, Bonding Note*).

50 Ohm Microstrip transmission lines on 0.127mm (5 mil) thick alumina thin film substrates are recommended for bringing RF to and from the chip (Figure 1). If 0.254mm (10 mil) thick alumina thin film substrates must be used, the die should be raised 0.150mm (6 mils) so that the surface of the die is coplanar with the surface of the substrate. One way to accomplish this is to attach the 0.102mm (4 mil) thick die to a 0.150mm (6 mil) thick molybdenum heat spreader (moly-tab) which is then attached to the ground plane (Figure 2).

Microstrip substrates should brought as close to the die as possible in order to minimize bond wire length. Typical die-to-substrate spacing is 0.076mm to 0.152 mm (3 to 6 mils).

An RF bypass capacitor should be used on the Vdd input. A 100 pF single layer capacitor (mounted eutectically or by conductive epoxy) placed no further than 0.762mm (30 Mils) from the chip is recommended.

#### **Handling Precautions**

Follow these precautions to avoid permanent damage.

**Storage:** All bare die are placed in either Waffle or Gel based ESD protective containers, and then sealed in an ESD protective bag for shipment. Once the sealed ESD protective bag has been opened, all die should be stored in a dry nitrogen environment.

**Cleanliness:** Handle the chips in a clean environment. DO NOT attempt to clean the chip using liquid cleaning systems.

Static Sensitivity: Follow ESD precautions to protect against ESD strikes.

**Transients:** Suppress instrument and bias supply transients while bias is applied. Use shielded signal and bias cables to minimize inductive pick-up.

**General Handling:** Handle the chip along the edges with a vacuum collet or with a sharp pair of bent tweezers. The surface of the chip has fragile air bridges and should not be touched with vacuum collet, tweezers, or fingers.

#### Mounting

The chip is back-metallized and can be die mounted with AuSn eutectic preforms or with electrically conductive epoxy. The mounting surface should be clean and flat.

**Eutectic Die Attach:** A 80/20 gold tin preform is recommended with a work surface temperature of 255 °C and a tool temperature of 265 °C. When hot 90/10 nitrogen/hydrogen gas is applied, tool tip temperature should be 290 °C. DO NOT expose the chip to a temperature greater than 320 °C for more than 20 seconds. No more than 3 seconds of scrubbing should be required for attachment.

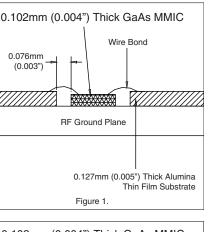

**Epoxy Die Attach:** Apply a minimum amount of epoxy to the mounting surface so that a thin epoxy fillet is observed around the perimeter of the chip once it is placed into position. Cure epoxy per the manufacturer's schedule.

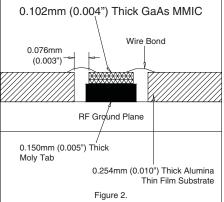

#### Wire Bonding

Ball or wedge bond with 0.025 mm (1 mil) diameter pure gold wire. Thermosonic wirebonding with a nominal stage temperature of 150 °C and a ball bonding force of 40 to 50 grams or wedge bonding force of 18 to 22 grams is recommended. Use the minimum level of ultrasonic energy to achieve reliable wirebonds. Wirebonds should be started on the chip and terminated on the package or substrate. All bonds should be as short as possible <0.31 mm (12 mils).

#### ООО "ЛайфЭлектроникс"

ИНН 7805602321 КПП 780501001 Р/С 40702810122510004610 ФАКБ "АБСОЛЮТ БАНК" (ЗАО) в г.Санкт-Петербурге К/С 3010181090000000703 БИК 044030703

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
