## Digital Time Switch <br> H5S

## Easier, More Convenient Time Switches, with New 4-circuit Output and Yearly Models in Addition to 2-circuit Weekly Models

- Independent Day Keys provide easier operation.
- Temporary holiday setting function makes it easy to turn OFF output for holidays and non-operating days.
- Settings can be made even with the Time Switch turned OFF.
- Test mode enables easy program checking.
- Complies with EMC Directives, UL/CSA, and other safety standards.
- Includes summer time (DST) adjustment. Yearly models also offer automatic switching to DST.
- Set value can be changed both upward and downward for speedier setting.
- Integrated temperature compensation circuit helps keep accurate time over a wide temperature range. (See note 1.)
- Includes time counter and total counter functions with alarm indicator. (See note 2.)
- Bank function allows program switching by an external input. (See note 3.)
- New 4-circuit output models with a compact, $72 \times 72$-mm DIN size added to the series.
Note: 1. Available only on yearly models.

2. Available only on 2 -circuit models.
3. Available only on weekly models.

## Features

## Easier and More Convenient to Use

$\square$ Simple Setting
Independent Day Keys make setting easy.

Up/down set value changing
for speedy setting.
Temporary holidays
(non-operating days)
are also easy to set.
Weekly models: Specify the day. Yearly models: Specify the date.

## Convenient Functions

Time Counter/Total Counter Functions (See note.)
This function makes it possible to monitor the total time that a load has been applied, or the total number of operating cycles. It allows the Time Switch to be used for managing maintenance.

## Time Adjustment Function (See note.)

The time can be set to 00 min 00 s by using an external input. The times on multiple Time Switches can also be easily synchronized.

Note: Equipped on 2-circuit models.

## More Applications on New Series Models

## Yearly Models

## Automatic Program Switching by Seasons

The yearly operation can be set to automatically change the weekly program depending on the season. (See note.)

Note: Up to four seasons can be set for 4-circuit models, and up to two seasons for 2-circuit models.

## Temperature Compensation Circuit Maintains

## Accurate Time

A temperature compensation circuit is provided in the yearly models to maintain accurate time keeping even when the ambient temperature varies greatly. This ensures precise operation with minimal time lags all year round, regardless of temperature changes.

## 4-circuit Models

Space-saving, Economical 4-circuit Models Added to the Series
The new 4 -circuit models are $72 \times 72-\mathrm{mm}$ DIN size. Their spacesaving size allows use in more applications.

## Model Number Structure

## Model Number Legend

Note: This model number legend includes combinations that are not available. Please check the "List of Models" for availability.

1. Control cycle

W: Weekly
Y: Yearly
2. Mounting method

None: Flush mounting
F: Surface mounting/track mounting
3. Panel language

B: English
A: Japanese
4. Number of outputs

2: 2 circuits
4: 4 circuits
5. Supply voltage

None: 100 to 240 VAC
D: $\quad 24$ VDC
6. Time accuracy

None: Standard
X : With temperature compensation

## Ordering Information

## List of Models

| Control cycle | Number of outputs | Mounting method | Supply voltage | Models |
| :---: | :---: | :---: | :---: | :---: |
| Weekly | 2 circuits | Flush mounting | 100 to 240 VAC | H5S-WB2 |
|  |  |  | 24 VDC | H5S-WB2D |
|  |  | Surface mounting/ track mounting | 100 to 240 VAC | H5S-WFB2 |
|  |  |  | 24 VDC | H5S-WFB2D |
| Yearly | 2 circuits | Flush mounting | 100 to 240 VAC | H5S-YB2-X |
|  |  |  | 24 VDC | H5S-YB2D-X |
|  |  | Surface mounting/ track mounting | 100 to 240 VAC | H5S-YFB2-X |
|  |  |  | 24 VDC | H5S-YFB2D-X |
|  | 4 circuits | Flush mounting | 100 to 240 VAC | H5S-YB4-X |
|  |  |  | 24 VDC | H5S-YB4D-X |
|  |  | Surface mounting/ track mounting | 100 to 240 VAC | H5S-YFB4-X |
|  |  |  | 24 VDC | H5S-YFB4D-X |

## - Accessories (Order Separately)

| Name | Model |
| :--- | :--- |
| Protective Cover | Y92A-72C |
| Track Mounting Base | Y92F-90 |
| Large Terminal Cover (in pairs) | Y92A-72H |

## Specifications

Ratings

| Item |  |  | Weekly 2-circuit Models (H5S-W $\square 2)$ | Yearly 2-circuit Models (H5S-Y $\square 2$ ) | Yearly 4-circuit Models ( $\mathrm{H} 5 \mathrm{~S}-\mathrm{Y} \square 4$ ) |
| :---: | :---: | :---: | :---: | :---: | :---: |

Note: 1. Depending the operation, the following steps can be used for weekly programs.
Timer operation: 2 steps
Pulse-output operation: 1 step
Cyclic operation: 4 steps
2. When the season switching setting is not being used.
3. When the season switching setting is being used.

## Operation Functions

| Item | Weekly 2-circuit Models (H5S-W $\square 2$ ) | Yearly 2-circuit Models (H5S-Y $\square \mathbf{2}$ ) | Yearly 4-circuit Models (H5S-Y $\square$ 4) |
| :---: | :---: | :---: | :---: |
| Weekly timer operation | Timer operation  <br> $\square$ Controls the output according to the set time of ON and OFF. <br> ON OFF  <br> - Min. setting unit: 1 min   <br> - Multiple-day operation also possible.  |  |  |
| Weekly pulseoutput operation | Pulse output operation Output turns ON for a fixed period (pulse width) at the set ON time. <br> - Pulse width: 1 to 59 s (in 1-s increments), or 1 to 60 min (in 1-min increments) <br> ON - The pulse width can be set for each step. |  |  |
| Weekly cyclic operation | Cyclic operation Repeatedly turns ON and OFF during the period from the cyclic start time to the stop time. <br> Independent ON- and OFF-time settings are possible. <br> - Min. setting unit: 1 min |  |  |
| Yearly timer operation | --- | Adds a yearly timer operation to the we For details, refer to About Yearly Program | imer program. page 18. |
| Yearly pulseoutput operation | --- | Adds a yearly pulse-output operation to the For details, refer to About Yearly Program | weekly pulse-output program. on page 18. |
| Temporary holiday setting | Sets temporary holidays (non-operating days) without having to revise the existing program. For details, refer to Setting Temporary Holidays (Weekly) and Setting Temporary Holidays (Yearly) on page 20. |  |  |
| Day override operation | Executes the operation for one day temporarily on another day in the 7-day period starting from the current day. For details, refer to Day Override Operation on page 21. | --- |  |
| Program check | Consecutively displays the days and times when the output is set to turn ON and OFF over the course of one week in the sequence in which the Time Switch is to operate. <br> For details, refer to Program Check Function on page 21. |  |  |

| Item | Weekly 2-circuit Models (H5S-W $\square 2$ ) | rly 2-circuit Models (H5S-Y $\square 2$ ) | rly 4-circuit Models (H5S-Y $\square 4$ |
| :---: | :---: | :---: | :---: |
| Checking the settings | Consecutively displays the times when the output is set to turn ON and OFF for one day in the sequence in which the Time Switch is to operate. <br> For details, refer to Checking the Settings on page 21. |  |  |
| Forced ON/O operation | Allows the output to be forcibly turned ON/OFF by the Output ON/OFF Switch regardless of the control output setting. |  |  |
| Override a automatic return operation | Allows the control output to be maintained in the ON (or OFF) state until the next OFF (or ON) time. This operation is controlled by using the Output ON/OFF Switch and Write Key. When completed, the Time Switch automatically resumes the previously set operation. <br> For details, refer to Override and Automatic Return Operation on page 22. |  |  |
| Summertime (DST) adjustment | Switches the current time from "current time" to "current time +1 h " for daylight savings time. Yearly models also offer automatic switching to daylight savings time. <br> For details, refer to Manual Summer Time (DST) Adjustment on page 21. |  |  |
| Time counter total counter display | Displays the total elapsed time and total count of external input. It also displays a warning when a set value is entered. <br> For details, refer to Time Counter/Total Counter Display (F2, F3, F4) on page 23. |  |  |
| Time adjustment input | Allows the time to be set to 00 min 00 s at the same time as an external input is applied. <br> For details, refer to Time Adjustment Input Function (F2) on page 24. |  |  |
| Manual operation on recovery from power failure | Allows the output state to be specified following recovery from a power failure. For details, refer to Manual Operation on Recovery from Power Failure (F2) on page 24. |  |  |
| Bank switching | Allows two groups (banks) of programs to be registered and switched by external input. <br> For details, refer to Bank Switching (F2) on page 24. |  |  |
| Season switching | --- | Allows weekly programs to be automatically switched in response to seasons throughout the year. <br> For details, refer to Season Switching/Period of Season (F8/F9) on page 24. |  |
| Power OFF settings | Allows the display to remain lit even when the power is turned OFF, and settings to be made for all functions except Override and Automatic Return Operation. <br> - The display illumination will turn OFF when there has been no operation for 2 min . The display will light again when any key other than a slide switch is pressed for at least 1 s . <br> - No output will be generated. |  |  |

## Connections

## Terminal Arrangement

## H5S- $\square \mathbf{A} \square /-\square \mathbf{B} \square$ Flush Mounting Models

## Two-circuit Models

## Four-circuit Models

## H5S- $\square$ FA $\square /-\square F B \square$ Surface Mounting Models

## Two-circuit Models

Four-circuit Models

Note: 1. The Time Switch output uses a no-voltage contact. An external power supply is required for applications in which a load is driven.
2. The output contact ratings are different for 2 -circuit and 4 -circuit models.

## ■ Input Connection (Two-circuit Models Only)

Use a switch or relay as the input contact.
Use a contact that is capable of operating with $5 \mathrm{~V}, 0.1 \mathrm{~A}$ (with a minimum signal input width of 100 ms ).

One of the following functions can be assigned to the input.

- Time Counter/Total Counter Display
- Time Adjustment
- Manual Operation on Recovery from Power Failure
- Bank Switching

Note: Input must be selected using the "F2: Input selection" step of initial setting mode. For details, refer to Using Advanced Functions on page 23.

## Front Panel (with Cover Open)

## Yearly Four-circuit Models

## Key Operations

| No. | Functions |
| :---: | :---: |
| 1 | Two-circuit Models <br> P1: Circuit (output) 1 Setting mode <br> P2: Circuit (output) 2 Setting mode <br> RUN: RUN mode <br> Four-circuit Models <br> PRGM: Setting mode (allows use of the Select Program Key to set the circuit (output) number) <br> RUN: RUN mode |
| 2 | Two-circuit Models <br> In RUN mode, this key shifts the Time Switch to the Holiday Setting mode <br> In Setting mode or Time Adjustment mode, this key decrements the value for the operation just completed. <br> Four-circuit Models <br> In RUN mode, this key shifts the Time Switch to the Holiday Setting mode. <br> When selecting the output, this key is used to set the circuit (output) number. <br> In Setting mode or Time Adjustment mode, this key decrements the value for the operation just completed. |
| 3 | Sets parameters. |
| 4 | Used to set the current time, ON/OFF time, or pulse width. |
| 5 |  |
| 6 | Used to reset all parameters, including the current time. |
| 7 | In RUN mode, this key sets or cancels summer time (+1 h) In Setting mode, this key clears the parameter. |
| 8 | In RUN mode (weekly models only), this key shifts the Time Switch to the Day Override operation setting mode. <br> In Setting mode, this key shifts the Time Switch to cyclic operation setting. |
| 9 | In RUN mode, this key shifts the Time Switch to the Program Check mode. <br> In Setting mode (yearly models only), this key is used to set the yearly program. |
| 10 | This key shifts the Time Switch to the time adjustment mode. |
| 11 | TIMER: Executes a timer or cyclic operation. PULSE: Executes a pulse-output operation. |
| 12 | ON: Turns ON the output regardless of the setting. <br> AUTO: Executes automatic operation as specified by these settings. <br> OFF: Turns OFF the output regardless of the setting. |
| 13 | - Used to set the current day, operating day, etc. <br> - Used to specify the date (yearly models only) <br> - In RUN mode, these keys are used to shift the Time Switch to the Checking the Settings mode. |

## Display

## Weekly Two-circuit Models

## Yearly Two-circuit Models

## Yearly Four-circuit Models

## Display Description

| No. | Function |
| :--- | :--- |
| $\mathbf{1}$ | Lights when power is supplied to the Time <br> Switch. |
| $\mathbf{2}$ | When 12-hour display is selected, either AM <br> or PM lights. (24-hour display is the default.) |
| $\mathbf{3}$ | Lights when summer time (+1 h) is activated. |
| $\mathbf{4}$ | Displays the current time and other values. |
| $\mathbf{5}$ | Displays the unit for the pulse width. |
| $\mathbf{6}$ | Lights when the total time or count value <br> exceeds the alarm setting. |
| $\mathbf{7}$ | Displays the number of remaining steps for <br> programming in setting mode. |
| $\mathbf{8}$ | Displays the number of the circuit (output) <br> that has been set. |
| $\mathbf{9}$ | Displays the time for the next operation, the <br> date (yearly models only), and other values. |
| $\mathbf{1 0}$ | Displays the next operation and other <br> information in chart form. |
| $\mathbf{1 2}$ | Displays the bank name (weekly models) or <br> season name (yearly models). |
| $\mathbf{1 3}$ | Lights when setting the ON/OFF time or <br> when setting a day override operation. |
| $\mathbf{1 4}$ | Lit during the temporary holiday operation or <br> when setting a temporary holiday. |
| setting a day override operation. |  |, | Displays the number of the circuit (output) for |
| :--- |
| which output is ON. |
| operation. |
| $\mathbf{1 5}$ |
| $\mathbf{1 6}$ |
| $\mathbf{1 7}$ |
| Lit during setting a yearly program. |
| Displays during the Time Adjustment mode. |

## Dimensions

Note: All units are in millimeters unless otherwise indicated.

## Digital Time Switch

Flush Mounting Model
H5S- $\square \mathbf{A} \square /-\square \square$

Note: 1. The terminal screws are M3.5
2. This illustration shows a 2 -circuit model. The 4-circuit model has the same dimensions.

## Surface Mounting Model

(With the large terminal cover (order separately) attached)

Note: 1. The terminal screws are M3.5.
2. This illustration shows a 2 -circuit model. The 4-circuit model has the same dimensions.

## Panel Cutout

Note: Panel thickness: 1 to 5 mm
(Surface mounted) Mounting holes

(DIN track mounted)

Note: 1. Using a PFP-50N or PFP-100N Mounting Track.
2. Using a PFP-100N2 Mounting Track.

Track Mounting Accessories (Order Separately)

## Mounting Track

## Safety Precautions

## ACAUTION

Minor injury by electric shock may occasionally occur. Do not touch any of the terminals while power is being supplied. Be sure to mount the terminal cover after wiring. When using a surface-mounting model in an exposed condition, always install the Y92A-72H terminal cover
 (separately purchased) to comply with Electrical Appliance and Material Safety Law (for Japan).

Minor injury due to explosion may occasionally occur. Do not use the product where subject to flammable or explosive gas

Minor electric shock, fire or malfunction may occasionally occur. Never attempt to disassemble, modify, or repair the product or touch any of the internal parts.

Fire may occasionally occur. Tighten the terminal screws to the rated torque (from 0.98 to $1.17 \mathrm{~N} \cdot \mathrm{~m}$ ).

Unexpected operation may occasionally occur. Before changing times or other settings while power is being supplied, either turn OFF the power on the load side or set the output ON/OFF switch to OFF and confirm the safety of the system.
Minor electric shock, fire, or malfunction may occasionally occur. Do not allow metal fragments, lead wire scraps, or shavings from installation work to fall inside the Time Switch.

If the output relay is used beyond its life expectancy, its contacts may become fused or there may be a risk of burning. Use the product within its rated load and electrical life expectancy. The life expectancy of the output relay varies considerably according to its capacity
 and operating conditions.
Serious injury may occasionally occur due to fire or explosion of a battery, or leakage from a battery. Never attempt to short the positive and negative terminals, recharge, disassemble, deform by applying excessive pressure, or expose the battery to fire.

## Precautions for Safe Use

Please comply strictly with the following instructions which are intended to ensure safe operation of the product.

1. Have the Time Switch installed only by qualified electrical workers.
2. Store the Time Switch within the specified ratings. If the Time Switch has been stored at temperatures of $-10^{\circ} \mathrm{C}$ or lower, let it stand for three hours or longer at room temperature before turning ON the power supply.
3. Mounting the Time Switch side-by-side may reduce the life expectancies of internal components.
4. Use the Time Switch within the specified ratings for operating temperature and humidity.
5. Do not operate the Time Switch in any of the following locations.

- Locations subject to sudden or extreme changes in temperature.
- Locations where high humidity may result in condensation.

6. The Time Switch is not waterproof or oil resistant. Do not use it in locations subject to water or oil.
7. Do not use the Time Switch in locations subject to excessive dust, corrosive gas, or direct sunlight.
8. Install the Time Switch well away from any sources of excessive static electricity, such as pipes transporting molding materials, powders, or liquids.
9. Maintain voltage fluctuations in the power supply within the specified range.
10. Internal elements may be destroyed if a voltage outside the rated voltage is applied.
11.Be sure to wire the terminals correctly and use the correct polarity.
11. Separate equipment that produces input signals, input signal wiring, and the Time Switch from noise-generating sources and high-voltage lines containing noise.
13.Do not connect more than two crimp terminals to each Time Switch terminal.
14.Up to two wires of the same size and type can be inserted into a single terminals.
12. Use the specified wires for wiring. Applicable wire: AWG 22 to AWG 14 (equal to a cross-sectional area of 0.326 to $2.081 \mathrm{~mm}^{2}$ )
Solid wire or twisted wire
Material: Copper
13. Install a switch or circuit breaker that allows the operator to immediately turn OFF the power, and label it to clearly indicate its function.
17.Take adequate protective measures (such as a breaker, or fuse) for the power supply of the Time Switch.
14. When using heaters, be sure to use a thermal switch for the load circuit.
19.Always maintain the load current within specifications.
20.Use a switch, relay, or other contacts so that the rated power supply voltage will be reached within 0.1 s . If the power supply voltage is not reached quickly enough, the power source may fail to reset or the outputs may fail to operate correctly.
15. Use a switch, relay, or other contact to turn the power supply OFF instantaneously. Outputs may malfunction and memory errors may occur if the power supply voltage is decreased gradually.
22.The Time Switch utilizes a transformerless power supply. Do not touch the input terminal while power is being supplied; touching live terminals may result in electric shock.
16. Use the Time Switch within the specified ratings for vibration and shock.
24.Use a commercial power supply when using AC power supply voltage input.
Although some inverters specify their output frequency as 50/ 60 Hz , smoke or burning may occur from a rise in internal temperature. Do not use inverter output as the power supply.
25.Do not leave the Time Switch for long periods at a high temperature with output current in the ON state. Doing so may result in the premature deterioration of internal components (e.g., electrolytic capacitors).
26.Do not use organic solvents (such as paint thinner or benzine), strong alkaline, or strong acids to clean the case because they will damage the external finish.
17. None of the Time Switch components are user-replaceable, including the battery.
18. Use a tool such as long nose pliers to prepare the openings for pulling wires out of the optional Y92A-72H Large Terminal Cover. Attempts to form an opening by hand may result in injury.

## Precautions for Correct Use

1. When the power is turned $O N$, an inrush current will flow for a short time (AC: Approx. 2.5 A ( 0.3 ms ), DC: Approx. 1.1 A (3 ms)). Depending on the power supply capacity, operation may not start. Be sure to use a power supply with a sufficient capacity.
2. Inrush current generated by turning ON or OFF the power supply may deteriorate contacts on the power supply circuit. Use to turn ON or OFF devices with a rated current of 10 A min.

## EN/IEC Standards

- The insulation system between the power supply circuit and inputoutput terminals provides basic insulation.
Therefore connect the output terminals only to circuits without exposed conductive parts. If a connection to a Safety Extra Low Voltage (SELV) circuit is desired, supplementary insulation must be provided.
- Use crimp type cable lug terminals with insulating sleeves for wiring.
- Be sure to mount a surface-mounting model (H5S- $\square \mathrm{FA} \square /-\square \mathrm{FB} \square$ ) in an enclosure.
- The relationship between load current and ambient air temperature is shown by the range below for 2 -circuit models.

If wires with a temperature rating of $105^{\circ} \mathrm{C}$ or higher are used, refer to the derating curve in Specifications on page 3.

- Control system:

Electronic
Weekly models - Type 1 BSTU
Yearly models - Type 2 BSTU Class 0
Rated impulse withstand voltage: $2,500 \mathrm{~V}$ AC
Ball-pressure test temperature (enclosure material): $125^{\circ} \mathrm{C}$

## Basic Use

## Prior to Using

Before setting the parameters necessary for each operation, the operation of each circuit (output) must be determined. Begin by setting initial setting mode as required.

## Time Adjustment (Weekly Models)

## Weekly, 2 Circuits

Example: Set the current time to Saturday 17:28.

1. Set the Mode Switch to RUN.

2. Press TIME ADJ for 2 s or more. The © symbol flashes.

Shaded portion indicates blinking of the indicator.

3. Press SAT
(The bar (一) mark at the Saturday position will turn ON.)
Set the time with $h$ and $m$. *

4. Press WRITE to enter the setting, and the Time Switch will start from 0 second.

* Holding down the $h$ and $m$ Keys rapidly advances the value. Pressing $\approx$ decrements the value of the key that was last pressed.

## Note:

- When first turned ON or after a reset, the time adjustment display appears on the screen. Adjust the time by following steps 3 and 4.
- If TIME ADJ is pressed again before pressing WRITE, the setting is cancelled. (The setting is not revised.)

## Time Adjustment (Yearly Models)

## Yearly, 2 Circuits Yearly, 4 Circuits

Example: Set the current time to 17:28 on August 15, 2006.

1. Set the Mode Switch to RUN

Shaded portion indicates blinking of the indicator.
2. Press TIME ADJ for 2 s or more. The © symbol flashes.

3. Specify the date by pressing $Y, M$ and D. *

4. Press WRITE.

Set the time with $h$ and $m$. *

5. Press WRITE to enter the settings, and the Time Switch will start from 0 second.

* Holding down the $h$ and $m$ Keys rapidly advances the value. Pressing $\approx$ decrements the value of the key that was last pressed.
Note:
- When first turned ON or after a reset,
the time adjustment display appears
on the screen. Adjust the time by
following steps 3 through 5 .
- If TIME ADJ is pressed again before
pressing WRITE, the setting is
cancelled. (The setting is not revised.)

## Ordinary Timer Operation

Weekly， 2 Circuits Yearly， 2 Circuits Yearly， 4 Circuits
Example：ON at 8：30 and OFF at 17：15 on Monday through Friday．

1．Set the Mode Switch to P1 or P2．＊1 （The Time Switch enters program setting mode．）
$\rightarrow$ For 4－circuit models，refer to page 18.

2．Press the Day Keys to turn ON the bars（一）at the positions of Monday through Friday．
Set the ON time with $h$ and $m$ ．＊2

3．Press WRITE．
Set the OFF time with $h$ and $m$ ．＊2

4．Press WRITE to enter the settings．
＊1 If one or more programs have already been set，the display starts showing the set programs．
To add another program，press WRITE repeatedly until＂－－：－－＂ is displayed．
＊2 Holding down the $h$ and $m$ Keys rapidly advances the value． Pressing $\approx$ decrements the value of the key that was last pressed．

## Note：

－If multiple settings are required，repeat steps 2 through 4.
－Both the ON and OFF times must be set．
－All of the weekly programs for the selected circuit（output）can be checked by pressing WRITE in program setting mode．
－When the Mode Switch is set to P1 or P2（to PRGM for 4－circuit models），the Time Switch stops automatic operation．To forcibly turn ON or OFF the output，use the Output ON／OFF Switches．
－The set data will be cleared if the Output Setting Switch is moved between the TIMER and PULSE positions after the data has been set．

## Multiple－day Operation 1

Weekly， 2 Circuits Yearly， 2 Circuits Yearly， 4 Circuits
Example：ON continuously from 8：30 on Monday to 17：15 on Friday．

1．Set the Mode Switch to P1 or P2．＊1 （The Time Switch enters program setting mode．）
$\rightarrow$ For 4－circuit models，refer to page 18.

2．Press the Day Keys to turn ON the bar（一）at the Monday position．Set the ON time with $h$ and $m$ ．＊2

3．Press WRITE．
Press MON to flash the bar（－）at all day positions and press FRI to turn ON the bar（一）at the Friday
 position．
Set the OFF time with $h$ and $m$ ．＊2
4．Press WRITE to enter the settings．
＊1 If one or more programs have already been set，the display starts showing the set programs．
To add another program，press WRITE repeatedly until＂－－：－－＂ is displayed．
＊2 Holding down the $h$ and $m$ Keys rapidly advances the value． Pressing $\approx$ decrements the value of the key that was last pressed．

## Multiple－day Operation 2

Weekly， 2 Circuits Yearly， 2 Circuits Yearly， 4 Circuits
Example：ON at 22：00 from Monday through Friday and OFF at 8：00 each following morning．

1．Set the Mode Switch to P1 or P2．＊1 （The Time Switch enters program setting mode．）
$\rightarrow$ For 4－circuit models，refer to page 18.

2．Press the Day Keys to turn ON the bar（一）at the positions of Monday through Friday．
Set the ON time with $h$ and $m$ ．＊2

3．Press WRITE．
Press MON to turn OFF the bar $(-)$ at the Monday position and press SAT to turn ON the bar（一）
 at the Friday position．
Set the OFF time with $h$ and $m$ ．＊2
4．Press WRITE to enter the settings．
＊1 If one or more programs have already been set，the display starts showing the set programs．
To add another program，press WRITE repeatedly until＂－－：－－＂ is displayed．
＊2 Holding down the $h$ and $m$ Keys rapidly advances the value． Pressing $\approx$ decrements the value of the key that was last pressed．

## Pulse－output Operation

Weekly， 2 Circuits Yearly， 2 Circuits Yearly， 4 Circuits
Example：ON for 30 seconds at 8：25 am from Monday through Saturday．

1．Set the Mode Switch to P1 or P2．＊1
（The Time Switch enters program
setting mode．）
$\rightarrow$ For 4－circuit models，refer to page 18.

2．Press the Day Keys to turn ON the bars（一）at the positions of Monday through Saturday．Set the ON time with $h$ and $m$ ．＊2

3．Press WRITE．
Set the pulse width with PLS．＊2
The displayed pulse width changes by pressing this key in the following order．

$1 \mathrm{~s} \rightarrow 2 \mathrm{~s} \ldots \rightarrow 59 \mathrm{~s} \rightarrow 1 \mathrm{~m} \ldots \rightarrow 59 \mathrm{~m} \rightarrow 60 \mathrm{~m} \rightarrow 1 \mathrm{~s}$
4．Press WRITE to enter the settings．
＊1 If one or more programs have already been set，the display starts showing the set programs．
To add another program，press WRITE repeatedly until＂－－：－－＂ is displayed．
＊2 Holding down the $h$ and $m$ Keys rapidly advances the value． Pressing $\approx$ decrements the value of the key that was last pressed．

## Note：

－If multiple settings are required，repeat steps 2 through 4.
－Both the ON time and pulse width must be set．
－All of the weekly programs for the selected circuit（output）can be checked by pressing WRITE in program setting mode．
－When the Mode Switch is set to P1 or P2（to PRGM for the 4－ circuit model），the Time Switch stops automatic operation．To forcibly turn ON or OFF the output，use the Output ON／OFF switches．
－The set data will be cleared if the Output setting switch is moved between the TIMER and PULSE positions after the data has been set．

## Cyclic Operation

Weekly, 2 Circuits
Example: ON for 5 minutes and OFF for 1 hour 55 minutes repeatedly from 8:00 to 19:00 on Sunday.

1. Set the Mode Switch to P1 or P2. *1
(The Time Switch enters program setting mode.)
$\rightarrow$ For 4-circuit models, refer to page 18.

2. Press CYCLE.
(The Time Switch enters cyclic program setting mode.)
3. Press the Day Keys to turn ON the bar $($ 一) at the Sunday position.
Set the start time to 8:00 with $h$ and (m. *2

4. Press WRITE

Set the stop time to 19:00 with h and $m$. *2

5. Press WRITE.

Set the ON time period with $h$ and (m. *2

6. Press WRITE.

Set the OFF time period with $h$ and m. *2

7. Press WRITE to enter the settings.
*1 If one or more programs have already been set, the display starts showing the set programs.
To add another program, press WRITE repeatedly until "--:- - " is displayed.
*2 Holding down the $h$ and $m$ Keys rapidly advances the value.
Pressing $\approx$ decrements the value of the key that was last pressed.

## Note:

- If multiple settings are required, repeat steps 2 through 7.
- All the start/stop times, and ON/OFF time periods must be set.
- All of the weekly programs for the selected circuit (output) can be checked by pressing WRITE in program setting mode.
- When the Mode Switch is set to P1 or P2 (to PRGM for 4-circuit models), the Time Switch stops automatic operation. To forcibly turn ON or OFF the output, use the Output ON/OFF Switches.
- Set cyclic operation so as not to overlap other operations in individual circuits.
- The set data will be cleared if the Output Setting Switch is moved between the TIMER and PULSE positions after the data has been set.

## Clearing the Settings

Weekly, 2 Circuits Yearly, 2 Circuits

## Yearly, 4 Circuits

## Partial clearing

1. Set the Mode Switch to P1 or P2 and select the setting to be cleared.
2. Press CLEAR briefly.

Shaded portion indicates blinking of the indicator.

3. Press WRITE to clear the setting. *

## Clearing all the settings in an entire circuit

1. Set the Mode Switch to the position for the circuit whose settings are to be cleared.
2. Press and hold CLEAR for 3 s or more.

Shaded portion indicates blinking of the indicator

3. Press WRITE to clear all the settings of the circuit. *

* The clearing operation can be cancelled by pressing CLEAR while [LI - is displayed.

## Programming for 4-circuit models

## Yearly, 4 Circuits

The following shows how to program (select the output circuit number) for 4-circuit models.

1. Set the Mode Switch to PRGM.
(The Time Switch enters program setting mode.)
$\underset{\text { RUN }}{\text { PRG: }}$
2. Select an output circuit with SELECT PRGM. Pressing the key changes the set circuit number displayed in the lower right corner of the LCD.

Shaded portion indicates blinking of the indicator

$\rightarrow 1 \rightarrow 2 \rightarrow 3 \rightarrow 4$
The rest of the procedure is the same as for 2 -circuit models.
Note: The circuit number cannot be changed during the course of setting.

## About Yearly Programs

## Yearly, 2 Circuits Yearly, 4 Circuits

Yearly programs in addition to ordinary weekly programs can be set for 2- and 4-circuit yearly models.

Example: Extend ordinary weekly operation from 18:00 to 22:15 on March 25 only.

Note: 1. This example combines the following programs. For details on yearly programming, refer to page 19. Weekly program
Friday, Saturday, and Sunday: 9:00 (ON time),
18:00 (OFF time)
Yearly program
March 25: 18:00 (ON time), 22:15 (OFF time)
2. For details on automatically switching the weekly program depending on the season, refer to page 24.

Example: ON continuously from 18:00 on March 25, 2006, to 12:00 on April 9, 2006.

To set multiple-day operation for a yearly program, two yearly programs must to be set as shown in the following example.

## Program (1)

March 25, 2006 (Start date) April 8, 2006 (End date) 18:00 (ON time) 12:00 (OFF time)
Program (2)
March 26, 2006 (Start date) April 8, 2006 (End date) 8:00 (ON time) 22:00 (OFF time)

Note: Do not enter a weekly program.

## Yearly Timer Operation

## Yearly, 2 Circuits

Example: ON at 18:00 and OFF at 22:15 on March 25 every year.
Set the program in the following order.

$\square$| Day |
| :--- |
| period |
| Time |
| period |\(\left[\begin{array}{l}March 25, 2006 (Start date) <br>

March 25, 2006 (End date)\end{array}\right.\)

| 18:00 (ON time) |
| :--- |
| 22:15 (OFF time) |

Shaded portion indicates blinking of the indicator.

1. Set the Mode Switch to P1 or P2. $\rightarrow$ For 4-circuit models, refer to page 18.

2. Press YEAR for 1 s or more. (The Time Switch enters yearly program setting mode. *1)
3. Specify the start date using $Y, m$ and D. *2
The year can be set from the current year to the next two years as shown in the example. If the year is set to "--", the operation performs every year.
<Example>
If the current year is 2006, the displayed year changes as follows. - - $06 \rightarrow 07 \rightarrow 08 \rightarrow--06 \rightarrow$
4. Press WRITE.

Specify the end date using $Y, m$ and D. *2
If the starting year has been set to
"--", the ending year cannot be set.
5. Press WRITE.

Set the ON time with $h$ and $m$. *2

6. Press WRITE.

Set the OFF time with $h$ and $m$. *2
7. Press WRITE to enter the settings.
*1 If one or more programs have already been set, the display starts showing the set programs.
To add another program, press WRITE repeatedly until "--:- - " is displayed.
*2 Holding down the date- or time-setting keys rapidly advances the value.
Pressing $\approx$ decrements the value of the key that was last pressed.

## Note:

- Yearly programs are added to weekly programs.
- All the start/end dates and ON/OFF times must be set. the maximum number of yearly timer operations that can be set is four for each output circuit
- If multiple settings are required, repeat steps 3 through 7.
- All of the yearly programs for the selected circuit (output) can be checked by
pressing WRITE in yearly program setting mode.
- The set data will be cleared if the Output Setting Switch is moved between the TIMER and PULSE positions after the data has been set.

## Yearly Pulse-output Operation

## Yearly, 2 Circuits Yearly, 4 Circuits

Example: To produce output for 2 minutes at 18:00 from March 25 to April 9.

Set the program in the following order.

$\downarrow$| Day |
| :--- |
| period |
| Time <br> period$\left[\begin{array}{l}\text { March 25, } 2006 \text { (Start date } \\ \text { April 9, 2006 (End date) }\end{array}\right.$ |
| 18:00 (ON time) |
| 2 minutes (Pulse width) |

Shaded portion indicates blinking of the indicator.

2. Press YEAR for 1 s or more. (The Time Switch enters yearly program setting mode. *1)

3. Specify the start date using $Y$, $m$ and D. *2
The year can be set from the current year to the next two years as shown in the example. If the year is set to "--",
the operation performs every year.
<Example>
If the current year is 2006, the
displayed year changes as follows.
$-\rightarrow 06 \rightarrow 07 \rightarrow 08 \rightarrow--\rightarrow 06 \rightarrow$
4. Press WRITE.

Specify the end date using $Y$, m
and D. *2
If the starting year has been set to
"--", the ending year cannot be set.

5. Press WRITE.

Set the ON time with $h$ and $m$. *2

6. Press WRITE.

Set the pulse width with PLS.
The displayed pulse width changes by pressing this key in the following
 order.
$1 \mathrm{~s} \rightarrow 2 \mathrm{~s} \rightarrow \cdots 59 \mathrm{~s} \rightarrow 1 \mathrm{~m} \rightarrow \cdots$
$59 \mathrm{~m} \rightarrow 60 \mathrm{~m} \rightarrow 1 \mathrm{~s}$
7. Press WRITE to enter the settings.
*1 If one or more programs have already been set, the display starts showing the set programs.
To add another program, press WRITE repeatedly until "--:--" is displayed.
*2 Holding down the date- or time-setting keys rapidly advances the value.
Pressing $\approx$ decrements the value of the key that was last pressed.

## Note:

- Yearly programs are added to weekly programs.
- All the start/end dates, ON time, and pulse width must be set. The maximum number of yearly pulse output operations that can be set is four for each output circuit.
- If multiple settings are required, repeat steps 3 through 7.
- All of the yearly programs for the selected circuit (output) can be checked by pressing WRITE in yearly program setting mode.
- The set data will be cleared if the Output Setting Switch is moved between the TIMER and PULSE positions after the data has been set.

## Convenient Functions

## Setting Temporary Holidays (Weekly)

## Weekly, 2 Circuits

Temporary holidays (non-operating days) can be easily set.
Because the setting is automatically cleared after the set holiday has passed, temporary holidays are easily set without changing other settings, including those of the Output ON/OFF Switches.

Example: Friday and Saturday in the current week are set as holidays (non-operating days).
The Time Switch then operates according to the ordinary (previous) settings from the following week onward.

Shaded portion indicates blinking of the indicator.

1. Press HOLIDAY for 2 s or more in RUN mode.
(The Time Switch enters holiday setting mode.)
2. Turn OFF the bars (-) at the positions of the days to be set as holidays.
Bar ON: Operating day
Bar OFF: Holiday

3. Press WRITE to enter the setting. After "Holisy" is displayed for approximately 1 s , the Time Switch returns to RUN mode.

## Note:

- Any day in the 7-day period starting from the current day can be set as a holiday.
The setting is automatically cleared after the set holiday has passed.
- All ON operations are cancelled on the holiday.
- The set holidays are valid for all the output circuits.
- You must be in RUN mode to enter to holiday setting mode.
- If the current day of the week is changed, the holiday settings will be cleared.
- Press HOLIDAY for 2 s in holiday setting mode to return to RUN mode. If you do nothing for 30 s , the Time Switch will automatically return to RUN mode.

## Setting Temporary Holidays (Yearly)

## Yearly, 2 Circuits Yearly, 4 Circuits

Temporary* holidays (non-operating days) can be set simply by specifying dates. The holidays will be OFF in both the weekly and yearly programs. Because the setting is automatically cleared after the set holiday has passed, temporary holidays are easily set without changing other settings, including those of the Output ON/OFF Switches.

* Annual holidays can also be set.

Example: The days from April 29 to May 7 in 2006 are set as holidays (non-operating days). The Time Switch then operates according to the ordinary (previous) settings from the following year onward.

Shaded portion indicates blinking of the indicator.

1. Press HOLIDAY for 2 s or more in RUN mode. *1
(The Time Switch enters holiday setting mode.)

2. Specify the start date of holidays
using $Y$, $M$ and $D$. *2
The year is displayed in the following
order by pressing $Y$. (The year can
be set from the current year to the
next two years.)
<Example> If the current year is 2006, the displayed year changes as follows.
$06 \rightarrow 07 \rightarrow 08 \rightarrow--\rightarrow 06 \rightarrow$
If the year is set to --, the holiday setting is executed every year.
3. Press WRITE.

In the same manner, specify the end date of holidays using $Y, M$ and (D). *2

If the starting year has been set to
"- -", the ending year cannot be set.
4. Press WRITE to enter the settings.
5. Press HOLIDAY for 2 s or more to return to RUN mode.
*1 If one or more programs have already been set, the display starts showing the set programs.
To add another program, press WRITE repeatedly until "--.--" is displayed.
*2 Holding down the date-setting keys rapidly advances the value
Pressing $\approx$ decrements the value of the key that was last pressed.

## Note:

- Any date between the current date and December 31 in the year after the following year can be specified as a holiday.
- The setting is automatically cleared after the set holiday has passed (unless the year is set to --).
- Repeat steps 2 to 4 to make other settings.
- Both the start and end dates of holidays must be set. The maximum number of holidays that can be set is 16 .
- You must be in RUN mode to enter to holiday setting mode.
- If the current date is changed, the holiday settings will be cleared.
- When you specify the year, be sure to set the end date so that it is after the start date.
- Press HOLIDAY for 2 s in holiday setting mode to return to RUN mode. If you do nothing for 30 s , the Time Switch will automatically return to RUN mode.

## Program Check Function

Weekly, 2 Circuits
The days and times when output is set to turn ON and OFF over the course of one week can be displayed in the sequence in which the Time Switch is to operate.

Shaded portion indicates blinking of the indicator.

1. Press TEST for 2 s or more in RUN mode.
("EE5t" flashes and the day and time of the next change in output state are displayed.)

2. Press WRITE.

The display shows the time of the next change in output state.
Each time WRITE is pressed, the display shows the days and times for one week.

## Checking the Settings

## Weekly, 2 Circuits Yearly, 2 Circuits

## Yearly, 4 Circuits

The program can be checked for one week from the current day. Change to the setting mode to check the year program past one week.

Shaded portion indicates blinking of the indicator.

1. Press one of the Day Keys for 2 s or more in RUN mode to check settings for the day.
("LHE" flashes and the time of the first ON time is displayed.)

## Day Override Operation

## Weekly, 2 Circuits

Operation for one day can be temporarily (for only one week) executed on another day.

Example: The operation set for Sunday is executed this Saturday. The Time Switch performs the ordinary operation (according to the previous settings) from next Saturday onward.

Shaded portion indicates
blinking of the indicator.

1. Press COPY for 2 s or more in RUN mode.
(The Time Switch enters day override operation setting mode.)

2. Turn ON the bar (一) at the position of the day for which the set operation is to be executed on another day. ("GO!" will flash.)

3. Press WRITE to select the day on which the operation is to be executed.

4. Turn ON the bar ( - ) at the position of the day. More than one day can be selected.

5. Press WRITE to enter the setting.

## Note:

- Any day in the 7-day period starting from the current day can be set as a day on which another day's operation is to be executed. The setting is automatically cleared after the day has passed.
- All ON operations are executed on another day.
- The day override operation settings are valid for all the output circuits.

## Manual Summer Time (DST) Adjustment

Each time +1 hh is pressed for 2 s or more in RUN mode, the current time switches between the current time and the current time +1 hour.

Note: With Yearly models, the current time can also be automatically switched to DST. For details, refer to functions F6 and F7 on page 25.

## Switching between 12-hour and 24hour display

## Weekly, 2 Circuits <br> Yearly, 2 Circuits Yearly, 4 Circuits

Each time $h$ is pressed for 2 s or more in RUN mode, the current time switches between 12-hour (AM/PM) and 24-hour display.

## Display Switching

Each time $m$ is pressed for 2 s or more in RUN mode, the displayed content switches as shown below.

## Weekly, 2 Circuits

Note: Displays only when Input selection (see function F2 on page 23) is set to $t 06 t$.

## Yearly, 2 Circuits

Note: Displays only when Input selection (see function F2 on page 23) is set to $2 \Delta \mathrm{t}$.

## Override and Automatic Return Operation

## Weekly, 2 Circuits <br> Yearly, 2 Circuits <br> Yearly, 4 Circuits

Helps to cope with sudden schedule changes without having to revise the existing program. This function allows ON/OFF states that were forcibly set using the Output ON/OFF Switch to be maintained until the next ON/OFF time.

## Turn output OFF while maintaining AUTO operation

1. Change the setting of the Output ON/OFF Switch from AUTO to OFF.
2. Return the Output ON/OFF Switch from OFF to AUTO while pressing WRITE. (Output remains in the OFF state.)

3. The regular operation will be performed from the next ON time.

## Turn output ON while maintaining AUTO operation

1. Change the setting of the Output ON/OFF Switch from AUTO to ON.
2. Return the Output ON/OFF Switch from ON to AUTO with WRITE pressed. (Output remains in the ON state.)

3. The regular operation will be performed from the next OFF time.

## Yearly, 4 Circuits

## Using Advanced Functions

## About Advanced Functions

Set the advanced functions as required to perform more advanced operation. Outlines of the advanced functions are provided on the following pages.
Refer to the Instruction Manual enclosed with the H5S for details.

## Initial Setting Mode

Weekly, 2 Circuits Yearly, 2 Circuits Yearly, 4 Circuits

## Time Counter/Total Counter Display

(F2, F3, F4)

## Yearly, 2 Circuits Yearly, 2 Circuits

This function displays the total elapsed time and total input count for an external input.

The alarm indicator can also be displayed if an alarm value has been set.

Note: For display details, refer to Display Switching on page 22.

## Input selection (F2)

- Set Input selection (F2) in initial setting mode to Time Counter/Total Counter.

Shaded portion indicates
blinking of the indicator.

|  | 1. Press $n$ or $m$ to change the display to $t$ att <br> 2. Press WRITE to enter the setting. |
| :---: | :---: |

## Alarm for time counter (F3)

Shaded portion indicates blinking of the indicator.

Note: The default setting is 0.0 h (no alarm display).

1. The display will automatically change to the alarm setting screen 2 s after switching to F3.
Press the $h$ or $m$.
h Key: Increments in units of 1,000 h*
(m) Key: Increments in units of $10 \mathrm{~h}^{*}$
2. Press WRITE to enter the setting.

* Pressing $\approx$ decrements the value of the key that was last pressed.

## Alarm for total counter (F4)

Shaded portion indicates blinking of the indicator.

## 05043 <br> Ene

Note: The default setting is 0 (no alarm display).

1. The display will automatically change to the alarm setting screen 2 s after switching to F4.
Press the $h$ or $m$.
(h) Key: Increments in units of 10,000*
(m) Key: Increments in units of $100^{*}$
2. Press WRITE to enter the setting.

* Pressing $\approx$ decrements the value of the key that was last pressed.

## Time Adjustment Input Function (F2)

## Weekly, 2 Circuits Yearly, 2 Circuits

The time can be set to 00 min 00 s at the same time as external input is applied. (The hours is rounded up for 30 minutes or higher and rounded down for 29 minutes or lower.)
When using two or more Time Switches, their times can be synchronized.

## Input selection (F2)

- Set Input selection (F2) in initial setting mode to Time Adjustment Input.

Shaded portion indicates
blinking of the indicator.

1. Press $h$ or $m$ to change the display to Syini.
2. Press WRITE to enter the setting.

## Manual Operation on Recovery from Power Failure (F2)

## Weekly, 2 Circuits Yearly, 2 Circuits

After power is restored to the H 5 S , it is possible to set the Time Switch to stop turning ON output until external input is applied.

## Input selection (F2)

- Set Input selection (F2) in initial setting mode to Manual Operation on Recovery from Power Failure.

Shaded portion indicates
blinking of the indicator.

1. Press $h$ or $m$ to change the display to bāat
2. Press WRITE to enter the setting.

## Bank Switching (F2)

## Weekly, 2 Circuits

Two groups (banks) of programs can be registered with the Time Switch. Banks can be switched by external input.

## Input selection (F2)

- Set Input selection (F2) in initial setting mode to Bank Switching.

Shaded portion indicates
blinking of the indicator.

1. Press $h$ or $m$ to change the display to $b R_{n-1}$.
2. Press WRITE to enter the setting.

## Switching banks in RUN mode

Banks are switched as shown in the following table depending on the external input state.

|  | Open-circuited | Short-circuited |
| :--- | :--- | :--- |
| Bank | A | B |

## Programming a bank

Press TIIME ADJ in program setting mode to switch banks. Different programs can be set for each bank.

## Season Switching/Period of Season (F8/F9)

## Yearly, 2 Circuits Yearly, 4 Circuits

Weekly programs can be set to automatically switch throughout the year in response to seasons.

Mar. Apr. May Jun. Jul. Aug. Sept. Oct. Nov. Dec. Jan. Feb.

| Summer |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| Seasons( ${ }^{*}$ ) | Spring | Summer | Autumn | Winter |
| Setting | $17: 30$ ON | 19:00 ON | 18:00 ON | 17:00 ON |
|  | $21: 00$ OFF | $22: 00$ OFF | $21: 00$ OFF | $21: 00$ OFF |

* Up to four seasons can be set for 4-circuit models, and up to two seasons for 2-circuit models.

## Season switching (F8)

- Turn ON Season switching (F8) in initial setting mode.

Shaded portion indicates blinking of the indicator.

Note: The "C" and "D"
indications are not displayed in 2-circuit models.

1. Press $h$ or $m$ to change the display to ar.
2. Press WRITE to enter the setting.

## Period of Season (F9)

Shaded portion indicates
blinking of the indicator.

1. Press $h$ or $m$ to select the desired season.
2. Press WRITE to enter the setting. The display then changes to the start period of season input screen. Press (M) or D to designate the starting date.
3. Press WRITE to enter the setting. The display then changes to the end period of season input screen. Press (M) or D to designate the ending date.
4. Press WRITE to enter the setting

## Note:

The following is set as the default period of season.
A: 1.1 to 12.31 ( $1 / 1$ to $12 / 31$ )
B to D: ----- to ----- (no setting)
*The "C" and "D" indications are not displayed in 2-circuit models.

- If overlapping periods are set, the priority becomes $\mathrm{A}<\mathrm{B}<\mathrm{C}<\mathrm{D}$. For example, setting $A(1 / 1$ to $12 / 31)$ and $B(4 / 1$ to $9 / 30)$ will result in the following: $1 / 1$ to $3 / 31$ : $\mathrm{A}, 4 / 1$ to $9 / 30$ : $\mathrm{B}, 10 / 1$ to $12 / 31$ : A .
- All outputs are OFF in the weekly program for all dates that do not come in any period.

## Switching seasons

One group of programs is automatically switched to another, according to the seasons set in initial setting mode.*

* The season switching functions apply only to weekly programs, not yearly programs.

## Programming a season

Press TIME ADJ in program setting mode to switch seasons. Different weekly programs can be set for each season.

## Next Operation Display (F1)

## Weekly, 2 Circuits

The order of the output channels for which the next operation (the next ON or OFF time) is set can be selected for the sub-display.
This function is useful when an operation in a particular circuit is to be monitored.

## Parameters

anty 1 - ------- - Displays the next operation for circuit 1 only.
ant ப2------- - Displays the next operation for circuit 2 only.
ant צ 3------ - - Displays the next operation for circuit 3 only.
ant צ 4------- - Displays the next operation for circuit 4 only.
Fl: 1234------ - Displays the next operation for all circuits.
Note: 1. Circuits 3 and 4 are not displayed for 2 -circuit models.
2. The inverted characters indicate the default.

## Setting method

Shaded portion indicates
blinking of the indicator.

1. Select one of the parameters using
(h) or m.
2. Press WRITE to enter the setting.

## Date Format Selection (F5)

## Yearly, 2 Circuits Yearly, 4 Circuits

The displayed date format is selectable between "month. day" and "day. month".

## Parameters

Frisd : "month. day"
dd..nn: "day. month"
Note: The inverted characters indicate the default.

## Setting method

Shaded portion indicates blinking of the indicator

1. Press $h$ or $m$ to select one of the parameters.
2. Press WRITE to enter the setting.

## Summer Time (DST) Adjustment (F6)

## Yearly, 2 Circuits Yearly, 4 Circuits

Manual or automatic summer time adjustment can be selected.

## Parameters

GFF : Manual adjustment
FH: $\mathbf{a}$ : Automatic adjustment (Select summer time schedule in F7.)
Note: The inverted characters indicate the default.

## Setting method

Shaded portion indicates
blinking of the indicator.

1. Press $h$ or $m$ to select one of the parameters.
2. Press WRITE to enter the setting.

## Summer Time Schedule Selection (F7)

## Yearly, 2 Circuits Yearly, 4 Circuits

The time and date when the Time Switch automatically switches to and from summer time can be selected with reference to the following regions.

## Parameters

| Regions | Summer time start date and time | Summer time end date and time |
| :---: | :---: | :---: |
| H5 (NorthAmerica) | At 2:00 on the second Sunday in March | At 2:00 on the first Sunday in November |
| Eii (Europe) | At 2:00 on the last Sunday in March | At 3:00 on the last Sunday in October |
| Fu5t (Australia) | At 2:00 on the last Sunday in October | At 3:00 on the last Sunday in March |

Note: The inverted characters indicate the default.

## Setting method

Shaded portion indicates
blinking of the indicator.

1. Press $h$ or $m$ to select one of the parameters.
2. Press WRITE to enter the setting.

## About the Self Diagnosis Function

| Indication | Description | Output | Remedy |
| :--- | :--- | :--- | :--- |
| $E!$ | CPU error | OFF | Press <br> "RESET" |
| $E Z$ | Memory error | OFF | Press <br> "RESET" |

## Read and Understand This Catalog

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

## Warranty and Limitations of Liability

## WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

## LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall the responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.
IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

## Application Considerations

## SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the products.

At the customer's request, OMRON will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

- Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this catalog.
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations.
- Systems, machines, and equipment that could present a risk to life or property.

Please know and observe all prohibitions of use applicable to the products.
NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCTS ARE PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

PROGRAMMABLE PRODUCTS
OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

## Disclaimers

## CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons.
It is our practice to change model numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the products may be changed without any notice. When in doubt, special model numbers may be assigned to fix or establish key specifications for your application on your request. Please consult with your OMRON representative at any time to confirm actual specifications of purchased products

## DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

## PERFORMANCE DATA

Performance data given in this catalog is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.

## ERRORS AND OMISSIONS

The information in this document has been carefully checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical, or proofreading errors, or omissions.

LifeElectronics
Живое партнерство

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
