27 – 31 GHz GaN Power Amplifier

Product Description

Qorvo's TGA2594-HM is a packaged power amplifier fabricated on Qorvo's 0.15um GaN on SiC process (QGaN15). Operating from 27 to 31 GHz, the TGA2594-HM achieves 36.5dBm saturated output power with a power-added efficiency of 25%, and 25dB small signal gain.

The TGA2594-HM is offered in a hermetically sealed 22-lead 7x7 mm ceramic QFN designed for surface mount to a printed circuit board. The package has a Cu-Mo base, offering superior thermal management. The TGA2594-HM is ideally suited to support both commercial and military applications.

Both RF ports have integrated DC blocking capacitors and are fully matched to 50 Ohms.

Assembly Notes

1. Clean the board or module with alcohol. Allow it to dry fully.
2. Apply solder paste to each pin of the TGA2594-HM, and heat achieve reflow, being careful not to exceed the thermal budget.
3. Clean the assembly with alcohol.
4. To attain quoted RF performance, the following is required:
 - i. On the printed circuit board, there must be two 1 mm (0.0394") diameter openings on the backside (RF Ground Plane) of the circuit board.
 - Location of the openings is contained in the Q Evaluation Board layout.
 - The 1 mm diameter openings for the board are shown in the diagram below in reference to the base of the package.
 - ii. Use of a carrier plate with 2 mm (0.0787") diameter holes.
 - The holes should be located with respect to the package pin-out as shown in the diagram below.
 - The holes should be 4 mm deep.
5. To improve thermal performance, the following is recommended:
 - i. The use of a 4 mil indium shim between the circuit board and the carrier plate.
 - ii. The In shim should have the same hole diameter and positioning as the carrier plate (see diagram below for location with respect to the package backside). The holes should be machined fully through the In shim.
