

V-EA Miniature Circuit Breakers/Manual Motor Controllers

UL listed and CSA certified V-EA Manual Motor Controllers are horsepower rated and suitable as Motor Disconnect. They can also be used for AC General Use, AC Resistance, AC Discharge Lamps and AC Incandescent Lamps.

MA Three Phase Adjustable Trip Miniature Circuit Breakers/Manual Motor Controllers

UL listed MA Three Phase Adjustable Manual Motor Controllers have an adjustable thermal trip unit and are especially suitable for high inrush applications, such as transformers, motors, etc.

<i>Ordering and Technical Information</i>	26-27
---	-------

MS Three Phase Adjustable Trip Economy Manual Motor Controller

UL listed MS Three Phase Adjustable Manual Motor Controller is an economical alternative to the MA series. A wide range of accessories which includes: door mounting kit and enclosure, emergency stop attachments, etc.

<i>Ordering and Technical Information</i>	28-29
---	-------

FI Earth Leakage Circuit Breakers

Compact DIN Rail mount FI Earth Leakage Circuit Breakers detect and interrupt ground faults. They are VDE approved for the European system of protecting people, animals, equipment and property from dangerous line-to-ground and shock hazard currents. US applications include ground fault protection of equipment (GFPE), especially when high distributed capacitance or other leakages cause excessive nuisance trips at lower fault currents.

Single Motor Installation

Single Motor Installation

Altech's UL Listed Manual Motor Controllers

General

Altech's manual motor controller is UL listed. The UL Listed mark on the MCB is the manufacturer's representation that samples of the complete product have been tested by UL to be used for most common industrial applications. This superior UL mark allows for field installation without the need for UL investigation.

A competitor's UL recognized component mark on the MCB means that the component alone meets the requirements for a limited, specific use. These MCBs are not intended for separate installation in the field, they are intended for use as a component of complete equipment submitted to UL for investigation.

The **Altech**® UL508 Solutions Save money and panel space!

Motor Group Installation

**Altech's
Manual Motor Controllers
are approved for
Group Installations**

Field Installations

A licensed electrician can install UL508 Manual Motor Controllers for the following uses:

- AC Motor Starting (Across the line)
- AC General Use
- AC Resistance
- AC Discharge Lamps (Ballast)
- AC Incandescent Lamps (Tungsten)

Motor Branch Circuit Uses

(in accordance with NEC® Section 430)

UL508 Manual Motor Controller

- Disconnect Means/ Disconnect Switch
- Controller and Overload Protection Combination
- Controller and Disconnect Means Combination

UL 1077 supplementary protector

- None

Interchangeability

A UL Listed Manual Motor Controller can be used in place of UL 1077 Recognized supplementary protector, where UL allowed to use a supplementary protector for a specific application.

However a UL Recognized supplementary protector cannot be used in place of UL Listed Manual Motor Controller for a specific application.

V-EA MINIATURE CIRCUIT BREAKER/MANUAL MOTOR CONTROLLER

TRIP CURVE SELECTION GUIDE

Warning!

This information should only be used as a selection guide. The use of a Miniature Circuit Breaker/Manual Motor Controller in an application with a certain Trip-Characteristic always requires prototype testing! It is the responsibility of the circuit design engineer to select the appropriate Miniature Circuit Breaker/Manual Motor Controller for his specific application.

V-EA-C Trip 0.3A Through 10A Rated Current

V-EA-C Trip 13A Through 63A Rated Current

"C" Magnetic Trip Parameters

Rated current 0.3A to 63A.

1. Hold for a minimum of 100ms at surge of 5 times rated current.
2. Trip in under 100ms at 10 times rated current.

NB: Trip curves shown comply with North American standards. For trip curves according to European standards please consult Altech.

D-TRIP CHARACTERISTICS

Application Examples:

High inrush motors, transformers, power supplies, heaters and reactive loads. Relatively long thermal trip delay and very high magnetic trip point.

Prototype testing is recommended in motor applications where the relatively long thermal trip delay may not provide adequate motor overload protection. Motor-integral overload protectors are recommended, with the V-EA-D providing disconnect, backup thermal protection and additional short circuit and energy let-through protection.

V-EA-D Trip 0.3A Through 10A Rated Current

V-EA-D Trip 13A Through 63A Rated Current

"D" Magnetic Trip Parameters

Rated current 0.3A to 63A.

1. Hold for a minimum of 100ms at surge of 10 times rated current.
2. Trip in under 100ms at 16 times rated current.

NB: Trip curves shown comply with North American standards. For trip curves according to European standards please consult Altech.

E-TRIP CHARACTERISTICS

Application Examples:

High efficiency motors, which have exceedingly high inrush currents. Relatively short thermal trip delays and very high magnetic trip points.

Prototype testing is recommended. The V-EA-E is the result of continuous research and improvement of our G- and D-Trip circuit breakers. It combines the short thermal trip delay of the G-Trip and an even higher magnetic trip point than the D-Trip.

Therefore, the V-EA-E provides adequate motor overload and short circuit protection.

V-EA-E Trip 0.3A Through 10A Rated Current

V-EA-E Trip 12A Through 60A Rated Current

"E" Magnetic Trip Parameters
Rated Current, 0.3A to 50A (—),
60/63A (---).

Magnetic Trip:

1. Hold for a minimum of 100ms at surge of 14 times (60A, 10 times) rated current.
2. Trip in under 100ms at 18 times (60A, 14 times) rated current.

NB: Trip curves shown comply with North American standards. For trip curves according to European standards please consult Altech.

G-TRIP CHARACTERISTICS

Application Examples:

General industrial, including motors, some transformers, solenoids, control circuits, lighting and wiring. Meets the US trip norms with relatively short thermal trip delay and high magnetic trip point.

60/63	0.0018	0.0018	0.0017	0.00172	0.00179	—

Resistances listed are “hot” values, as opposed to cold start values. Operating voltage drop across the V-EA and power loss per pole can be approximated with basic formulas:

$$V_{\text{DROP}} = I_{\text{OPERATING}} \times R_{\text{TABLE}}$$

$$P_{\text{LOSS P/P}} = I_{\text{OPERATING}}^2 \times R_{\text{TABLE}}$$

Voltage drops should be reviewed when V-EAs with high internal resistance are used (e.g., load voltage minimums). Power loss should be reviewed when V-EAs with high rated currents are used (e.g., enclosure heating).

The listed V-EA internal resistance values should not be used in calculations of available short-circuit current downstream of the V-EA. The dynamic impedance of the V-EA under short-circuit conditions can vary significantly from internal resistance values in normal operation.

LINE CURRENT FREQUENCY EFFECTS ON TRIP CURVES

Frequency Effects on Magnetic Trip Curves					
Trip Curve	Trip Zone At 16 2/3 - 60Hz (x RC)	Trip Zone At 100 Hz (x RC)	Trip Zone At 200 Hz (x RC)	Trip Zone At 400 Hz (x RC)	Trip Zone At DC (x RC)
Z	2 - 3	2.2 - 3.3	2.4 - 3.6	2.8 - 4.2	3.0 - 4.5
B	3 - 5	3.3 - 5.5	3.6 - 6.0	4.2 - 7.0	4.5 - 7.5
C	5 - 10	5.5 - 11.0	6.0 - 12	7.0 - 14.0	7.5 - 15.0
G	8 - 10	8.8 - 11.0	9.6 - 12.0	11.2 - 14.0	12.0 - 15.0
D	10 - 16	11.0 - 17.6	12.0 - 19.2	14.0 - 22.4	15.0 - 24.0
E	14 - 18	15.4 - 19.8	16.8 - 21.6	19.6 - 25.2	21.0 - 27.0

The thermal trip is not affected by the frequency of the line current. The magnetic trip is within the trip zone of the characteristic curve for frequencies from 16 2/3 to 60Hz. At lower and higher frequencies, the magnetic trip will be delayed longer than indicated by the characteristic curve, roughly as follows:

At 100Hz: Mag. Trip Current = 1.1 x curve current

At 200Hz: Mag. Trip Current = 1.2 x curve current

At 400Hz: Mag. Trip Current = 1.4 x curve current

At DC: Mag. Trip Current = 1.5 x curve current

For example, at 16 2/3 - 60 Hz the magnetic trip zone for the “G” characteristic is 8 to 10 times the rated current of the specific V-EA (i.e., hold for at least 100ms at 8 x RC, trip in less than 100ms at 10 x RC). With a 400Hz current, a magnetic trip at 10 x RC would be greatly delayed (thermal would likely trip first), as the magnetic trip zone is now 11.2 to 14 x RC. If a quicker magnetic trip is required with 400Hz, the “B” or “C” characteristic should be considered.

INSTALLATION RECOMMENDATIONS

INTRODUCTION

The V-EA* easily snaps onto a readily available, international standard 35mm DIN Rail. Mounting can be in any position from full horizontal to full vertical without affecting performance.

All housings are the same size regardless of rated current, simplifying layout and modifications.

Line power feed can be to either top or bottom terminals. This provides flexibility to power distribution enclosure entry (top, bottom, sides) and internal raceway runs (e.g., power in one horizontal raceway can feed both the row above and the row below).

Minimal free space is required to remove or replace the V-EAs, and with standard housing and terminal sizes, ratings can be changed or multi-poles can replace multi-single pole or vice-versa. To obtain the highest density mounting arrangement without serious problems from heat build-up, see "Temperature Correction Curve" (page 22).

Altech and our distributors are pleased to quote custom rail assemblies. Multi-function assemblies can include cut-to-order DIN Rail, mounted V-EA and MA circuit breakers, FI Earth Leakage breakers, lightning/surge protectors, interface modules (cable fan-out, relays, I/O, power supply, etc.), terminal blocks with marking tags, and other control components to meet your specifications. Order assemblies with only one part number or even your drawing number.

DIN Rail Information

Mounting rails are internationally standardized and are available in several sizes with or without perforations. Zinc-plated yellow chromated steel is standard. Copper and aluminum DIN Rails are also available. Please contact Altech for your DIN Rail needs.

TS35 DIN Rail Perforations Dimensions $\pm 0.1\text{mm}$ (.003 in.)

SNAP-ON MOUNTING

1. Place the upper lip of the V-EA* under the upper lip of the rail.
2. Press down on bottom terminal area until the V-EA* spring-loaded clip snaps under lower lip of the rail.

* V-EA miniature circuit breaker handling is representative for MA circuit breakers and FI Earth Leakage circuit breakers.

EASY REMOVAL

Removal, One Pole

1. Insert tip of 4mm or less straight blade screwdriver into the slot of the metal retaining clip.
2. Brace the shank of the screwdriver against the terminal side of the V-EA* and gently lever the clip away from the DIN rail.
3. When the clip moves out, continue rotating screwdriver and V-EA* up and off of the bottom of the DIN rail lip.
4. Grasp V-EA* and lift upwards to disengage from the top lip of the rail, then remove.

WIRING

- Field wiring terminal size acceptability:
Top: 18-3 AWG
Bottom: 18-2 AWG
- Use 75°C insulation copper conductors only, loaded to 60°C ampacity.
- Wire conductor stripping length:
Top Terminals: 11.5mm (approximately 7/16")
Bottom Terminals: 12.5mm (approximately 1/2")
- For terminal screws, we recommend a #2 Phillips or Posidriv screwdriver. Terminals are also readily accessible to battery operated screwdrivers. Please contact Altech for tool and ordering information.
- Terminal tightening torque is rule-of-thumb 20 lb.in.

V-EA DIMENSIONS

General

Mounting in Enclosure

For note information see section below.

Not Shown: Width of Face (Thickness)
 One Pole 17.5mm (.69 in.)
 Two Pole 35mm (1.38 in.)
 Three Pole 52.5mm (2.07 in.)

ALTECH/SPELSBERG EK/AK NONMETALLIC ENCLOSURES FOR MCBS

NOTE 1: For totally enclosing the V-EA, the minimum interior depth of the enclosure is 70mm plus DIN Rail depth (7.5 or 15mm) plus any rail mounting stand-off depth.

NOTE 2: Fork lugs with a thickness up to 3mm can be inserted in the lower terminals under the head of the captive M5 (i.e. 5mm diameter to outside of threads) terminal screw.

NOTE 3A: The V-EA's raised face is sized to fit through standard European enclosure cut-outs, which allow sight and operation of the trip/reset handle but keep all wiring covered. As shown in Fig. 1, Altech/Spelsberg AK/EK nonmetallic enclosures are ready-made for this attractive and efficient packaging approach.

NOTE 3B: The V-EA was successfully short-circuit tested in TYPE 1 metal enclosures with the V-EA face extending through a 46mm cut-out in the cover. Typical applications include:

- V-EA on 35mm wide by 15mm deep DIN Rail, mounted to back wall of a 3 inch deep enclosure with no back panel.
- V-EA on 35mm wide by 7.5mm deep DIN Rail, mounted to the back panel of a 3 inch deep enclosure with panel.

Fig 1. Altech/Spelsberg EK/AK nonmetallic enclosure with Altech/ABL Sursum V-EA and MA Circuit Breakers installed.

MA Three Phase Adjustable Trip Miniature Circuit Breakers/ Manual Motor Controllers

The MA was designed to handle the high inrush loads of 3 phase transformers, power supplies, motors, etc. The MA protects wiring and equipment from damage caused by the three major classes of over-current, yet greatly reduces the number of nuisance trips in high starting and inrush current circuits.

An IEC device with excellent ratings under a UL listing at 480Y/277V (including group ratings) and at 500V under international standards, the Altech/ Sursum MA provides short and long term cost effective circuit protection for USA and/or export applications. The short term advantages include: (1) adjustable thermal trip allows finalization of initial designs before procurement of the load equipment is complete; (2) snap-on mounting for readily available, internationally standardized DIN Rail saves panel layout design time as well as installation and change labor; (3) large cage-clamp terminals with screws suitable to power screwdrivers, simplifies and speeds wiring; (4) convenient switched disconnect during factory testing and/or initial start-up saves time and aggravation. The key long term advantage is customer satisfaction and proven over-current protection of wiring and equipment (and the lack of rework/repair costs).

Note: **HEA - Horsepower Equivalent Amperes**, the nominal amperage assigned to standard motor horsepower ratings in design guide tables such as NFPA-70 Tables 430-148, 430-149, 430-150; UL1077 Table 16.2; CSA - C22.2 No. 235-M89 Tables 44 and 45; CSA-C22.2 No. 14-M91 Table 19, etc. Multiply HEA values (in parenthesis) by 1.1 if power factor is 90%, and by 1.2 if power factor is 80%.

^a The standard-circuit short-circuit rating is 14kA for all types. Group ratings can be used in a standard circuit (e.g., MA1.0U at 42kA), but a higher standard rating cannot be used in a group circuit (e.g., MA40U at 14kA only in standard circuit.)

DIMENSIONS

MA/USA Manual Motor Controller

TRIP CHARACTERISTICS MA/U

MS Three Phase Adjustable Trip Economy Manual Motor Controllers

with overload and short circuit protection,
phase failure sensitivity according to
IEC 947-4-1, DIN VDE 0660 Part 102

Due to its high breaking capacity with high current limitation the MS Manual Motor Controllers provide an optimum of protection for electrical motors as well as for other consumer units up to 25 amps. They are equipped with phase failure sensitivity, isolating and main switch functions; 13 ranges are covering nominal rated currents from 0.1 up to 25 amps.

The MS's are temperature compensated; the trip current of the magnetic part is $12 \times I_n$. The Manual Motor Controllers are built in accordance with IEC 947.

FI Earth Leakage Circuit Breakers

FI compact Earth Leakage Circuit Breakers detect and interrupt earth (ground) faults. They are VDE approved for the European system of protecting people, animals, equipment and property from dangerous line-to-ground and shock hazard currents.

US applications include ground-fault protection of equipment (GFPE) using the 10mA and 30mA fault current ratings, especially when high distributed capacitance or other leakages cause excessive nuisance trips at lower fault currents. Applications for the 300mA rating are equipment protection and fire prevention, limiting the energy of a fault to less than the minimum ignition energy for many materials.

Type Designation

Voltage Rating (maximum)	240VAC, 50/60Hz (VDE: 125/220VAC, 50Hz)	415VAC, 50/60Hz (400Hz available on request) (VDE: 220/380VAC, 50Hz)
Short Circuit Capacity	Up to rated current (RC) 40A = 1.5kA, RC 63A = 2kA. 10kA in combination with series fuse of European Operation Class gL/gG: RC 16A = 63A fuse, RC 20/40A = 80A fuse, RC 63A = 100A fuse.	
Fault Trip Current Calibration	FI trips are calibrated at less than fault trip current for ensured safety (Typical trip range between 66.6-83.3% fault trip current, e.g., typical trip at 20-25mA for fault RC of 30mA)	
Typical Life	Fully functional after 4,000 operations to DIN/VDE 0664 (CEE27) and 16000 additional fault current trips.	
Standard Pack and Weight	1/290g (0.64 lb.); 1/390g (0.86 lb.) with auxiliary contact	1/450g (1.0 lb.) 1/550g (1.21 lb.) with auxiliary contact
Terminal Size Acceptability	16-6 AWG	14-3 AWG
Equivalent Circuit		

^a For 2-Phase applications, terminal 5 and 6 (next to Neutral terminals) must be connected to one phase for the test circuit to be operable.

^b Provided with mounted Auxiliary Switch, one N.O., one N.C. isolated feedthrough contact (Form X double make and Y double break), which adds 9mm (.35 in.) to the width dimension.

Note: If the power system has a marked conductor, it must connect through the FI and not be grounded at any point downstream.

FI 2

FI 4

FI 2 and FI 4

Temperature Range	Environmental Information marked with "Snowflake" approval for -25°C to 40°C (-13°F to 104°F) ambient temperature. (Temperature effect on RC: for every 10°C temperature rise above 40°C decrease RC by 7%.)
Fluctuating Climate Conditions	To maximum 45°C, 95% relative humidity.
Electrical Shock Protection	Uninsulated electrically live parts within 30mm of the operating handle are "finger safe" (terminal screw heads) and uninsulated live parts within 100mm of the operating handle are "back-of-hand safe" (terminals).
Impact/Shock Protection	15g with impact force half-cycle sinusoidal and 11ms duration, 18 impacts total with 6 on each principal axis (3 impacts each face). FI is DIN Rail mounted during the test, and electrically loaded with 25% of Fault RC. Successful testing required no trip during the test, no damage and no loosened parts.
Vibration/Seismic Resistance	5g, at frequency of 55Hz to 2,000Hz, applied for 35 ± 5 minutes along each of the three principal axes, plus 5 minutes of application at every established critical resonant frequency. FI is DIN Rail mounted during the test, and loaded with 25% Fault RC. To pass, the FI did not trip at 25% Fault RC, but did trip between each of the principal axis tests when the fault current was raised to 125% Fault RC, and there was no damage and no loosened parts. Suitable for machinery and mobile vehicle applications.
Housing Class	Ingress Protection (IP) Class 40; internal working components and live parts (excluding terminals) are protected against ingress of solid objects greater than 1mm diameter (class 4-), but have no protection from ingress of water (class-0).
Non-Sinusoidal Fault	The FI is tested and approval stamped for tripping sensitivity to non-sinusoidal fault currents, which become zero or almost zero within one cycle of the line frequency. Waveforms and allowed trip-current ranges are as follows: - AC Sinusoidal Fault - 0.5-1.0 times Fault RC - Pulsating DC Fault; Positive and Negative Half-Waves - 0.35-1.4 times Fault RC - Phased Half-Wave, 90° - 0.25-1.4 times Fault RC Phased Half-Wave, 135° - 0.11-1.4 times Fault RC - Pulsating DC on 6mA DC (continuous) Base - Max. 1.4 times Fault RC + 6mA
Insulation Category	At VDE rated voltage, suitable for Class C environments with relatively high dust and moisture levels and little HVAC control, e.g., industrial, commercial, agricultural; on machine tools, hoists, warehouse equipment, etc.; in boiler rooms, unheated storage, covered shipping/receiving, open workshops, etc.

V-EA and MA Circuit Breaker Accessories

Accessories can be factory or field mounted on V-EA miniature circuit breakers and MA motor protection switches for enhanced control and monitoring capabilities. Field mounting kits include all necessary parts and instructions. Accessories can be gang mounted on a single breaker (the Auxiliary Switch in the outside position). The mounting arrangement links the internal latch-pins for the tripping mechanisms, ensuring simultaneous trips. Handles are linked to simplify manual resetting.

FA

FA110U^a	110V	0.25A	UL SF
FA110U^a	220V	0.5A	UL SF
FA110U^a	380VAC	0.8A	UL SF

Std.Pk.: 1

Unit Weight: 120 grams (0.27 lb.)

Width: 17.5mm (.689in.)

Coil actuated, the FA Shunt Trip allows electrical remote tripping of a breaker. It is trip-free and the housing and terminal specifications are the same as for V-EA miniature circuit breakers. The Shunt Trip contains its own contacts which break the tripping power circuit when tripped. It is available with trip-coils in most standard control voltages. The device is UL and CSA listed for general use.

UA

Undervoltage Trip

Type/ Cat. No.	Line Voltage 60Hz*
UA120	120VAC
UA208	208VAC
UA240	240VAC
UA277	277VAC
UA415	415VAC
UA480	480VAC

Std.Pk.: 1

Unit Weight: 70 grams (0.16 lb.)

Width: 17.5mm (.689in.)

Re-power your system under controlled conditions following a power loss or serious undervoltage. Altech/Sursum UA Undervoltage Trips are coupled to the tripping latch pins of the V-EA or MA to which they are attached, reliably producing trips at the drop-out voltage and preventing resetting when less than 85% line voltage is present. The Undervoltage Trip is provided with at least 6-inch pigtailed of stranded fixture wire for hook-up to the V-EA or MA line terminals.

- Reset-Hold Voltage = $0.85 \times V_e$
- Drop-Out Voltage = 0.35 to $0.7 \times V_e$

* Please consult Altech for your 50Hz application needs.

^aOne device with wide voltage range.

Two isolated, feedthrough Form X and Y contacts are provided: one with the same form as the breaker (HS designation, closed auxiliary contacts when breaker is on and breaker contacts are closed); and one with the opposite form as the breaker (HO designation, closed auxiliary contacts when breaker is tripped and breaker contacts are open). Upper level terminals are metal-stamped "HS" and lower level terminals are stamped "HO", providing clear identification for drawings and physical wiring (line/load on either terminal).

Altech/Sursum H Auxiliary Switch is suitable for logic interrogation and for use as a two-circuit Form C contact. It can also function as an auxiliary switch for control circuits. The H11U is UL and CSA listed for general use.

Lock-out ^①
Cat. No. EASS
Prevent inadvertent resetting of the V-EA or MA during maintenance.
Fits 1/4" pad lock.

Ring Tongue Terminals
Available for VE-A and MA series. Please specify when ordering and refer to type designation.

Busbar Systems

Please see pgs. 32-35 for your busbar needs.

Cooling Spacer

Cat. No. 15.960
See also Correction Curve, pg. 22.

^① V-EA and MA can also be locked in the on and off position by simply using a common lead or meter seal, which gets fed through the hole in the handle and a corresponding hole in the case housing.

Altech Busbar Systems

The Altech Busbar system is an innovative way to jumper up to 57 poles of Altech Miniature Circuit Breakers (MCB)/ Manual Motor Controllers (MMC).

The advantages of this jumper system are:

- Installation time savings
- Panel space savings
- Less or no maintenance
- High electrical ratings
- Customers can cut the busbar without losing the UL approval

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
