

‘S1D13717 Mobile Graphics Engine

February 2012

The S1D13717 is an Mobile Graphics Engine solution designed with support for the digital video revolution in mobile products. The S1D13717 contains an integrated camera interface, hardware JPEG encoder/decoder and SD Memory Card interface. Seamlessly connecting to both direct and indirect CPU interfaces, it provides support for up to two LCD panels. The Mobile Graphics Engine supports all standard TFT panel types, eliminating the need for an external timing control IC. The S1D13717, with it’s 224K bytes of embedded SRAM and rich feature set, provides a low cost, low power, single chip solution to meet the demands of embedded markets requiring Digital Video, such as Mobile Communications devices and Palm-size PDAs.

Additionally, products requiring a rotated display can take advantage of the SwivelView™ feature which provides hardware rotation of the display memory transparent to the software application. The S1D13717 also provides support for “Picture-in-Picture Plus” (a variable size window with overlay functions). Higher performance is provided by the Hardware Acceleration Engine which provides 2D BitBLT functions.

The S1D13717 provides impressive support for cellular and other mobile solutions requiring Digital Video support. However, its impartiality to CPU type or operating system makes it an ideal display solution for a wide variety of applications.
