

Broadband powerline communication SoC optimized for audio/video streaming and consumer applications

Datasheet - production data

- Master/slave SSI
- Two independent UARTs
- Fast IrDA[®]
- Real-time clock
- Configurable serial port (SPORT) interface for external DSP and audio codec (ADC and DAC) in I²S mode
- Transport stream interface (video TS)
- Vectored interrupt controller (VIC)
- JTAG (IEEE1149.1) interface
- Three CPU instruction sets

Features

- Configurable HW engine for multiple HomePlug[®] PHY and real-time MAC layers processing supporting:
 - HomePlug AV and 1.0 standards
 - HomePlug Green PHY[™] standard
- Integrated analog front-end
- ARM926EJ-S[™] 32-bit RISC CPU up to 333 MHz
- 8/16 bit DDR mobile at 166 MHz and DDR2 at 333 MHz memory controller
- Serial memory interface
- 8/16-bits NOR Flash/NAND Flash and SRAM memories controllers
- Multichannel DMA controller
- Ethernet 10/100 MAC with MII interface
- USB 2.0
- PCI Express and S-ATA
- Color LCD (CLCD) controller
- JPEG codec accelerator
- Cryptographic coprocessor
- Up to 40 GPIOs
- Enhanced I²S (digital audio interface)
- I²C master/slave mode

Applications

The SStreamPlug ST2100 is configurable for a wide range of consumer and industrial^(a) powerline applications such as:

- Smart gateway
- Powerline communication bridging, including wireless
- Smart grid
- Electric vehicle charging station^(a)
- In house audio/video distribution
- Video surveillance
- Home automation
- “Network Area Storage” (NAS)
- Display panels control

Table 1. Device summary

Order code	Operating temp. range	Package	Packing
ST2100	-40 to +85 °C	TFBGA 12 x 12 x 1.2 mm, pitch 0.5 mm	Tray, tape and reel

a. Not intended for automotive usage .

1 Description

The SStreamPlug ST2100 device is the STMicroelectronics® “Broad Band Powerline Communication” (BB PLC) solution, based on the powerful ARM926EJ-S™ processor (up to 333 MHz), widely used in applications where high computation performance is required, such as consumer (“Home Area Network” or HAN), industrial and smart grid applications.

In addition, the SStreamPlug ST2100 has a memory management unit (MMU) that allows virtual memory management - making the system compliant with the Linux® operating system. It also offers 16 Kbyte of data cache, 32 Kbyte of instruction cache, JTAG and ETM™ (Embedded Trace Macrocell™) for debug operations.

A large set of peripherals allows a wide flexibility of the usage of the system in most of the possible PLC broadband applications (indoor and outdoor).

2 Main features

- Configurable hardware engine for multiple HomePlug PHY and real-time MAC layers
 - HomePlug™ AV and 1.0 standards
 - HomePlug Green PHY standard
- Integrated analog front-end
 - Programmable gain amplifier: gain range -12 dB to 48 dB
 - ADC and DAC
 - 2.5 V voltage regulator
 - Zero crossing (ZC) comparator
- ARM926EJ-S™ 32-bit RISC CPU up to 333 MHz
 - 16 Kbyte if instruction cache, 16 Kbyte of data cache
 - 32 Kbyte of instruction TCM and 16 Kbyte of data TCM
 - Three instruction sets: 32-bit for high performance, 16-bit (Thumb®) for efficient code density, bytecode Java™ mode (Jazelle™) for direct execution of Java code
 - AMBA™ bus interface with f_{MAX} 166 MHz
- 48 Kbyte on-chip boot ROM
- 8 Kbyte on-chip SRAM
- 8/16 bit DDR mobile at 166 MHz and DDR2 at 333 MHz memory controller
- Serial memory interface
- 8/16-bits NOR Flash/NAND Flash and SRAM memory controller
- Boot capability from NAND Flash, serial/parallel NOR Flash, and UART
- Multichannel DMA controller (8 FIFOs and 16 dedicated channels)
- Ethernet 10/100 MAC with MII interface (IEEE 802.3), RevMII, IEEE 802.1-AS and 802.1-Qav for audio video (AV) traffic
- USB 2.0 (high-full-low speed) port with an integrated PHY able to work as a host or device
- PCI Express GEN1 (PCI Express standard version 1.1), single lane X1 dual mode (both “Root Complex” and “Endpoint” modes supported), the PHY is a standard 8-bit/16-bit PIPE PHY interface. This peripheral supports also the serial ATA compliant with the SATA/150.
- Color LCD controller (up to 1024 x 768 resolution at 24 bpp true color, STN/TFT display panels)
- JPEG codec accelerator (1 clock/pixel)
- Cryptographic coprocessor (DMA based programmable engine) with support for:
 - Advanced encryption standard (AES) cipher (128, 192, 256 bit keys) in ECB, CBC, CTR modes
 - Data encryption standard (DES) and triple DES (TDES) cipher in ECB and CBC modes
 - SHA-1, HMAC-SHA-1, SHA-256, HMAC-SHA-256, MD5, HMAC-MD5 digests
- Up to 40 GPIOs (multiplexed with peripheral I/Os), all the I/Os have interrupt capability, 24 application specific GPIOs: four I/Os support PWM and four I/Os support double PWM features.

- Enhanced I²S for 4-channel “Digital Audio Interface” (DAI)
- Master/slave SSP (Motorola SPI, Texas Instruments, National Semiconductor protocols) up to 5 Mbits/s in slave mode and up to 20 Mbits/s in master mode
- I²C master/slave mode
- Two independent UARTs supporting hardware (HW) flow control
- Fast IrDA (SIR/MIR/FIR)
- Three pairs of 16-bit general purpose timers with programmable 8-bit prescaler
- Real-time clock (RTC)
- Configurable serial port (SPORT) interface for external DSP and audio codec (ADC and DAC in I²S mode)
- Transport stream interface (Video TS also called “Synchronous peripheral bus”) for external MPEG- 2/H.264 encoder and decoder. TS port also implements image sensor interface (CCD camera)
- Watchdog timer
- Clock synthesizer (4 outputs)
- Vectored interrupt controller (VIC)
- JTAG (IEEE1149.1) interface
- ETM9 interface
- Multichannel cryptographic coprocessor. DES/TDES and AES security for the powerline link
- PGC (IR) interface
- Supply voltages: 1.2 V core, 1.8 V / 2.5 V DDR, 2.5 V AFE and PLLs, 1.5 V RTC and 3.3 V I/Os
- Available in a TFBGA373 package (12 x 12 x 1.2 mm, pitch 0.5 mm).

3 Architecture description

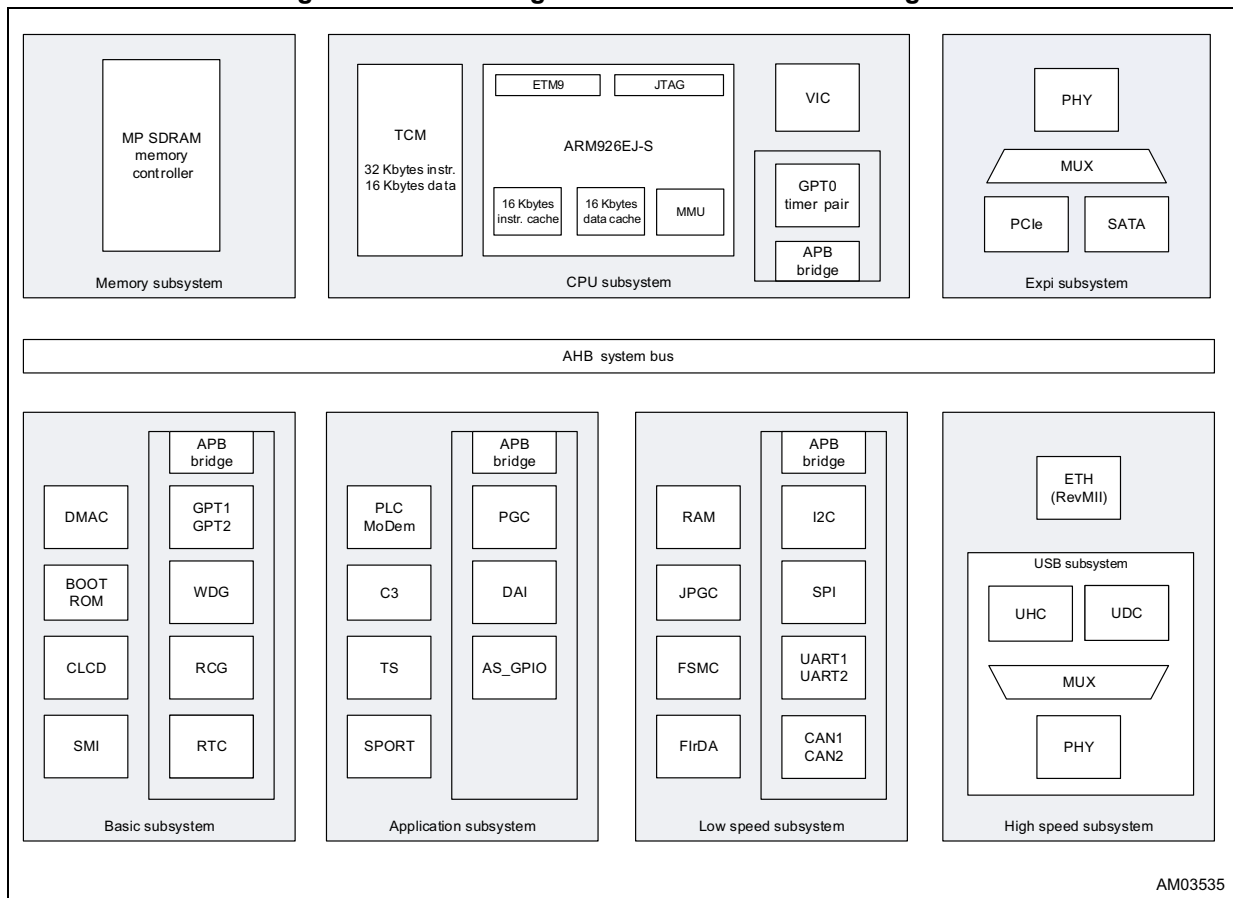

Figure 1 is the architecture overview of the SStreamPlug ST2100.

The internal architecture is based on several shared subsystems interconnected through a multilayer system bus.

The bus structure allows different subsystem data flows to be executed in parallel improving the core platform efficiency.

High performance master agents are directly interconnected with the memory controller reducing the memory access latency.

Figure 1. SStreamPlug ST2100 functional block diagram

3.1 CPU subsystem

- ARM926EJ-S™ running at 333 MHz with:
 - MMU
 - 16 Kbyte of instruction cache
 - 16 Kbyte of data cache
 - 32 Kbyte of instruction “Tightly Coupled Memory” (TCM)
 - 16 Kbyte of data “Tightly Coupled Memory” (TCM)
 - AMBA bus interface
 - JTAG
 - ETM9 (Embedded Trace Macrocell) for debug, medium size version
- Interrupt controller managing sources which are prioritized and vectorized

3.2 System bus

The system bus structure allows different subsystem data flows to be executed in parallel improving the core platform efficiency.

High performance master agents are directly interconnected with the memory controller reducing the memory access latency. The overall memory bandwidth assigned to each master port can be programmed and optimized through an internal efficient weighted round-robin arbitration mechanism.

Table 2 shows the system bus scheme and Table 3 is the key to its contents.

Table 2. System bus connectivity

		CPU	PCIe/SATA	DMA 1	DMA 2	Eth.	TS/SPORT	UHC/JDC	PLC modem	Crypto	CLCD
Targets (slave ports)	MP SDRAM	X	X	X	X	X	X	X	X	X	X
	Low speed	X	X	X							
	Application	X	X		X						
	Basic	X	X								
	High speed	X	X								
	Expi	X			X						

Table 3. Key to system bus connectivity matrix

Format	Definition
Grey box	No connection exists between target and initiator
X	A connection exists between target and initiator

3.3 Memory subsystem

The multiport memory controller within the memory subsystem manages DDR mobile up to 166 MHz and DDR2 up to 333 MHz external memory. Internally, it handles 5 ports supporting all the chip master ports.

The multiport memory controller block has a programmable arbitration scheme and the transactions happen on a different layer from the main bus. It also offers a local FIFO to increase the throughput and reduce the latency.

3.4 Expi subsystem

- PCI Express Gen1 (PCI Express standard version 1.1) single lane X1 dual mode
 - Root Complex mode is supported.
 - Endpoint mode is supported.
- Serial ATA compliant with SATA/150 specifications
- PHY is standard 8-bit/16-bit PIPE PHY interface

3.5 Basic subsystem

- 8 FIFOs and 16 high performance DMA channels with two AHB interfaces to parallelize the activity when two channels are working at the same time.
- 48 Kbytes of ROM (for boot procedure)
- “Serial Memory Interface” (SMI) supporting external serial Flash.
- Color LCD controller (CLCD) up to 1024 x 768 resolution at 24 bpp (true color) supporting STN/TFT display panels
- Three pair of 16 bit general purpose timers with programmable prescaler
- Watchdog timer
- RTC with separate power supply allowing battery connection
- Up to 104 “Multi-Function” I/Os (MFIOs) multiplexed with peripheral I/Os:
 - Allows a large number of possible application scenarios
 - Up to 40 GPIOs with interrupt capability
- System controller, reset and clock generation, and miscellaneous registers array allowing a full configurability of the system.

3.6 High-speed connectivity subsystem

- Ethernet 10/100 MAC with MII interface (IEEE 802.3), with external PHY
 - RevMII (supporting 25 and 50 MHz clock frequencies)
 - IEEE 802.1-AS and 802.1-Qav for audio video (AV) traffic
- USB 2.0 (high-full-low speed) port with integrated PHY able to work as a host or device. The PHY is embedded.
 - One USB host controller compatible with USB 2.0 high-speed specification managing a single port. The peripheral has a dedicated channel to the multiport memory controller and a dedicated slave port for CPU programming (OHCI and EHCI).
 - One USB device compatible with USB 2.0 high-speed specifications. A dedicated channel connects the peripheral with the multiport memory controller and registers and an internal FIFO are accessible from the CPU through the main AHB bus. A USB plug detector block is also available to detect the presence of the VBUS voltage.

3.7 Low-speed connectivity subsystem

- Two independent UARTs supporting hardware flow control up to 460.8 Kbits/s
- Fast IrDA controller with a speed rate from 9.6 Kbits/s to 4 Mbits/s (SIR/MIR/FIR)
- One synchronous “Serial Port Interface” (SPI) controller capable of operating as a master or a slave (Motorola - Texas Instruments - National Semiconductor) with a speed (data) rate up to 20 Mbits/s
- One I²C (also known as a digital audio interface) controller capable of operating in master and slave mode and covering all the possible data rates (high, fast and low)
- JPEG codec accelerator (1 clock per pixel)
- 8 Kbytes of static RAM
- “Flexible Static Memory Controller” (FSMC) supporting:
 - Asynchronous parallel NAND and NOR Flash memories
 - Synchronous and asynchronous SRAM
- Two independent “Controller Area Network” (CAN) interfaces compliant with CAN protocol version 2.0 parts A and B (up to 1 Mbit/s).

3.8 Application subsystem

- Configurable hardware engine for multiple HomePlug PHY and real-time MAC layers processing supporting:
 - HomePlug AV and 1.0 standards
 - HomePlug Green PHY standard
- Integrated analog front-end:
 - Programmable gain amplifier: gain range -12 dB to 48 dB
 - ADC and DAC
 - 2.5 V, 150 mA voltage regulator
 - Zero crossing (ZC) comparator
- Cryptographic coprocessor channels (C3), DMA based programmable engine, with support for:
 - Advanced encryption standard (AES) cipher (128-, 192-, 256-bit keys) in ECB, CBC, CTR modes
 - Data encryption standard (DES) and triple DES cipher in ECB and CBC modes
 - SHA-1, HMAC-SHA-1, SHA-256, HMAC-SHA-256, MD5, HMAC-MD5 digests algorithms
- Configurable serial port (SPORT) interface for external DSP and audio codec (ADC and DAC in I²S mode)
- Transport stream (TS) interface
- Pulse generator and capture (PGC) (IR) for remote controls
- 4-channel I²S [“Digital Audio Interface” (DAI)]
- 24 application specific GPIOs:
 - Up to 4 GPIOs supporting PWM
 - Up to 4 GPIOs supporting double PWM.

3.9 Clock and reset system

- The system clocks are generated by:
 - Two fully programmable PLLs. One is used to generate a clock for CPU and AMBA AHB bus and the other is used in case the DDR clock has to be different (asynchronous) with respect to the CPU clock.
 - One “high precision” clock synthesizer with 4 outputs providing different frequencies for the various IPs
- Fully programmable control of the clock and reset signals for all the slave blocks allowing sophisticated power management.

4 Pin descriptions

From [Table 4](#) to [Table 15 on page 21](#) and [Table 16](#) in [Section 5 on page 30](#) describe the SStreamPlug ST2100 pinouts.

4.1 Dedicated pins

Table 4. Master clock RTC, RESET and 3.3 V comparator pin descriptions

Group	Signal name	Ball	Direction	Function	Pin type
Master clock	RCG_MCLK_A	AB18	In	24 MHz (typical) crystal in	Oscillator 2.5 V capable
	RCG_MCLK_ZO	AB19	Out	24 MHz (typical) crystal out	Oscillator 2.5 V capable

DDR_DATA_15	B18			
DDR_DQS_1	A18	Out	Upper data strobe	Differential Compatible with DDRI (SSTL2) and DDRII (SSTL18)
DDR_NDQS_1	A19			
DDR_DM_1	B16	Out	Upper data mask	Compatible with DDRI (SSTL2) and DDRII (SSTL18)
DDR_GATE_1	B17	I/O	Upper gate open	
VREF_DDR	D13	In	Reference voltage	Analog 1.8 V
DDR2_EN	B5	In	Configuration	TTL input buffer, 3.3 V tolerant, with PU
COMP_1V8_ANAREXT	B6	Power	External resistor for 1.8 V I/Os compensation	Analog 1.8 V capable
COMP_1V8_GNDBGCOMP	C6	Power	Return for external resistor for 1.8 V I/Os compensation	Power

4.2 Shared I/O pins (MFIOs)

The 104 MFIOs can be configured in different modes. This allows the SStreamPlug ST2100 to be tailored for various applications.

For the MFIO from 88 to 103, the signal specified in [Table 16](#) is also conditioned by an internal selection MUX that can choose among the specified signal and an internal basic subsystem general purpose IO (BS_GPIO), as specified in the SStreamPlug ST2100 manual and shown in [Figure 2](#) and [Figure 3](#).

Figure 2. MIFO 0-87 muxing scheme

Figure 3. MIFO 88-103 muxing scheme

Table 16. MFIO pin descriptions

Ball no.	Signal name	Muxing selection					
		0	1	2	3	4	5

4.3 Required external components

- COMP_1V8_ANAREXT: place an external 121 K Ω 1% resistor between the ball B6 and ball C6
- USB_TXRTUNE: connect an external 43.2 Ω 1% pull-down resistor to the ball AB14
- COMP_3V3_ANAREXT: place an external 121 K Ω 1% resistor between the ball A21 and ball A22
- PCIe_REFRES: place an external 487 Ω 1% resistor between the ball R20 and ball M21 (if using PCIe interface)
- DAC_REXT: place an external 7.87 K Ω 1% resistor between the ball V22 and ball U22
- DAC_IDAC, DAC_IDACB: place an external 1% accuracy load resistor between the ball V23 and ball U23 to ground.

5 Memory map

The memory map is shown in [Table 17](#).

Table 17. Memory map description

Start Address	End Address	Peripheral	Description
0x00000000	0x3FFFFFFF	External SDRAM	DDR2
0x40000000	0xBFFFFFFF	PCIe data	-

6 Clocking parameters

This section details clock related electrical specifications.

6.1 Master clock (MCLK)

The external circuit for generating the clock from a crystal oscillator is shown in [Figure 4](#).

Figure 4. MCLK crystal connections

1. C_{L1} and C_{L2} are the load capacitors.

The value of the capacitors depends on the type of the selected crystal. To calculate the value of the load capacitance, use [Equation 1](#).

For this example, an Aker C2E-24.000-12-3030-X 24 MHz oscillator has been used.

Load capacitance C_L :

Equation 1

$$C_L = (C_{L1} \times C_{L2} / C_{L1} + C_{L2}) + C_S$$

Where C_{L1} and C_{L2} are the load capacitors and C_S is the circuit's stray capacitance.

In our application this implies:

Equation 2

$$C_{L1} = C_{L2} = C_{ext}$$

Equation 3

$$C_{ext} = (C_L - C_S) \times 2$$

Example

For the Aker[®] C2E-24.000-12-3030-X crystal:

$$C_L = 12 \text{ PF}; \text{ with } C_S = 3 \text{ PF}, C_{ext} = C_{L1} = C_{L2} = 18 \text{ PF}.$$

Note: The ESR of the used quartz must be $< 50 \Omega$.

6.2 Real-time clock (RTC)

The external circuit for generating the real-time clock from a crystal oscillator is shown in [Figure 5](#).

Figure 5. RTC crystal connection

1. C_{L1} and C_{L2} are the load capacitors.

The value of the capacitors depends on the type of the selected crystal. For example, using a FOX Electronics[®], P/N NC26LF-327 32.768 KHz oscillator, the value of the capacitors is 15 pF. The oscillator may not start if a crystal (FOX P/N FX325BS) is used.

If the shunt capacitance (C_o) of the crystal is ~ 7.0 pF, then the maximum ESR of the crystal must be less than 50Ω .

6.3 PCIe/SATA clock

For SATA operation, the PCIE_XTAL1/PCIE_XTAL2 clock inputs can be implemented by a 30 MHz crystal oscillator as shown in [Table 18](#).

For PCIe operation, a suitable clock driver such as IDT IDT_9FG104 can be used.

Table 18. EXPI clock characteristics

Symbol	Parameter	Min.	Typical	Max.	Unit
f_{osc}	PCIE_XTAL1/PCIE_XTAL2 clock input frequency for SATA configuration	-	30	-	MHz
	PCIE_XTAL1/PCIE_XTAL2 clock input frequency for PCIe configuration	-	100	-	

7 Electrical characteristics

This section provides electrical specifications for the SStreamPlug ST2100 device.

7.1 Absolute maximum ratings

This product contains devices to protect the inputs against damage due to high/low static voltages. However it is advisable to take normal precaution to avoid application of any voltage higher/lower than the specified maximum/minimum rated voltages.

The absolute maximum ratings shown in [Table 19](#) are the maximum stress that can be applied to a device without causing permanent damage. However, extended exposure to minimum/maximum ratings may affect long term device reliability.

Table 19. Absolute maximum rating

Symbol	Parameter	Min.	Max.	Unit
V _{DD} 1.2	Supply voltage for the core	-0.3	1.32	V
V _{DD} 3.3	Supply voltage for the I/Os	-0.3	3.63	V
V _{DD} 2.5	Supply voltage for the DDR/AFE	-0.3	2.75	V
V _{DD} 1.5	Supply voltage for the real-time clock	-0.3	2.75	V
T _{STG}	Storage temperature	-55	150	°C
T _J	Junction temperature	-40	125	°C

7.2 Power consumption

In [Table 20](#) and [Table 21](#) power consumption data are based on bench measurements with devices using the Linux OS, the CPU and DDR2 running at 333 MHz and all on-chip peripherals and internal modules enabled while the SStreamPlug ST2100 is transferring a file from the USB Flash memory to the powerline.

Table 20. Power consumption

Symbol	Parameter	Typical	Unit
PD (core supply)	Power consumption of 1.2 V supply voltage for the core	460	mW
PD (IO supply)	Power consumption of 3.3 V supply voltage for the I/Os	270	mW
PD (AFE supply)	Power consumption of 2.5 V supply voltage	260	mW
PD (DDR supply)	Power consumption of 1.8 V supply voltage for the DDR interface	170	mW
PD (RTC supply)	Power consumption of 1.5 V supply voltage for the RTC	9	μW

Table 21. Power consumption using 2.5 V internal LDO

Symbol	Parameter	Typical	Unit
P_D (core supply)	Power consumption of 1.2 V supply voltage for the core	460	mW
P_D (IO supply)	Power consumption of 3.3 V supply voltage for the I/Os	630	mW
P_D (DDR supply)	Power consumption of 1.8 V supply voltage for the DDR interface	170	mW
P_D (RTC supply)	Power consumption of 1.5 V supply voltage for the RTC	9	μ W

7.3 DC electrical characteristics

The recommended operating conditions are listed in [Table 22](#) and [Table 23](#).

Table 22. Recommended operating conditions

Symbol	Parameter	Min.	Typical	Max.	Unit
$V_{DD1.2}$	Supply voltage for the core	1.08	1.2	1.32	V
$V_{DD3.3}$	Supply voltage for the I/Os	2.97	3.3	3.63	V
$V_{DD2.5}$	Supply voltage for the analog peripherals	2.25	2.5	2.75	V
$V_{DD1.8/2.5}$	Supply voltage for the DDR	-10%	2.5 V / 1.8 V	+10%	V
$V_{DD1.5}$	Supply voltage for the RTC	1.3	1.5	2.0	V
$V_{DD3.3 REG}$	Supply voltage for 2.5 V linear regulator	2,97	3.3	3.63	V

Table 23. Thermal recommended ratings

Symbol	Parameter	Min.	Max.	Unit
T_{STG}	Storage temperature range	-55	150	$^{\circ}$ C
T_J	Junction temperature	-40	125	-
T_a	Ambient temperature	-40	85	-

Thermal simulations should be done to verify if additional cooling is required. These simulations should take into account power consumption, PCB dissipation, air flow and/or heatsinks. The SStreamPlug device can perform correctly above the specified ambient temperature range if the maximum junction temperature remains below 125 $^{\circ}$ C.

7.4 Power-up and reset sequence

The master reset (MRESET) must be released after the $V_{DD2.5}$ power supply is stable for a time interval of 2 ms, which is the start-up time of the main oscillator, as illustrated in [Figure 6](#).

7.5 Internal 2.5 V linear regulator

The internal linear regulator specified in [Table 24](#) provides a regulated 2.5 V power supply for on-chip AFE, OSCI, PLL, USB PHY, PCIe PHY and SYNTH functional blocks.

The 2.5 V regulator cannot be used to supply external devices.

Table 24. Internal 2.5 V voltage regulator specifications

Symbol	Parameter	Min.	Typical	Max.	Unit
$V_{DD3.3\text{ REG}}$	Supply voltage for 2.5 V linear regulator	2.97	3.3	3.36	V
$V_{DD2.5\text{ REG}}$	Output voltage of 2.5 V linear regulator	2.25	2.5	2.75	V
$I_{LOAD2.5\text{ REG}}$	Output current of 2.5 V linear regulator	-	-	150	mA

8 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK specifications, grade definitions and product status are available at: www.st.com. ECOPACK is an ST trademark.

8.1 TFBGA 12 x 12 x 1.2 mm package information

Figure 7. TFBGA 12 x 12 x 1.2 mm, 324 + 49 balls, 4R23 x 23, pitch 0.5 mm, ball 0.3 mm package outline

1. The terminal A1 corner must be identified on the top surface by using a corner chamfer, ink or metalized markings, or other feature of package body or integral heatslug. A distinguishing feature is allowable on the bottom surface of the package to identify the terminal A1 corner. Exact shape of each corner is optional.

Table 25 lists the mechanical data for the package shown in Figure 7.

Table 25. TFBGA 12 x 12 x 1.2 mm, 324 + 49 balls, 4R23 x 23, pitch 0.5 mm, ball 0.3 mm package mechanical data

Symbol	Dimensions (mm)			Note
	Min.	Typical	Max.	
A	-	-	1.20	(1)
A1	0.15	-	-	-
A2	-	0.20	-	-
A4	-	0.585	-	-
b	0.25	0.30	0.35	(2)
D	11.85	12.00	12.15	-
D1	-	11.00	-	-
E	11.85	12.00	12.15	-
E1	-	11.00	-	-
e	-	0.50	-	-
Z	-	0.50	-	-
ddd	-	-	0.08	-
eee	-	-	0.15	(3)
fff	-	-	0.05	(4)

- The total profile height (dim. A) is measured from the seating plane to the top of the component. The maximum total package height is calculated by the following methodology:
 $A1\text{ typ.} + A2\text{ typ.} + A3\text{ typ.} + \sqrt{A1^2 + A2^2 + A3^2}$ tolerance values.
 Thin profile: $1.00 < A < 1.20$ mm / fine pitch: $e < 1.00$ mm pitch.
- The typical ball diameter before mounting is 0.30 mm.
- The tolerance of position that controls the location of the pattern of balls with respect to datums A and B. For each ball there is a cylindrical tolerance zone "eee" perpendicular to datum "C" and located on true position with respect to datums "A" and "B" as defined by "e". The axis perpendicular to datum "C" of each ball must lie within this tolerance zone.
- The tolerance of position that controls the location of the balls within the matrix with respect to each other. For each ball there is a cylindrical tolerance zone "fff" perpendicular to datum "C" and located on true position as defined by "e". The axis perpendicular to datum "C" of each ball must lie within this tolerance zone. Each tolerance zone "fff" in the array is contained entirely in the respective zone "eee" above. The axis of each ball must lie simultaneously in both tolerance zones.

The TFBGA ("Thin profile Fine Pitch Ball Grid Array") package uses a grid of solder balls as its connectors. The TFBGA package is noted for its compact size, high lead count and low inductance, which allows lower voltages to be used.

Table 26 lists thermal characteristics for the TFBGA package.

Table 26. TFBGA package thermal characteristics

Symbol	Parameter	Value	Unit
$\Theta_{JA}^{(1)}$	Thermal resistance junction to ambient	33	°C/W

- Measured on a JESD51 2S2P test board.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкуренспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
