

## Dual Output Power Switch with Inverting Input

### FEATURES

- Two Output Power Switches
- Total Output Drive — 200 mA Continuous
- 9-V to 35-V Supply Voltage Range
- Low Side or High Side Switch Configuration
- User Programmable Phasing of Output Switches
- Internal Output Over Voltage Clamp For Driving Inductive Loads

Pb-free Available

- Current Limit Protection
- Thermal Shutdown Protection
- UVLO With User Programmable Time Delay

### APPLICATIONS

- Optical Detectors for Factory Automation

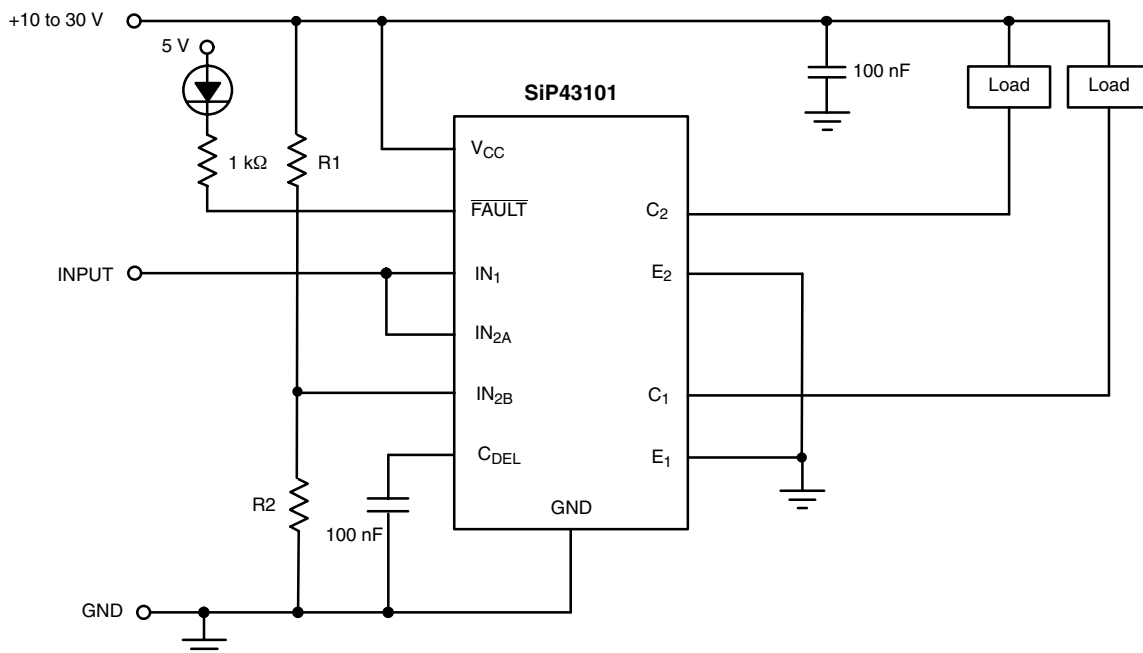

### DESCRIPTION

SiP43101 is a dual power switch IC which contains all control and power switching circuitry required to drive resistive and inductive loads in industrial applications. The output switches are NPN power transistors which can be configured as either high-side or low-side switches. These switches can operate from voltages as high as 35 V and have a continuous output current rating of 200 mA, combined or individually. Internal zener diodes are provided to clamp the power switch voltages to safe levels when driving inductive loads. The IN1 pin is a non-inverting input which controls the output of switch 1. A 2-input Exclusive OR gate input controls switch 2, allowing

switch 2 to be controlled by either an inverting or non-inverting control signal. SiP43101 contains under voltage lockout, UVLO, a user definable turn on delay, current limit, short circuit protection, and thermal shutdown.

The SiP43101 is available in both standard and lead (Pb)-free 16-pin TSSOP and PowerPAK® MLP-44 packages, which are specified over the industrial, D suffix (–40 to 85°C) temperature range.

### TYPICAL APPLICATION CIRCUIT

Both Switches Configured as Low-Side, Switch 2 Inverted With Respect to Switch 1, R1 +R2 Set Logic High

## ABSOLUTE MAXIMUM RATINGS

$V_{CC}$ .....	35 V
C1, E1, C2, E2 .....	35 V
C1-E1, C2-E2 (clamped by internal circuitry) .....	52 V
Output Current	
Continuous for one Output .....	200 mA
Peak for one Output .....	1.3 A
FAULT Output Current .....	10 mA
FAULT Output Voltage .....	-0.3 V to $V_{CC} + 0.3$ V
$IN_1$ , $IN_{2A}$ , $IN_{2B}$ .....	-0.3 V to $V_{CC} + 0.3$ V
Storage Temperature .....	-65 to 150 °C
Operating Junction Temperature .....	125 °C

Power Dissipation	
TSSOP-16 <sup>a</sup> @ 85 °C .....	440 mW
PowerPAK MLP44-16 <sup>b</sup> @ 85 °C .....	850 mW
Thermal Impedance ( $\theta_{JA}$ )	
TSSOP-16 <sup>c</sup> .....	90 °C/W
PowerPAK MLP44-16 <sup>d</sup> .....	47 °C/W

### Notes

- Derate 11.1 mW/°C
- Derate 21.3 mW/°C
- Device mounted on JEDEC compliant two layer test board.
- Device mounted on JEDEC compliant four layer test board.

Currents are positive into, negative out of the specified terminal.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## RECOMMENDED OPERATING RANGE

$V_{CC}$ .....	9 to 32 V	Operating Temperature Range .....	-40 to 85 °C
----------------	-----------	-----------------------------------	--------------

PIN DESCRIPTION			
Pin Number		Name	Function
TSSOP-16	MLP44-16		
1	15	V <sub>CC</sub>	Positive Supply Voltage
2	16	FAULT	Open collector output that is switched low on in the event of Short Circuit or Thermal Shut Down.
3	1	C <sub>DEL</sub>	Connection for the external capacitor controlling the turn on delay.
4, 10, 12, 13, 15	3, 7, 10, 11, 14	NC	No connection
5	2	GND	Ground Pin.
6	4	IN <sub>2B</sub>	Input to the Exclusive OR controlling power switch 2.
7	5	IN <sub>2A</sub>	Input to the Exclusive OR controlling power switch 2.
8	6	IN <sub>1</sub>	Input controlling power switch 1.
9	8	C <sub>1</sub>	Collector of power switch 1.
11	9	E <sub>1</sub>	Emitter of power switch 1.
14	12	E <sub>2</sub>	Emitter of power switch 2.
16	13	C <sub>2</sub>	Collector of power switch 2.

## DETAILED PIN DESCRIPTION

### C<sub>DEL</sub>

A capacitor connected to this pin is used to set the duration the turn on delay. The delay starts after the UVLO threshold has been reached.

### IN<sub>1</sub>

This pin controls the state of the output NPN switch 1. A Logic 0 holds the switch off while a Logic 1 turns the switch on.

### IN<sub>2A</sub>, IN<sub>2B</sub>

These pins are the inputs to the Exclusive OR gate that controls the state of the output NPN switch 2. This allows the use of either a non-inverting or an inverted signal to control the switch. Refer to the truth table for the logic function description.

IN <sub>2A</sub>	IN <sub>2B</sub>	SWITCH 2
Low	Low	Off
Low	High	On
High	Low	On
High	High	Off

### E<sub>1</sub>

This pin is the emitter of Switch 1. This pin is connected to the load in the High-Side Switch configuration, and is connected to Ground in the Low-Side configuration.

### E<sub>2</sub>

This pin is the emitter of switch 2. This pin is connected to the load in the High-Side switch configuration, and is connected to Ground in the Low-Side configuration.

### C<sub>1</sub>

This pin is the collector of switch 1. This pin is connected to the V<sub>CC</sub> in the High-Side switch configuration, and is connected to the load in the Low-Side configuration.

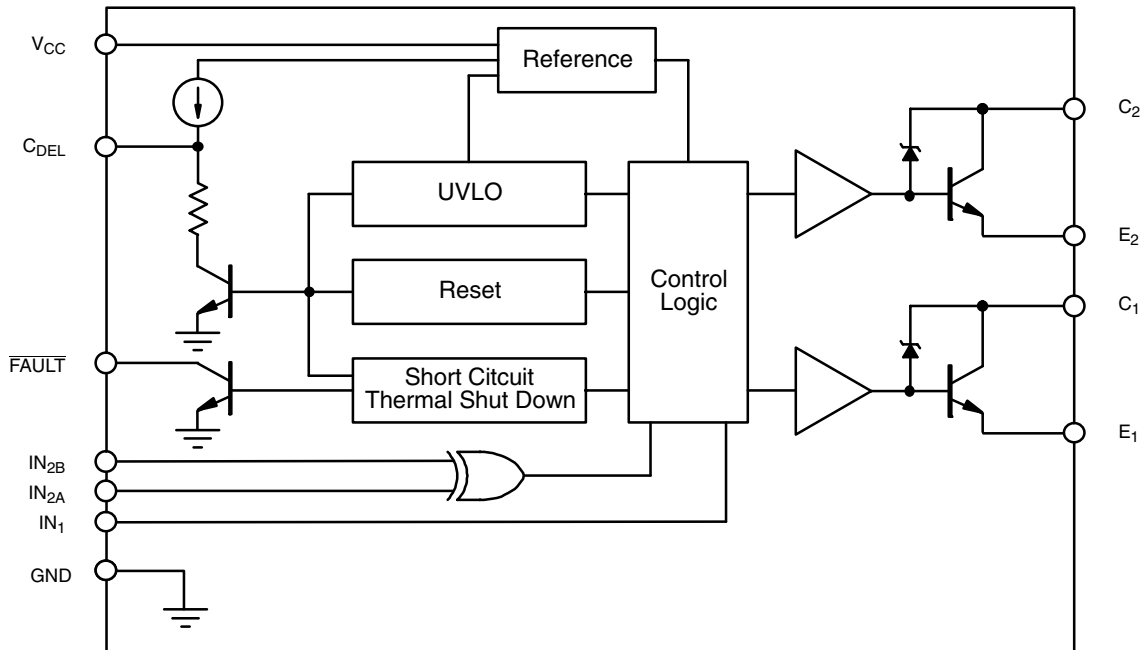

### C<sub>2</sub>

This pin is the collector of switch 2. This pin is connected to the V<sub>CC</sub> in the High-Side switch configuration, and is connected to the load in the Low-Side configuration.

### FAULT

This pin is an open collector output that is pulled to Ground in the event of a short circuit, an overcurrent, or a thermal shut down

**FUNCTIONAL BLOCK DIAGRAM**

**DETAILED OPERATION**

**Turn On Delay**

The turn on delay prohibits the output switches from being turned on for a period of time after  $V_{CC}$  has passed through 8 V and the undervoltage condition no longer exists. The UVLO function keeps the external  $C_{DEL}$  capacitor discharged until  $V_{CC}$  is greater than 8 V. Subsequently, an internal 2.5- $\mu$ A current source charges the capacitor from GND to 4.7 V. A comparator detects when the voltage on  $C_{DEL}$  passes through 4 V and enables the output switches. The delay time is a function of the capacitor value and is defined as 1.6 ms/nF.

An external switch can be connected across the capacitor to disable the output switches and reset the time delay.

**Short Circuit and Overcurrent indication**

When an overcurrent or short circuit condition occurs on either switch, the SiP43101 enters a hiccup current limiting mode. In this mode, the capacitor on  $C_{DEL}$  is discharged down to 3 V, thus turning off the output switches, and then is charged up to 4 V by a 2.5- $\mu$ A internal current source, thus turning the switches on again. If the overcurrent or short circuit condition remains this cycle will continue. The switches are enabled at a very low duty cycle, minimizing the power dissipation and protecting the switches from damage.

The FAULT output will switch to GND, indicating that an overload condition or short circuit condition exists.

*Vishay Siliconix maintains worldwide manufacturing capability. Products may be manufactured at one of several qualified locations. Reliability data for Silicon Technology and Package Reliability represent a composite of all qualified locations. Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
