

General Description

The XR81101-AA02 is a clock synthesizer operating at a 3.3V/2.5V supply with Integer divider, using a 25MHz parallel resonant crystal reference input provides a 125MHz LVCMOS output. The device is optimized for use with a 25MHz crystal (or system clock) and generates a 125MHz output clock for GE applications. The LVCMOS output has very low phase noise jitter of sub 150fs, while consuming extremely low power.

The application diagram below shows a typical synthesizer configuration with any standard crystal oscillating in fundamental mode. Internal load capacitors are optionally available to minimize/eliminate external crystal loads. A system clock can also be used to overdrive the oscillator for a synchronous timing system.

The typical phase noise plot below shows the jitter integrated over the 1.875MHz to 20MHz range that is widely used in WAN systems. These clock devices show a very good high frequency noise floor below -150dB.

The XR81101 is a family of Universal Clock synthesizer devices in TSSOP-8 packages. The devices generate ANY frequency in the range of 10MHz to 200MHz by utilizing a highly flexible delta sigma modulator and a wide ranging VCO. These devices can be used with standard crystals or external system clock to support a wide variety of applications. This family of products has an extremely low power PLL block with core power consumption 40% less than the equivalent devices from competition. By second sourcing several of the existing sockets, these devices provides a very compelling power efficiency value benefit across all market segments.

Other clock multiplier and/or driver configurations are possible in this clock family and can be requested from the factory

FEATURES

- XR81101-AA02: Factory configured
- One LVCMOS output
- Crystal oscillator interface which can also be overdriven using a single-ended reference clock
- Output frequency: 125MHz
- Crystal/input frequency: 25MHz, parallel resonant crystal
- RMS phase jitter @ 125MHz, 1.875MHz - 20MHz: < 150fs
- Full 3.3V or 2.5V operating supply
- -40°C to 85°C ambient operating temperature
- Lead-free (RoHS 6) package

APPLICATIONS

- Gigabit Ethernet
- Low-jitter Clock Generation
- Synchronized clock systems

Ordering Information – page 8

Typical Application

Absolute Maximum Ratings

Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Maximum Rating condition for extended periods may affect device reliability and lifetime.

| | |
|---|---------------------|
| Supply Voltage..... | +4.2V |
| Input Voltage..... | -0.5V to VCC + 0.5V |
| Output Voltage..... | -0.5V to VCC + 0.5V |
| Reference Frequency/Input Crystal..... | 10MHz to 60MHz |
| Storage Temperature..... | -55°C to +125°C |
| Lead Temperature (Soldering, 10 sec)..... | 300°C |
| ESD Rating (HBM - Human Body Model)..... | 2kV |

Operating Conditions

* Limits applying over the full operating temperature range are denoted by a "•".

Pin Configuration

Pin Assignments

| Pin No. | Pin Name | Type | Description |
|---------|-----------------|----------------------------------|---|
| 1 | V _{CC} | Supply | Power supply pin. |
| 2 | OE | Input (900K Ω pull-up) | Output enable pin - LVCMOS/LVTTL active high input. Outputs are enabled when OE = high. Outputs are disabled when OE = low. |
| 3 | XTAL_OUT | Output | Crystal oscillator output. |
| 4 | XTAL_IN | Input | Crystal oscillator input. |
| 5 | nc | No Connect | Unused, do not connect. |
| 6 | V _{EE} | Supply | Negative supply pin. |
| 7 | Q | Output | LVCMOS output. |
| 8 | V _{CC} | Supply | Power supply pin. |

Functional Block Diagram

Typical Performance Characteristics

Figure 1 shows a typical phase noise performance plots for a 125MHz clock output. The data was taken using the industry standard Agilent E5052B phase noise instrument. The integration range is 1.875MHz to 20MHz.

Figure 1: 125MHz Operation, Typical Phase Noise at 3.3V

Application Information

Termination for LVCMOS Outputs

The termination schemes shown in Figure 2 and Figure 3 are typical for LVCMOS outputs. A split supply approach can be used utilizing the scope's internal 50Ω impedance, as shown in Figure 4.

Figure 2: XR81101 3.3V LVCMOS Output Termination

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
