
3-wire Serial EEPROM
1K (128 x 8 or 64 x 16)

DATASHEET

Features

- Low-voltage Operation
 - $V_{CC} = 1.8V$ to $5.5V$
- User-selectable Internal Organization
 - 1K: 128 x 8 or 64 x 16
- 3-wire Serial Interface
- 2MHz Clock Rate (5V)
- Self-timed Write Cycle (5ms Max)
- High Reliability
 - Endurance: 1,000,000 Write Cycles
 - Data Retention: 100 Years
- 8-lead JEDEC SOIC, 8-lead TSSOP, 8-pad UDFN, 8-lead PDIP, and 8-ball VFBGA Packages

Description

The Atmel® AT93C46D provides 1,024 bits of Serial Electrically Erasable Programmable Read-Only Memory (EEPROM) organized as 64 words of 16 bits each (when the ORG pin is connected to V_{CC}) and 128 words of 8 bits each (when the ORG pin is tied to ground). The device is optimized for use in many industrial and commercial applications where low-power and low-voltage operations are essential. The AT93C46D is available in space-saving 8-lead JEDEC SOIC, 8-lead TSSOP, 8-pad UDFN, 8-lead PDIP, and 8-ball VFBGA packages.

The AT93C46D is enabled through the Chip Select pin (CS) and accessed via a 3-wire serial interface consisting of Data Input (DI), Data Output (DO), and Shift Clock (SK). Upon receiving a Read instruction at DI, the address is decoded, and the data is clocked out serially on the DO pin. The write cycle is completely self-timed, and no separate erase cycle is required before Write. The write cycle is only enabled when the part is in the Erase/Write Enable state. When CS is brought high following the initiation of a write cycle, the DO pin outputs the Ready/Busy status of the part.

The AT93C46D operates from 1.8V to 5.5V.

Pin Name	Function
CS	Chip Select
SK	Serial Data Clock
DI	Serial Data Input
DO	Serial Data Output
GND	Ground
V _{CC}	Power Supply
ORG	Internal Organization
NC	No Connect

2. Absolute Maximum Ratings*

Operating Temperature -55°C to +125°C
Storage Temperature -65°C to +150°C
Voltage on any pin
with respect to ground -1.0V to +7.0V
Maximum Operating Voltage 6.25V
DC Output Current 5.0mA

*Notice: Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

3. Block Diagram

Figure 3-1. Block Diagram

- Notes:
1. When the ORG pin is connected to V_{CC} , the x16 organization is selected. When it is connected to ground, the x8 organization is selected. If the ORG pin is left unconnected and the application does not load the input beyond the capability of the internal $1M\Omega$ pull-up resistor, then the x16 organization is selected.
 2. If the x16 organization is the mode of choice and pin 6 (ORG) is left unconnected, Atmel recommends using AT93C46E device. For more details, see the AT93C46E datasheet.

5. Functional Description

The AT93C46D is accessed via a simple and versatile 3-wire serial communication interface. Device operation is controlled by seven instructions issued by the Host processor. A valid instruction starts with a rising edge of CS and consists of a Start bit (Logic 1), followed by the appropriate opcode, and the desired memory address location.

Table 5-1. AT93C46D Instruction Set

Instruction	SB	Opcode	Address		Data		Comments
			x8 ⁽¹⁾	x16 ⁽¹⁾	x8	x16	
READ	1	10	A ₆ – A ₀	A ₅ – A ₀			Reads data stored in memory at specified address.
EWEN	1	00	11XXXXXXX	11XXXXXX			Write Enable must precede all programming modes.
ERASE	1	11	A ₆ – A ₀	A ₅ – A ₀			Erases memory location A _N – A ₀ .
WRITE	1	01	A ₆ – A ₀	A ₅ – A ₀	D ₇ – D ₀	D ₁₅ – D ₀	Writes memory location A _N – A ₀ .
ERAL	1	00	10XXXXXXX	10XXXXXX			Erases all memory locations. Valid only at V _{CC3} (Section 4.2, “DC Characteristics” on page 4).
WRAL	1	00	01XXXXXXX	01XXXXXX	D ₇ – D ₀	D ₁₅ – D ₀	Writes all memory locations. Valid only at V _{CC3} (Section 4.2).
EWDS	1	00	00XXXXXXX	00XXXXXX			Disables all programming instructions.

Note: 1. The ‘X’ in the address field represent don’t care values, and must be clocked.

READ: The READ instruction contains the address code for the memory location to be read. After the instruction and address are decoded, data from the selected memory location is available at the Serial Output pin, DO. Output data changes are synchronized with the rising edges of the Serial Clock pin, SK. It should be noted that a dummy bit (Logic 0) precedes the 8-bit or 16-bit data output string.

Erase/Write Enable (EWEN): To ensure data integrity, the part automatically goes into the Erase/Write Disable (EWDS) state when power is first applied. An Erase/Write Enable (EWEN) instruction must be executed first before any programming instructions can be carried out.

Note: Once in the EWEN state, programming remains enabled until an EWDS instruction is executed, or V_{CC} power is removed from the part.

ERASE: The ERASE instruction programs all bits in the specified memory location to the Logic 1 state. The self-timed erase cycle starts once the ERASE instruction and address are decoded. The DO pin outputs the Ready/Busy status of the part if CS is brought high after being kept low for a minimum of t_{CS}. A Logic 1 at the DO pin indicates that the selected memory location has been erased, and the part is ready for another instruction.

WRITE: The WRITE instruction contains the 8-bits or 16-bits of data to be written into the specified memory location. The self-timed programming cycle, t_{WP} , starts after the last bit of data is received at Serial Data Input pin DI. The DO pin outputs the Ready/Busy status of the part if CS is brought high after being kept low for a minimum of t_{CS} . A Logic 0 at DO indicates that programming is still in progress. A Logic 1 indicates that the memory location at the specified address has been written with the data pattern contained in the instruction, and the part is ready for further instructions. A Ready/Busy status cannot be obtained if CS is brought high after the end of the self-timed programming cycle, t_{WP} .

Erase All (ERAL): The Erase All (ERAL) instruction programs every bit in the Memory Array to the Logic 1 state and is primarily used for testing purposes. The DO pin outputs the Ready/Busy status of the part if CS is brought high after being kept low for a minimum of t_{CS} . The ERAL instruction is valid only at $V_{CC} = 5.0V \pm 10\%$ ([Section 4.2](#), “DC Characteristics” on page 4).

Write All (WRAL): The Write All (WRAL) instruction programs all memory locations with the data patterns specified in the instruction. The DO pin outputs the Ready/Busy status of the part if CS is brought high after being kept low for a minimum of t_{CS} . The WRAL instruction is valid only at $V_{CC} = 5.0V \pm 10\%$ ([Section 4.2](#)).

Erase/Write Disable (EWDS): To protect against accidental data disturbance, the Erase/Write Disable (EWDS) instruction disables all programming modes and should be executed after all programming operations. The operation of the Read instruction is independent of both the EWEN and EWDS instructions and can be executed at any time.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
