

# 4 OUTPUT PCIE GEN1/2 SYNTHESIZER

IDT5V41186

## Recommended Applications

4 Output synthesizer for PCIe Gen1/2

## General Description

The IDT5V41186 is a PCIe Gen2 compliant spread-spectrum-capable clock generator. The device has 4 differential HCSL outputs and can be used in communication or embedded systems to substantially reduce electro-magnetic interference (EMI). The spread amount and output frequency are selectable via select pins.

## Output Features

- 4 - 0.7V current mode differential HCSL output pairs

## Features/Benefits

- 20-pin TSSOP package; small board footprint
- Spread-spectrum capable; reduces EMI
- Outputs can be terminated to LVDS; can drive a wider variety of devices
- Power down pin; greater system power management
- OE control pin; greater system power management
- Spread% and frequency pin selection; no software required to configure device
- Industrial temperature range available; supports demanding embedded applications
- **For PCIe Gen3 applications, see the 5V41236**

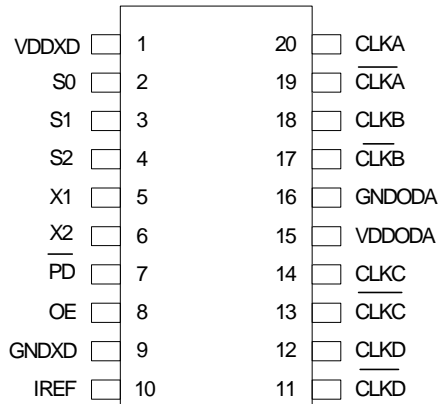

## Key Specifications

- Cycle-to-cycle jitter < 100 ps
- Output-to-output skew < 50 ps
- PCIe Gen2 phase jitter < 3.0ps RMS

## Block Diagram

## Pin Assignment

20-pin (173 mil) TSSOP

## Spread Spectrum Selection Table

| S2 | S1 | S0 | Spread%   | Spread Type    | Output Frequency |
|----|----|----|-----------|----------------|------------------|
| 0  | 0  | 0  | -0.5      | Down           | 100              |
| 0  | 0  | 1  | -1.0      | Down           | 100              |
| 0  | 1  | 0  | -1.5      | Down           | 100              |
| 0  | 1  | 1  | No Spread | Not Applicable | 100              |
| 1  | 0  | 0  | -0.5      | Down           | 200              |
| 1  | 0  | 1  | -1.0      | Down           | 200              |
| 1  | 1  | 0  | -1.5      | Down           | 200              |
| 1  | 1  | 1  | No Spread | Not Applicable | 200              |

## Pin Descriptions

| Pin | Pin Name | Pin Type | Pin Description  |
|-----|----------|----------|--|
| 1   | VDDXD    | Power    | Connect to +3.3 V digital supply.  |
| 2   | S0       | Input    | Spread spectrum select pin #0. See table above. Internal pull-up resistor.                                       |
| 3   | S1       | Input    | Spread spectrum select pin #1. See table above. Internal pull-up resistor.                                       |
| 4   | S2       | Input    | Spread spectrum select pin #2. See table above. Internal pull-up resistor.                                       |
| 5   | X1       | Input    | Crystal connection. Connect to a fundamental mode crystal or clock input.  |
| 6   | X2       | Output   | Crystal connection. Connect to a fundamental mode crystal or leave open.   |
| 7   | PD       | Input    | Powers down all PLL's and tri-states outputs when low. Internal pull-up resistor.                                |
| 8   | OE       | Input    | Provides output on, tri-states output (High = enable outputs; Low = disable outputs). Internal pull-up resistor. |
| 9   | GND      | Power    | Connect to digital ground.   |
| 10  | IREF     | Output   | Precision resistor attached to this pin is connected to the internal current reference.                          |
| 11  | CLKD     | Output   | Selectable 100/200 MHz spread spectrum differential Complement output clock D.                                   |
| 12  | CLKD     | Output   | Selectable 100/200 MHz spread spectrum differential True output clock D.   |
| 13  | CLKC     | Output   | Selectable 100/200 MHz spread spectrum differential Complement output clock C.                                   |
| 14  | CLKC     | Output   | Selectable 100/200 MHz spread spectrum differential True output clock C.   |
| 15  | VDDODA   | Power    | Connect to +3.3 V analog supply.   |
| 16  | GND      | Power    | Connect to analog ground.  |
| 17  | CLKB     | Output   | Selectable 100/200 MHz spread spectrum differential Complement output clock B.                                   |
| 18  | CLKB     | Output   | Selectable 100/200 MHz spread spectrum differential True output clock B.   |
| 19  | CLKA     | Output   | Selectable 100/200 MHz spread spectrum differential Complement output clock A.                                   |
| 20  | CLKA     | Output   | Selectable 100/200 MHz spread spectrum differential True output clock A.   |

## Application Information

### Decoupling Capacitors

As with any high-performance mixed-signal IC, the IDT5V41186 must be isolated from system power supply noise to perform optimally.

Decoupling capacitors of 0.01 $\mu$ F must be connected between each VDD and the PCB ground plane.

### PCB Layout Recommendations

For optimum device performance and lowest output phase noise, the following guidelines should be observed.

Each 0.01 $\mu$ F decoupling capacitor should be mounted on the component side of the board as close to the VDD pin as possible. No vias should be used between decoupling capacitor and VDD pin. The PCB trace to VDD pin should be kept as short as possible, as should the PCB trace to the ground via. Distance of the ferrite bead and bulk decoupling from the device is less critical.

2) An optimum layout is one with all components on the same side of the board, minimizing vias through other signal layers (the ferrite bead and bulk decoupling capacitor can be mounted on the back). Other signal traces should be routed away from the IDT5V41186.

This includes signal traces just underneath the device, or on layers adjacent to the ground plane layer used by the device.

### External Components

A minimum number of external components are required for proper operation. Decoupling capacitors of 0.01  $\mu$ F should be connected between VDD and GND pairs (1,9 and 15,16) as close to the device as possible.

**On chip capacitors-** Crystal capacitors should be connected from pins X1 to ground and X2 to ground to optimize the initial accuracy. The value (in pf) of these crystal caps equal  $(C_L - 12) * 2$  in this equation,  $C_L$  = crystal load capacitance in pf. For example, for a crystal with a 16 pF load cap, each external crystal cap would be 8 pF.  
 $[(16 - 12) * 2] = 8$ .

### Current Reference Source $R_r$ ( $I_{ref}$ )

If board target trace impedance (Z) is 50 $\Omega$ , then  $R_r = 475\Omega$  (1%), providing IREF of 2.32 mA, output current ( $I_{OH}$ ) is equal to 6\*IREF.

### Load Resistors $R_L$

Since the clock outputs are open source outputs, 50 ohm external resistors to ground are to be connected at each clock output.

### Output Termination

The PCI-Express differential clock outputs of the IDT5V41186 are open source drivers and require an external series resistor and a resistor to ground. These resistor values and their allowable locations are shown in detail in the **PCI-Express Layout Guidelines** section.

The IDT5V41186 can also be configured for LVDS compatible voltage levels. See the **LVDS Compatible Layout Guidelines** section.

## Output Structures

### General PCB Layout Recommendations

For optimum device performance and lowest output phase noise, the following guidelines should be observed.

1. Each  $0.01 \mu\text{F}$  decoupling capacitor should be mounted on the component side of the board as close to the VDD pin as possible.
2. No vias should be used between decoupling capacitor and VDD pin.
3. The PCB trace to VDD pin should be kept as short as possible, as should the PCB trace to the ground via. Distance of the ferrite bead and bulk decoupling from the device is less critical.
4. An optimum layout is one with all components on the same side of the board, minimizing vias through other signal layers (any ferrite beads and bulk decoupling capacitors can be mounted on the back). Other signal traces should be routed away from the IDT5V41186. This includes signal traces just underneath the device, or on layers adjacent to the ground plane layer used by the device.

## Layout Guidelines

| SRC Reference Clock                             |                    |      |        |

## Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the IDT5V41186. These ratings are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

| Item                                       | Rating              |
|--|---------------------|
| Supply Voltage, VDD, VDDA                  | 5.5 V               |
| All Inputs and Outputs                     | -0.5 V to VDD+0.5 V |
| Ambient Operating Temperature (commercial) | 0 to +70°C          |
| Ambient Operating Temperature (industrial) | -40 to +85°C        |
| Storage Temperature                        | -65 to +150°C       |
| Junction Temperature                       | 125°C               |
| Soldering Temperature                      | 260°C               |
| ESD Protection (Input)                     | 2000 V min. (HBM)   |

## DC Electrical Characteristics

Unless stated otherwise, VDD = 3.3 V  $\pm$ 5%, Ambient Temperature -40 to +85°C

| Parameter                          | Symbol            | Conditions   | Min.    | Typ. | Max.     | Units      |
|------------------------------------|-------------------|--|---------|------|----------|------------|
| Supply Voltage                     | V                 |  | 3.135   | 3.3  | 3.465    |            |
| Input High Voltage <sup>1</sup>    | V <sub>IH</sub>   |  | 2.2     |      | VDD +0.3 | V          |

| Frequency Synthesis Error               |              | All outputs                                      |      | 0    |      | ppm   |
| Modulation Frequency                    |              | Spread spectrum                                  | 30   | 32.9 | 33   | kHz   |
| Rise Time <sup>1,2</sup>                | $t_{OR}$     | From 0.175 V to 0.525 V                          | 175  |      | 700  | ps    |
| Fall Time <sup>1,2</sup>                | $t_{OF}$     | From 0.525 V to 0.175 V                          | 175  |      | 700  | ps    |
| Rise/Fall Time Variation <sup>1,2</sup> |              |  |      |      | 125  | ps    |
| Output to Output Skew                   |              |  |      |      | 50   | ps    |
| Duty Cycle <sup>1,3</sup>               |              |  | 45   |      | 55   | %     |
| Output Enable Time <sup>5</sup>         |              | All outputs                                      |      | 50   | 100  | ns    |
| Output Disable Time <sup>5</sup>        |              | All outputs                                      |      | 50   | 100  | ns    |
| Stabilization Time                      | $t_{STABLE}$ | From power-up $V_{DD}=3.3\text{ V}$              |      |      | 1.8  | ms    |
| Spread Spectrum Transition Time         | $t_{SPREAD}$ | Stabilization time after spread spectrum changes | 7    |      | 30   | ms    |

<sup>1</sup> Test setup is  $R_S=33\Omega$ ,  $R_P=50\Omega$  with  $C_L=2\text{ pF}$ ,  $R_r = 475\Omega$  (1%).

<sup>2</sup> Measurement taken from a single-ended waveform.

<sup>3</sup> Measurement taken from a differential waveform.

<sup>4</sup> Measured at the crossing point where instantaneous voltages of both CLKOUT and  $\overline{\text{CLKOUT}}$  are equal.

<sup>5</sup> CLKOUT pins are tri-stated when OE is asserted low. CLKOUT is driven differential when OE is high unless its  $\overline{\text{PD}}$  is low.

## Electrical Characteristics - Differential Phase Jitter

| Parameter     | Symbol                  | Conditions                                | Min | Typ  | Max | Units    | Notes |
|---------------|-------------------------|---|-----|------|-----|----------|-------|
| Jitter, Phase | $t_{j\text{phasePLL}}$  | PCIe Gen1                                 |     | 30   | 86  | ps (p-p) | 1,2,3 |
|               | $t_{j\text{phaseLO}}$   | PCIe Gen2, 10 kHz < f < 1.5 MHz           |     | 0.76 | 3   | ps (RMS) | 1,2,3 |
|               | $t_{j\text{phaseHIGH}}$ | PCIe Gen2, 1.5 MHz < f < Nyquist (50 MHz) |     | 2.0  | 3.1 | ps (RMS) | 1,2,3 |

Note 1. Guaranteed by design and characterization, not 100% tested in production.

Note 2. See <http://www.pcisig.com> for complete specs.

Note 3. Applies to 100MHz, spread off and 0.5% down spread only.

## Thermal Characteristics

| Parameter                              | Symbol        | Conditions     | Min. | Typ. | Max. | Units |
|--|---------------|----------------|------|------|------|-------|

|  | $\theta_{JA}$ | 1 m/s air flow |      | 78   |      | °C/W  |
|  | $\theta_{JA}$ | 3 m/s air flow |      | 65   |      | °C/W  |
| Thermal Resistance Junction to Case    | $\theta_{JC}$ |                |      | 20   |      | °C/W  |

### Marking Diagram (5V41186PGG)

### Marking Diagram (5V41186PGGI)

#### Notes:

- Line 1 and 2: IDT part number.
- Line 3: # – Die revision; YYWW – Date code; \$ – Assembly location.
- “G” after the two-letter package code designates RoHS compliant package.
- “I” at the end of part number indicates industrial temperature range.
- Bottom marking: country of origin if not USA.

### Package Outline and Package Dimensions (20-pin TSSOP, 173 mil Body)

Package dimensions are kept current with JEDEC Publication No. 95, MO-153

| Symbol | Millimeters |      | Inches*      |       |
|--------|-------------|------|--------------|-------|
|        | Min         | Max  | Min          | Max   |
| A      |             | 1.20 |              | 0.047 |
| A1     | 0.05        | 0.15 | 0.002        | 0.006 |
| A2     | 0.80        | 1.05 | 0.032        | 0.041 |
| b      | 0.19        | 0.30 | 0.007        | 0.012 |
| c      | 0.09        | 0.20 | 0.0035       | 0.008 |
| D      | 6.40        | 6.60 | 0.252        | 0.260 |
| E      | 6.40 BASIC  |      | 0.252 BASIC  |       |
| E1     | 4.30        | 4.50 | 0.169        | 0.177 |
| e      | 0.65 Basic  |      | 0.0256 Basic |       |
| L      | 0.45        | 0.75 | 0.018        | 0.030 |
| a      | 0°          | 8°   | 0°           | 8°    |
| aaa    | --          | 0.10 | --           | 0.004 |

### Ordering Information

| Part / Order Number | Marking     | Shipping Packaging | Package      | Temperature  |
|---------------------|-------------|--------------------|--------------|--------------|
| 5V41186PGG          | see page 10 | Tubes              | 20-pin TSSOP | 0 to +70°C   |
| 5V41186PGG8         |             | Tape and Reel      | 20-pin TSSOP | 0 to +70°C   |
| 5V41186PGGI         |             | Tubes              | 20-pin TSSOP | -40 to +85°C |
| 5V41186PGGI8        |             | Tape and Reel      | 20-pin TSSOP | -40 to +85°C |

“G” after the two-letter package code are the Pb-Free configuration and are RoHS compliant.

While the information presented herein has been checked for both accuracy and reliability, Integrated Device Technology (IDT) assumes no responsibility for either its use or for the infringement of any patents or other rights of third parties, which would result from its use. No other circuits, patents, or licenses are implied. This product is intended for use in normal commercial applications. Any other applications such as those requiring extended temperature range, high reliability, or other extraordinary environmental requirements are not recommended without additional processing by IDT. IDT reserves the right to change any circuitry or specifications without notice. IDT does not authorize or warrant any IDT product for use in life support devices or critical medical instruments.

## Revision History

| Rev. | Originator | Date     | Description of Change  |
|------|------------|----------|--|
| A    | D.C.       | 12/20/10 | New datasheet; Preliminary initial release.  |
| B    | RDW        | 11/22/11 | 1. Changed title to "4 Output PCIe GEN1/2 Synthesizer"<br>2. Added note to Features section: "For PCIe Gen3 applications, see 5V41236" |
| C    | AT         | 01/05/12 | Added note 3 to Differential Phase Jitter table.   |
| D    | R. Willner | 04/02/12 | Released to Final.   |
| E    | J. Chen    | 01/09/15 | Updated R2&3 values within the "Alternative Termination for LVDS and other Common Differential Signals" table                          |

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
