This specification sheet, when used with RW-2500, defines the product characteristics and performance of TE Connectivity TMS Cable Marker.

The printing system developed for this marker sleeve is now obsolete. TE can only guarantee the physio-chemical nature of the product, and not any marking applied using non-recommended printing systems. Where non-standard systems are used, customers are required to carry out their own validation testing.

3. REQUIREMENTS

3.1. Material

The markers shall be fabricated from irradiated, thermally-stabilized, modified polyolefin compound. The material shall be homogeneous and essentially free from flaws, defects, bubbles, cracks, or inclusions

3.2. Color

The sleeves shall be supplied in white, unless otherwise specified.

3.3. Properties

The sleeves shall meet the requirements of Table 2.

3.4. Form

The markers shall be supplied as a continuous length of carrier strip which has been specifically punched to size, in accordance with Table 1.

4. QUALITY ASSURANCE

4.1. Qualification Tests

Qualification tests are those performed on markers and marker material submitted for qualification as a satisfactory product and shall consist of all tests listed in this specification.

4.2. Acceptance Tests

Acceptance tests are those performed on markers submitted for acceptance under contract. Acceptance tests shall consist of the following: dimensions, heat shock (RW-2500).

4.3. Test Specimens

Test specimens shall be individual TMS-CM, detached from the carrier strip. Where RW-2500 is referenced as a test method, the term "marker" or "specimen" shall be understood to mean "TMS-CM".
