## Automotive R<sup>2</sup>Coupler™ Wide Operating Temperature 20kBd Digital Optocoupler Configurable as Low Power, Low Leakage Phototransistor

### Data Sheet

Lead (Pb) Free  
RoHS 6 fully compliant

RoHS 6 fully compliant options available;  
-xxxE denotes a lead-free product

### Description

The ACFL-5212T is an automotive grade dual channel, bi-directional, high CMR, 20kBd digital optocoupler, configurable as a low power, low leakage phototransistor, specifically for use in automotive applications. The stretched SO-12 package outline is designed to be compatible with standard surface mount processes and occupies the same land area as the single channel equivalent, ACPL-K49T, in stretched SO8 package.

This digital optocoupler uses an insulating layer between the light emitting diode and an integrated photo detector to provide electrical insulation between input and output. Separate connections for the photodiode bias and output transistor collector increase the speed up to a hundred times over that of a conventional photo-transistor coupler by reducing the base-collector capacitance.

Each channel is also galvanically isolated from each other with no cross-talk.

Avago R2Coupler provides reinforced insulation and reliability that delivers safe signal isolation critical in automotive and high temperature industrial applications.

### Features

- Qualified to AEC Q100 Grade 1 Guidelines
- Wide Temperature Range: -40°C to +125°C
- Low LED Drive Current: 4mA (typ)
- Low Power, Low Leakage Phototransistor in a “4-pin Configuration” ( $I_{(CEO)} < 5\mu A$ )
- 30 kV/ $\mu s$  High Common-Mode Rejection at  $V_{CM} = 1500$  V (typ)
- Low Propagation Delay: 20 $\mu s$  (max)
- Compact, Auto-Insertable Stretched SO12 Packages
- Worldwide Safety Approval:
  - UL 1577 recognized, 5kV<sub>RMS</sub>/1 min.
  - CSA Component Acceptance Notice#5A
  - IEC/EN/DIN EN 60747-5-5

### Applications

- Automotive Low Speed Digital Signal Isolation Interface
- Inverter Fault Feedback Signal Isolation
- Switching Power Supplies Feedback Circuit

### Functional Diagram

Note: The connection of a 1  $\mu F$  bypass capacitor between pins 1 and 3 and pins 8 and 10 is recommended.

Note: Pins 1 and 2 and pins 9 and 10 are externally shorted for 4-pin configuration. Do not connect bypass capacitors in this configuration.

\* The Input-Output Momentary Withstand Voltage is a dielectric voltage rating that should not be interpreted as an input-output continuous voltage rating.

Notes:

- Current Transfer Ratio in percent is defined as the ratio of output collector current,  $I_O$ , to the forward LED input current,  $I_F$ , times 100.
- Use of  $1\mu\text{F}$  bypass capacitors connected between pins 1 and 3 and pins 8 and 10 for 5-pin configuration.
- Common transient immunity in a Logic High level is the maximum tolerable (positive)  $dV_{CM}/dt$  on the rising edge of the common mode pulse,  $V_{CM}$ , to assure that the output will remain in a Logic High state (i.e.,  $V_O > 2.0\text{V}$ ). Common mode transient immunity in a Logic Low level is the maximum tolerable (negative)  $dV_{CM}/dt$  on the falling edge of the common mode pulse signal,  $V_{CM}$  to assure that the output will remain in a Logic Low state (i.e.,  $V_O < 0.8\text{V}$ ).
- Device considered a two terminal device: pins 1 to 6 shorted together, and pins 7 to 12 shorted together.
- In accordance with UL 1577, each optocoupler is proof tested by applying an insulation test voltage  $> 6000V_{RMS}$  for 1 second.

## Thermal Resistance Measurement

The diagram of ACFL-5212T for measurement is shown in Figure 13. This is a multi-chip package with four heat sources, the effect of heating of one die due to the adjacent dice are considered by applying the theory of linear superposition. Here, one die is heated first and the temperatures of all the dice are recorded after thermal equilibrium is reached. Then, the 2nd die is heated and all the dice temperatures are recorded and so on until the 4th die is heated. With the known ambient temperature, the die junction temperature and power dissipation, the thermal resistance can be calculated. The thermal resistance calculation can be cast in matrix form. This yields a 4 by 4 matrix for our case of two heat sources.

$$\begin{vmatrix} R_{11} & R_{12} & R_{13} & R_{14} \\ R_{21} & R_{22} & R_{23} & R_{24} \\ R_{31} & R_{32} & R_{33} & R_{34} \\ R_{41} & R_{42} & R_{43} & R_{44} \end{vmatrix} \cdot \begin{vmatrix} P_1 \\ P_2 \\ P_3 \\ P_4 \end{vmatrix} = \begin{vmatrix} \Delta T_1 \\ \Delta T_2 \\ \Delta T_3 \\ \Delta T_4 \end{vmatrix}$$

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
