

MAXIM

Precision, CMOS Analog Switches

General Description

The MAX317/MAX318/MAX319 are precision, CMOS, monolithic analog switches. The single-pole single-throw (SPST) MAX317 is normally closed (NC), the SPST MAX318 is normally open (NO), and the single-pole double-throw (SPDT) MAX319 has one normally open and one normally closed switch. All three parts offer low on resistance (less than 35Ω), guaranteed to match within 2Ω between channels and to remain flat over the analog signal range ($\Delta 3\Omega$ max). They also offer low leakage (less than 250pA at $+25^\circ\text{C}$ and less than 6nA at $+85^\circ\text{C}$) and fast switching (turn-on time less than 175ns and turn-off time less than 145ns).

The MAX317/MAX318/MAX319 are fabricated with Maxim's new improved silicon-gate process. Design improvements guarantee extremely low charge injection (10pC), low power consumption ($35\mu\text{W}$), and electrostatic discharge (ESD) greater than $\pm 2000\text{V}$. The 44V maximum breakdown voltage allows rail-to-rail analog signal handling capability.

Applications

Sample-and-Hold Circuits
Guidance and Control Systems
Heads-Up Displays
Test Equipment
Military Radios
Communications Systems
Battery-Powered Systems
PBX, PABX

Features

- ♦ Low On Resistance $< 20\Omega$ Typical (35Ω Max)
- ♦ Guaranteed Matched On Resistance Between Channels $< 2\Omega$
- ♦ Guaranteed Flat On Resistance over Analog Signal Range $\Delta 3\Omega$ Max
- ♦ Guaranteed Charge Injection $< 10\text{pC}$
- ♦ Guaranteed Off-Channel Leakage $< 6\text{nA}$ at $+85^\circ\text{C}$
- ♦ ESD Guaranteed $> 2000\text{V}$ per Method 3015.7
- ♦ Single-Supply Operation ($+10\text{V}$ to $+30\text{V}$)
Bipolar-Supply Operation ($\pm 4.5\text{V}$ to $\pm 20\text{V}$)
- ♦ TTL-/CMOS-Logic Compatible
- ♦ Rail-to-Rail Analog Signal Handling Capability

ABSOLUTE MAXIMUM RATINGS

Voltage Referenced to V-

V+	+44V
GND	+25V
V _L	(GND - 0.3V) to (V+ + 0.3V)
IN, COM, NC, NO	(V- - 2V) to (V+ + 2V) or 30mA, whichever occurs first
Continuous Current (any terminal)	30mA
Peak Current, NC, NO, COM (pulsed at 1ms, 10% duty cycle max)	100mA
ESD	±2000V

Continuous Power Dissipation (T_A = +70°C) (Note 1)

Plastic DIP (derate 9.09mW/°C above +70°C)	727mW
SO (derate 5.88mW/°C above +70°C)	471mW
CERDIP (derate 8.00mW/°C above +70°C)	640mW

Operating Temperature Ranges:

MAX31_C_	0°C to +70°C
MAX31_E_	-40°C to +85°C
MAX31_MJA	-55°C to +125°C
Storage Temperature Range	-55°C to +150°C
Lead Temperature (soldering, 10sec)	+300°C

Note 1: All leads are soldered or welded to PC board.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS — Dual Supplies

Pin Description

PIN			NAME	FUNCTION
MAX317	MAX318	MAX319		
1	1	1	COM	Analog-switch common terminal
2	2	—	N.C.	No connect — not internally connected
—	—	8	NO	Analog-switch normally open terminal
3	3	3	GND	Logic ground
4	4	4	V+	Analog-signal positive supply input
5	5	5	VL	Logic-level positive supply input
6	6	6	IN	Logic-level input
7	7	7	V-	Analog-signal negative supply input
8	—	2	NC	Analog-switch normally closed terminal
—	8	—	NO	Analog-switch normally open terminal

Applications Information

Operation with Supply Voltages Other Than $\pm 15\text{V}$

The main limitation of supply voltages other than $\pm 15\text{V}$ is analog signal range reduction. The MAX317/MAX318/MAX319 switches operate with bipolar supplies of $\pm 5\text{V}$ to $\pm 20\text{V}$. Typical Operating Characteristics graphs show typical on resistance for $\pm 15\text{V}$, $\pm 10\text{V}$, and $\pm 5\text{V}$ supplies. Switching times increase by a factor of two or more for operation at $\pm 5\text{V}$. The MAX317/MAX318/MAX319 can operate from unipolar supplies of $+10\text{V}$ to $+30\text{V}$. Both parts can also operate from unbalanced supplies such as $+24\text{V}$ and -5V .

Connect V- to 0V when operating with a single supply. This means that VL must be connected to $+5\text{V}$ to be TTL compatible, or to V+ for CMOS logic input levels.

Overvoltage Protection

Proper power-supply sequencing is recommended for all CMOS devices. It is important not to exceed the absolute maximum ratings because stresses beyond the listed ratings may cause permanent damage to the devices. Always sequence V+ on first, followed by VL, V-, and logic inputs. If power-supply sequencing is not possible, protect the devices from overvoltage by

adding two small signal diodes in series with the supply pins (Figure 1). Adding the diodes reduces the analog signal range to 1V below V+ and 1V below V-, but low switch resistance and low leakage characteristics are unaffected. Device operation is unchanged, and the difference between V+ to V- should not exceed $+44\text{V}$.

MAXIM is a registered trademark of Maxim Integrated Products.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
