

SPSTET4-01

Power Shelf

SPSTET4-01 power-shelf solutions provide rectification, system management, and power distribution, while maintaining high reliability and offering flexibility for future expansion.

The power shelf can be configured with up to six hot-swap capable TET4000-48-069RA AC/DC-DC power supplies that convert 3-phase AC mains power into a main output of 54.5 VDC for powering IT racks, OCP racks and Data centers.

The shelf has an optional slot for Network Attached Controller for providing control functions and monitoring through a 10/100 MB base Ethernet port and can be connected directly to the data center management network.

Key Features & Benefits

- Two 3-Phase inputs, one AC inlet powers 3 power modules.
- Modules are hot-swap capable
- Modules support CAN communication interface for control, programming and monitoring with CAN communication protocol
- Modules implement the following protections: Overtemperature, output overvoltage and output overcurrent
- Overall dimensions: 436.5 x 47 x 710 mm (17.2 x 1.85 x 27.9 in)
- RoHS Compliant

Applications

- IT racks
- OCP racks
- Data centers

5. OVERVIEW

The SPSTET4-01 Power Shelf is a 10U height power shelf. It can be configured with up to six hot-swap capable TET4000-48-069RA AC/DC power supplies that convert standard AC mains power into a main output of 54.5 VDC for powering IT racks, OCP racks and Data centers.

The CAN communication is routed through the CAN BUS inside the shelf. PSU Modules support CAN communication interface for control, programming and monitoring with the CAN communication protocol.

The shelf has a slot for network attached controller (NAC) for providing control functions and monitoring through a 10/100 MB base Ethernet port and can be connected directly to the data center management network. It is hot-pluggable and supplied via the 12 V standby provided by the power supplies in the shelf. The controller can be configured through a web interface; the monitoring and control functions are accessed through SNMPv3.

7.2 LOGIC SIGNALS

PSON_SHELF_L signal is an internally pulled-up input signal (3.3 V) to enable / disable the main output V_1 of the Shelf. This active-low pin is also used to clear any latched fault condition, this is similar to the PSON_L on the PSU level. The internal INOK_L_Px signal of each individual module is fed to the backplane microcontroller for modules synchronized AC startup. This allows the shelf to start up with load > 4000 W during AC application. The microcontroller provides an INOK_L output signal. INOK_L is low when there is at least one module supplied with correct input voltage. A pull up resistor of 10k Ω to 3.3 V within the shelf provides the high-level voltage for the INOK_L signal.

7.3 CAN COMMUNICATION

The PSU Modules are individually set to six fixed different address. CAN communication for the PSU Modules are described in more detail in document BCA.00231. The CAN communication to the PSU Modules are routed through CAN BUS. The PSON function of the shelf can also be controlled by a command similar to PMBus® command sent to the backplane Controller, see document BCA.00254.0 for further information and the table below.

There is a dual port Dsub9 connector for daisy chain operations.

The current share between different shelves is achieved by daisy chain connection of the CAN connectors.

7.5 NETWORK ATTACHED CONTROLLER (optional)

The Network Attached Controller is a shelf level controller providing monitoring and control functions through a 10/100 MB base Ethernet port and can be connected directly to the data center management network. It is hot-pluggable and supplied via the 12 V redundant standby provided by the power supplies in the shelf. The controller can be configured through a web interface; the monitoring and control functions are accessed through SNMP.

7.6 CONTROL LEDs

Each PSU front-end module has 2 LEDs to indicate status condition. LED number one is green and indicates AC power is on or off, while LED number two is bi-colored: green and yellow and indicates DC power presence or fault situations.

OPERATING CONDITION	LED SIGNALING
AC LED

7.8 AUXILIARY AC OUTLET

The 3 connectors (J123, J124, and J125) are used to provide AC power to the Network Switch Devices. Each connector is connected to one of the LIVE terminals (L1, L2, and L3) and NEUTRAL from the 3-phase input (J107). These are protected by a 10 A / 500 Vac Time Lag fuse on the LIVE terminal (F123) and 15 A / 500 Vac Fast-Acting fuse on the LIVE terminal (F124 and F125). See Safety Warning when servicing the fuse.

When power shelf is operated at ambient temp of +45 °C to +55 °C, the output load current must be derated to 75%.

⁴ The order of the criteria in the table corresponds to the testing precedence in the controller. LEDs are only available if sufficient input voltage is applied for operation of the internal supply circuits.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкуренеспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
