## SERCOS Fiber Optic Transmitters and Receivers

## Data Sheet

### SERCOS

SERCOS is a Serial Realtime Communication System, a standard digital interface for communication between controls and drives for numerically controlled machines. The SERCOS interface specification was written by a joint working group of the VDW (German Machine Tool Builders Association) and ZVEI (German Electrical and Electronic Manufacturer's Association) to allow data exchange between NC controls and drives via fiber optic rings, with isolation and noise immunity. The HFBR-0600Z family of fiber optic transmitters and receivers comply to the SERCOS specifications for transmitter and receiver optical characteristics and connector style (SMA).

### Description

The HFBR-0600Z components are capable of operation at symbol rates from DC to over 2 MBd and distances from 0 to over 20 metres. The HFBR-1602Z and HFBR-1604Z transmitters contain a 655 nm AlGaAs emitter capable of efficiently launching optical power into 1000 mm plastic optical fiber. The optical output is specified at the end of 0.5 m of plastic optical fiber.

The HFBR-1604Z is a selected version of the HFBR-1602, with power specified to meet the SERCOS high attenuation specifications.

The HFBR-2602Z receiver incorporates an integrated photo IC containing a photodetector and DC amplifier driving an open-collector Schottky output transistor. The HFBR-2602Z is designed for direct interfacing to popular logic families. The absence of an internal pullup resistor allows the open-collector output to be used with logic families such as CMOS requiring voltage excursions higher than  $V_{CC}$ . The HFBR-2602Z has a dynamic range of 15 dB.

### Features

- Fully compliant to SERCOS optical specifications
- Optimized for 1 mm plastic optical fiber
- Compatible with SMA connectors
- Auto-insertable and wave solderable
- Data transmission at symbol rates from DC to over 2 MBd for distances from 0 to over 20 metres

### Applications

- Industrial control data links
- Reduction of lightning and voltage transient susceptibility
- Tempest-secure data processing equipment
- Isolation in test and measurement instruments
- Robotics communication

**CAUTION:** The small junction sizes inherent to the design of this component increase the component's susceptibility to damage from electrostatic discharge (ESD). It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

\* Pins 1, 4, 5, and 8 are isolated from the internal circuitry, but electrically connected to one another.

\*\* Transmitter Pin 7 may be left unconnected if necessary.

In the receiver, both the opencollector "Data" output Pin 6 and V<sub>CC</sub> Pin 2 are referenced to "Common" Pin 3 and 7. It is essential that a bypass capacitor (0.1 μF ceramic) be connected from Pin 2 (V<sub>CC</sub>) to Pin 3 (circuit common) of the receiver.

## HFBR-0600Z SMA Series

### Mechanical Dimensions

SMA is an industry standard fiber optic connector, available from many fiber optic connector suppliers. HFBR-4401Z is a kit consisting of 100 nuts and 100 washers for panel mounting the HFBR-0600Z components.

Notes:

- 2.0 mm from where leads enter case.
- Typical data at T<sub>A</sub> = +25° C.
- Thermal resistance is measured with the transmitter coupled to a connector assembly and fiber, and mounted on a printed circuit board.
- Pins 2, 6, and 7 are welded to the cathode header connection to minimize the thermal resistance from junction to ambient. To further reduce the thermal resistance, the cathode trace should be made as large as is consistent with good RF circuit design.
- P<sub>T</sub> is measured with a large area detector at the end of 0.5 metre of plastic optical fiber with 1 mm diameter and numerical aperture of 0.5.
- When changing μW to dBm, the optical power is referenced to 1 mW (1000 μW). Optical Power P(dBm) = 10 log [P (μW)/1000 μW].
- Measured at the end of 1 mm plastic fiber optic cable with a large area detector.
- 8 mA load (5 x 1.6 mA), R<sub>L</sub> = 560 Ω.
- Propagation delay through the system is the result of several sequentially occurring phenomena. Consequently it is a combination of data-rate-limiting effects and of transmission-time effects. Because of this, the data-rate limit of the system must be described in terms of time differentials between delays imposed on falling and rising edges. As the cable length is increased, the propagation delays increase. Data-rate, as limited by pulse width distortion, is not affected by increasing cable length if the optical power level at the receiver is maintained.
- Pulse width distortion is the difference between the delay of the rising and falling edges.
- Both HFBR-1602Z and HFBR-1604Z meet the SERCOS "low attenuation" specifications when operated at 35 mA; only HFBR-1604Z meets the SERCOS "high attenuation" limits when operated at 60 mA.

TECHNOLOGIES

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
