

### Typical Applications

This HMC-MDB169 is ideal for:

- Short Haul / High Capacity Radios
- Point-to-Multi-Point Equipment
- Military Radar, ECM & EW
- SATCOM

### Features

- Passive Double Balanced Topology
- High LO to RF Isolation: 30 dB
- Low Conversion Loss: 8 dB
- Wide IF Bandwidth: DC - 5 GHz
- Die Size: 0.9 x 1.0 x 0.1 mm

### Functional Diagram

### General Description

The HMC-MDB169 is a passive Double Balanced MMIC Mixer which utilizes GaAs Heterojunction Bipolar Transistor (HBT) Schottky diode technology and can be used as either an upconverter or a downconverter. This compact mixer features wide IF bandwidth, low conversion loss and high LO to RF and LO to IF isolation. All bond pads and the die backside are Ti/Au metallized and the Schottky devices are fully passivated for reliable operation. The HMC-MDB169 Double Balanced Mixer is compatible with conventional die attach methods, as well as thermocompression and thermosonic wire bonding, making it ideal for MCM and hybrid microcircuit applications. This compact MMIC is a much smaller and more consistent alternative to hybrid style double balanced mixer assemblies. All data shown herein is measured with the chip in a 50 Ohm environment and contacted with RF probes.

### Electrical Specifications,<sup>[1]</sup> $T_A = 25^\circ\text{C}$ , $IF = 2\text{ GHz}$ , $LO = +13\text{ dBm}$

Parameter	Min.	Typ.	Max.	Units
Frequency Range, RF & LO		54 - 64		GHz
Frequency Range, IF		DC - 5		GHz
Conversion Loss		8	11	dB
LO to RF Isolation		30		dB
LO to IF Isolation		25		dB
RF to IF Isolation		25		dB
IP3 (Input)		13		dBm
1 dB Compression (Input)		4		dBm

[1] Unless otherwise indicated, all measurements are from probed die

## GaAs MMIC FUNDAMENTAL MIXER, 54 - 64 GHz

### Upconverter Conversion Loss

Note: Measured Performance Characteristics ( $T_{OP} = 25^{\circ}C$ )

RF = 59.5 - 64 GHz  
 LO = 59 GHz  
 IF = 0.1 - 5.0 GHz  
 PLO = +13 dBm  
 PRF = -10 dBm

### Downconverter Conversion Loss

Note: Measured Performance Characteristics ( $T_{OP} = 25^{\circ}C$ )

RF = 57.5 - 64 GHz  
 LO = 55.5 - 62 GHz  
 IF = 2 GHz  
 PLO = +13 dBm  
 PRF = -5 dBm

### Absolute Maximum Ratings

LO Drive	20 dBm
Storage Temperature	-65 °C to 150 °C
Operating Temperature	-55 °C to 85 °C

ELECTROSTATIC SENSITIVE DEVICE  
OBSERVE HANDLING PRECAUTIONS

### Outline Drawing

### Die Packaging Information <sup>[1]</sup>

Standard	Alternate
GP-2 (Gel Pack)	[2]

[1] Refer to the "Packaging Information" section for die packaging dimensions.

[2] For alternate packaging information contact Hittite Microwave Corporation.

NOTES:

1. ALL DIMENSIONS ARE IN INCHES [MM].
2. TYPICAL BOND PAD IS .004" SQUARE.
3. BACKSIDE METALLIZATION: GOLD.
4. BACKSIDE METAL IS GROUND.
5. BOND PAD METALLIZATION: GOLD.
6. CONNECTION NOT REQUIRED FOR UNLABELED BOND PADS.
7. OVERALL DIE SIZE ±.002"

**Pad Descriptions**

Pad Number	Function	Pin Description	Interface Schematic
1	RF	This pad is DC coupled and matched to 50 Ohms.	
2	IF	This pad is DC coupled.	
3	LO	This pad is DC coupled and matched to 50 Ohms.	

**Assembly Diagram**

### Mounting & Bonding Techniques for Millimeterwave GaAs MMICs

The die should be attached directly to the ground plane eutectically or with conductive epoxy (see HMC general Handling, Mounting, Bonding Note).

50 Ohm Microstrip transmission lines on 0.127mm (5 mil) thick alumina thin film substrates are recommended for bringing RF to and from the chip (Figure 1). If 0.254mm (10 mil) thick alumina thin film substrates must be used, the die should be raised 0.150mm (6 mils) so that the surface of the die is coplanar with the surface of the substrate. One way to accomplish this is to attach the 0.102mm (4 mil) thick die to a 0.150mm (6 mil) thick molybdenum heat spreader (moly-tab) which is then attached to the ground plane (Figure 2).

Microstrip substrates should be placed as close to the die as possible in order to minimize bond wire length. Typical die-to-substrate spacing is 0.076mm to 0.152 mm (3 to 6 mils).

#### Handling Precautions

Follow these precautions to avoid permanent damage.

**Storage:** All bare die are placed in either Waffle or Gel based ESD protective containers, and then sealed in an ESD protective bag for shipment. Once the sealed ESD protective bag has been opened, all die should be stored in a dry nitrogen environment.

**Cleanliness:** Handle the chips in a clean environment. DO NOT attempt to clean the chip using liquid cleaning systems.

**Static Sensitivity:** Follow ESD precautions to protect against ESD strikes.

**Transients:** Suppress instrument and bias supply transients while bias is applied. Use shielded signal and bias cables to minimize inductive pick-up.

**General Handling:** Handle the chip along the edges with a vacuum collet or with a sharp pair of bent tweezers. The surface of the chip has fragile air bridges and should not be touched with vacuum collet, tweezers, or fingers.

#### Mounting

The chip is back-metallized and can be die mounted with AuSn eutectic preforms or with electrically conductive epoxy. The mounting surface should be clean and flat.

**Eutectic Die Attach:** A 80/20 gold tin preform is recommended with a work surface temperature of 255 °C and a tool temperature of 265 °C. When hot 90/10 nitrogen/hydrogen gas is applied, tool tip temperature should be 290 °C. DO NOT expose the chip to a temperature greater than 320 °C for more than 20 seconds. No more than 3 seconds of scrubbing should be required for attachment.

**Epoxy Die Attach:** Apply a minimum amount of epoxy to the mounting surface so that a thin epoxy fillet is observed around the perimeter of the chip once it is placed into position. Cure epoxy per the manufacturer's schedule.

#### Wire Bonding

RF bonds made with 0.003" x 0.0005" ribbon are recommended. These bonds should be thermosonically bonded with a force of 40-60 grams. DC bonds of 0.001" (0.025 mm) diameter, thermosonically bonded, are recommended. Ball bonds should be made with a force of 40-50 grams and wedge bonds at 18-22 grams. All bonds should be made with a nominal stage temperature of 150 °C. A minimum amount of ultrasonic energy should be applied to achieve reliable bonds. All bonds should be as short as possible, less than 12 mils (0.31 mm).

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
