## LC88F83B0A — CMOS IC FROM 128K byte, RAM 4096K byte on-chip 16-bit 1-chip Microcontroller

### Overview

The LC88F83B0A is a 16-bit microcontroller, centered around an Xstormy16 CPU, integrates on a single chip a number of hardware features such as 32-bit program counter, 16 bits  $\times$  16 general purpose register, 128K-byte flash ROM (onboard programmable), 4096-byte RAM, LCD display dedicated RAM, LCD dot matrix driver, on-chip debugging function, programmable timer, a base timer serving as a time-of-day clock, a synchronous SIO interface with automatic transmission capability, an asynchronous SIO (UART) interface, a 12-/8-bit resolution 4-channel AD converter, and a 12-source 11-vector interrupt feature.

### Features

#### ■Flash ROM

- 128K  $\times$  8bit (Table data reside in the same space.)

#### ■RAM

- 4240  $\times$  8bit
- For data 4096  $\times$  8bit
- For display 72  $\times$  16bit

#### ■LCD Display

- 64 segment  $\times$  16 common/72 segment  $\times$  8 common (1/4 bias)

\* This product is licensed from Silicon Storage Technology, Inc. (USA), and manufactured and sold by SANYO Semiconductor Co., Ltd.

■ Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

## LC88F83B0A

---

### ■ Instruction Execution Time (min)

- 31.0μs : 32.768kHz crystal used
- 15.6μs (typ) : Low speed RC oscillation (typ: 64kHz)
- 0.25μs : 4.0MHz ceramic filter oscillation
- 1.00μs (typ) : High speed RC oscillation (typ: 1MHz)

### ■ Power Supply Voltage

- 2.3V to 5.5V (Ta = -20 to 75°C) : 32.768kHz crystal used
- 2.3V to 5.5V (Ta = 0 to 60°C) : Low speed RC oscillation (typ: 64kHz)
- 2.4V to 5.5V (Ta = -20 to 75°C) : 4.0MHz ceramic filter oscillation
- 2.3V to 5.5V (Ta = 0 to 60°C) : High-speed RC oscillation (typ: 1MHz)
- 2.4V to 5.5V (Ta = -20 to 75°C) : When LCD ON

### ■ Consumption Current (3.0V):

- 10.5μA (typ)  
(Ta=25°C, crystal oscillation 32.768kHz, 1/1 dividing frequency, HALT, LCD: ON)
- 300μA (typ)  
(Ta=25°C, crystal oscillation 32.768kHz, CF 4MHz, 1/2 dividing frequency, HALT, LCD: ON)
- 2200μA (typ)  
(Ta=25°C, crystal oscillation 32.768kHz, CF 4MHz, 1/2 dividing frequency, continuous operation, LCD: ON)

### ■ Ports

- Normal withstand voltage I/O ports 20 (P0n, P1n, P20 to P23)
- LCD (COM8/SEG0 to COM15/SEG7 pins are multiplexed with COMMON and SEGMENT)
  - LCD drive bias power supply port 4 (VLCD1 to VLCD4)
  - Step-up capacitor port 2 (CUP00, CUP01)
- 16 common mode
  - Segment output 64 (SEG8 to SEG71)
  - Common output 16 (COM0 to COM15)
- 8 common mode
  - Segment output 72 (SEG0 to SEG71)
  - Common output 8 (COM0 to COM7)
- Oscillation pins 4 (XT1, XT2, CF1, CF2)
- Reset pin 1 (RESB)
- Test pin 1 (TST)
- LCD port power pins 2 (LCDVSS0, LCDVSS1)
- Power pins 2 (VDD, VSS)

### ■ LCD

- LCD power supply : Capacitor step-up type
- Number of dots : 1024 (64 segments × 16 commons) / 576 (72 segments × 8 commons)
- Contrast : Adjustable in 16 steps
- LCD frame frequency : Selectable from 4 types

## ■ Timers

- Timer 0: 16-bit timer that supports PWM/toggle outputs
  - 1) With 5-bit prescaler
  - 2) 8-bit PWM × 2/8-bit timer + 8-bit PWM mode selectable
  - 3) Clock source selectable from system clock, OSC0, OSC1, and internal RC oscillator
- Timer 1: 16-bit timer with capture registers
  - 1) With 5-bit prescaler
  - 2) May be divided into 2 channels of 8-bit timer
  - 3) Clock source selectable from system clock, OSC0, OSC1, and internal RC oscillator
- Timer 3: 16-bit timer that supports PWM/toggle outputs
  - 1) With 8-bit prescaler
  - 2) 8-bit timer × 2ch/8-bit timer + 8-bit PWM mode selectable
  - 3) Clock source selectable from system clock, OSC0, OSC1, and internal RC oscillator
- Timer 4: 16-bit timer that supports toggle outputs
  - 1) Clock source selectable from system clock and prescaler 0
- Timer 5: 16-bit timer that supports toggle outputs
  - 1) Clock source selectable from system clock and prescaler 0
- Base timer
  - 1) Clock may be selected from OSC0 (32.768kHz crystal oscillator) and frequency-divided output of system clock.
  - 2) Interrupts can be generated in 7 timing schemes.

## ■ Watchdog Timer

- 1) Driven by the base timer + internal watchdog timer dedicated counter.
- 2) Interrupt or reset mode selectable

## ■ SIO0: 8-bit synchronous SIO

- 1) LSB first/MSB first mode selectable
- 2) It is possible to communicate with 8 bits or less. (1 to 8 bits specifiable in 1-bit units)
- 3) Built-in 8-bit baudrate generator (transfer clock cycle 4 tCYC to 512 tCYC)
- 4) Automatic continuous data transmission (9 to 32768 bits specifiable in 1-bit units)
- 5) Interval function (interval time: 0 to 64 SIOCLKs specifiable in 1 SIOCLK units)
- 6) Wakeup function

## ■ UART2: Asynchronous SIO

- 1) Full duplex transmission
- 2) Start bit 1, data bit 8 (LSB first), stop bit 1
- 3) Parity bit: None/even parity/odd parity
- 4) Transfer rate: 8 to 4096 tCYC
- 5) Baudrate source clock: systemclock/OSC0/OSC1
- 6) Wakeup function

## ■ AD converter: 12bit × 4 channels

- 1) 12-/8-bit resolution selectable
- 2) Analog input: 4 channels
- 3) Comparator mode
- 4) Automatic reference voltage generation

## ■ Interrupts

- 12 sources, 11 vector addresses

- 1) Provides three levels of multiplex interrupt control. Any interrupt requests of the level equal to or lower than the current interrupt are not accepted.
- 2) When interrupt requests to two or more vector addresses occur at the same time, the interrupt of the highest level takes precedence over the other interrupts. For interrupts of the same level, the interrupt into the smallest vector address takes precedence.

No.	Vector Address	Interrupt Source
1	08000H	WATCHDOGTIMER
2	08004H	BASETIMER
3	08008H	TIMER0
4	08018H	SIO0
5	0801CH	TIMER1
6	08020H	UART2
7	08024H	TIMER3
8	08028H	TIMER4
9	0802CH	TIMER5
10	08030H	ADC
11	0803CH	P00 to P05 SEG71 to SEG64

- The priority level can be specified by three levels.
- Of interrupts of the same level, the one with the smallest vector address takes precedence.

## ■ Subroutine Stack Levels

- Max- whole RAM area (Stack is set in RAM)

## ■ Oscillation Circuits

- OSC1: For system clock  
ceramic oscillation with external CGC, CDC or RC oscillation (external RCR1)
  - OSC0: For low-speed system clock, base timer count, for LCD display  
32kHz crystal oscillation with external CGX, CDX or RC oscillation (external RCR0)
  - Internal oscillation circuit: Internal RC
- \* Depends on control resistor for each oscillator operation and stop.  
Initial setting - External oscillation stop, internal RC oscillation operation

# LC88F83B0A

## ■ Standby Function

- HALT mode: Halts instruction execution while allowing the peripheral circuits to continue operation.
  - 1) Oscillation is not halted automatically.
  - 2) Released by a system reset or occurrence of an interrupt.
- HOLD mode: Suspends instruction execution and the operation of the peripheral circuits.
  - 1) OSC1, internal RC and X'tal oscillators automatically stop operation.
  - 2) There are the following methods of resetting the HOLD.
    - (1) Setting the reset pin to the low level
    - (2) Having an interrupt source established in the SIO0
    - (3) Having an interrupt source established in the UART2
    - (4) Having an interrupt source established in the P00 to P05
    - (5) Having an interrupt source established in the SEG71 to SEG64
- X'tal HOLD mode: Suspends instruction execution and the operation of the peripheral circuits except using OSC0.
  - 1) The OSC1 and internal RC oscillators automatically stop operation.
  - 2) The state of OSC0 oscillation established when the X'tal HOLD mode is entered is retained.
  - 3) There are the following methods of resetting the X'tal HOLD mode.
    - (1) Setting the reset pin to the low level
    - (2) Having an interrupt source established in the base timer circuit
    - (3) Having an interrupt source established in the timers 0, 1, 3, 4, 5
    - (4) Having an interrupt source established in the SIO0
    - (5) Having an interrupt source established in the UART2
    - (6) Having an interrupt source established in the P00 to P05
    - (7) Having an interrupt source established in the SEG71 to SEG64

## ■ On-chip debugger

- Supports software debugging with the IC mounted on the target board.
- Supports tracing, realtime monitoring, and breakpoint setting.
- Single-wire communication

## ■ Package Form

- TQFP120(14×14): Lead-free type

## ■ Development Tools

- On-chip debugger : EOCUIF1 + LC88F83B0A
- Programming boards :

## Package Dimensions

unit : mm (typ)

3257A

# LC88F83B0A

## Pad Assignment

- Chip size (X × Y) : 3.40mm × 3.19mm
- Pad size : 59μm
- Pad pitch : 80μm
- Chip thickness : 280μm ± 20μm

Note: Pin numbers assigned to a package differ from pad numbers assigned to a chip.  
Numbers in the above figure show the pad numbers of the chip.

# LC88F83B0A

## Application circuit

X'tal	Crystal oscillator
CGX	Trimmer capacitor
C <sub>DX</sub>	Capacitance for X'tal
R <sub>CR0</sub>	Resistor for low-speed oscillation *4: RC oscillation specification
C <sub>CR0</sub>	Capacitor for low-speed oscillation *4: RC oscillation specification (**1)
(**1)	0.1μF capacitor is recommended when using XT1/XT2 as a system clock.
CF	Ceramic oscillator
C <sub>GC</sub>	Capacitance for CF
C <sub>DC</sub>	Capacitance for CF
R <sub>CR1</sub>	Resistor for high-speed oscillation *5: RC oscillation specification
C <sub>CR1</sub>	Capacitor for high-speed oscillation *5: RC oscillation specification
C1 to C5	Capacitor
C <sub>DEN</sub>	Electrolytic capacitor
C <sub>RES</sub>	Capacitance for RESB
RTST	Resister when on-chip debugger is used

		ΣIOAL(2)	PORT1	Total of all pins			60	
ΣIOAL(3)		PORT 0, 1, 2	Total of all pins			80		
Allowable power dissipation	Pd max	TQFP120(14×14)	Ta=-20 to +75°C				250	mW
Operating ambient temperature	Topg				-20		75	°C
Storage ambient temperature	Tstg				-65		125	

Note 1-1: The mean output current is a mean value measured over 100ms.

Note: We assume that the measurements for the allowable operating ranges and electrical characteristics described in this document are performed with the chip mounted in a package.

Although this product is shipped in chip form, the characteristic values listed in this document are measured with this IC mounted on a SANYO-designated package at operating ambient temperature range of -20°C to +70°C. The specifications of this product in package form or in chip forms are basically identical, however, the characteristics of the product in chip form may vary depending on the board on which the product is mounted, the bonding pressure, and the type of mold resin used.

### AD Converter Characteristics at $V_{SS} = LCDV_{SS0} = LCDV_{SS1} = 0V$

<12-bits AD Converter Mode/ $T_a = -10^{\circ}C$  to  $+75^{\circ}C$ >

Parameter	Symbol	Pin/Remarks	Conditions	Specification				
				$V_{DD}[V]$	min	typ	max	unit
Resolution	N	AN0(SEG71) to AN3(SEG68)		2.9 to 5.5		12		bit
Absolute accuracy	ET		(Note7-1)	2.9 to 5.5			$\pm 16$	LSB
Conversion time	TCAD		See Conversion time calculation formulas. (Note7-2)	2.9 to 5.5	90		130	$\mu s$
Analog input voltage range	VAIN			2.9 to 5.5	$V_{SS}$		$V_{DD}$	V
Analog ports input current	IAINH		$VAIN = V_{DD}$	2.9 to 5.5			1	$\mu A$
	IAINL	$VAIN = V_{SS}$	2.9 to 5.5	-1				

<8-bits AD Converter Mode/ $T_a = -10^{\circ}C$  to  $+75^{\circ}C$ >

Parameter	Symbol	Pin/Remarks	Conditions	Specification				
				$V_{DD}[V]$	min	typ	max	unit
Resolution	N	AN0(SEG71) to AN3(SEG68)		2.9 to 5.5		8		bit
Absolute accuracy	ET		(Note7-1)	2.9 to 5.5			$\pm 1.5$	LSB
Conversion time	TCAD		See Conversion time calculation formulas. (Note7-2)	2.9 to 5.5	55		75	$\mu s$
Analog input voltage range	VAIN			2.9 to 5.5	$V_{SS}$		$V_{DD}$	V
Analog ports input current	IAINH		$VAIN = V_{DD}$	2.9 to 5.5			1	$\mu A$
	IAINL	$VAIN = V_{SS}$	2.9 to 5.5	-1				

<Conversion Time Calculation Formulas>

12-bits AD Converter Mode:  $TCAD$  (Conversion time) =  $((52/(\text{Division ratio}))+2) \times t_{CYC}$

8-bits AD Converter Mode:  $TCAD$  (Conversion time) =  $((32/(\text{Division ratio}))+2) \times t_{CYC}$

<Recommended Operating Conditions>

External Oscillator $F_{mCF}[\text{MHz}]$	Operating Supply Voltage Range $V_{DD}[V]$	System Division Ratio ( $SYSDIV$ )	Cycle Time $t_{CYC}[\text{ns}]$	AD Division Ratio ( $ADDIV$ )	AD Conversion Time ( $TCAD$ )[ $\mu s$ ]	
					12-bit AD	8-bit AD
CF-4	2.9 to 4.0	1/1	250	1/8	104.5	64.5
		1/2	500	1/4	105.0	65.0

Note 7-1: The quantization error ( $\pm 1/2LSB$ ) must be excluded from the absolute accuracy. The absolute accuracy must be measured in the microcontroller's state in which no I/O operations occur at the pins adjacent to the analog input channel.

Note 7-2: The conversion time refers to the period from the time an instruction for starting a conversion process till the time the conversion results register(s) are loaded with a complete digital conversion value corresponding to the analog input value.

The conversion time is 2 times the normal-time conversion time when:

- The first AD conversion is performed in the 12-bit AD conversion mode after a system reset.
- The first AD conversion is performed after the AD conversion mode is switched from 8-bit to 12-bit conversion mode.

## Characteristics of a Sample OSC1 System Clock Oscillation Circuit

Given below are the characteristics of a sample OSC1 system clock oscillation circuit that are measured using a SANYO-designated oscillation characteristics evaluation board and external components with circuit constant values with which the oscillator vendor confirmed normal and stable oscillation.

Table 1 Characteristics of a Sample OSC1 System Clock Oscillator Circuit with a Ceramic Oscillator

Nominal Frequency	Vendor Name	Oscillator Name	Circuit Constant				Operating Voltage Range [V]	Oscillation Stabilization Time		Remarks
			C1 [pF]	C2 [pF]	Rf1 [ $\Omega$ ]	Rd1 [ $\Omega$ ]		typ [ms]	max [ms]	
4.194MHz	MURATA	CSTCR4M00G53-R0	(15)	(15)	OPEN	0	2.4 to 5.5	0.1	0.5	Internal C1,C2
		CSTLS4M00G53-B0	(15)	(15)	OPEN	0	2.4 to 5.5	0.1	0.5	
4.000MHz	MURATA	CSTCR4M00G53-R0	(15)	(15)	OPEN	0	2.4 to 5.5	0.1	0.5	Internal C1,C2
		CSTLS4M00G53-B0	(15)	(15)	OPEN	0	2.4 to 5.5	0.1	0.5	

The oscillation stabilization time refers to the time interval that is required for the oscillation to get stabilized after the following reference timing points: (See Figure 4)

- VDD goes above the operating voltage lower limit.
- An instruction for starting the OSC1 clock oscillator circuit is executed.
- Oscillation starts after the microcontroller exits the X'tal HOLD mode with the ENOSC1 bit (OCR0 register, bit 1) set to 1.

## Characteristics of a Sample OSC0 System Clock Oscillator Circuit

Given below are the characteristics of a sample OSC0 system clock oscillation circuit that are measured using a SANYO-designated oscillation characteristics evaluation board and external components with circuit constant values with which the oscillator vendor confirmed normal and stable oscillation.

Table 2 Characteristics of a Sample OSC0 System Clock Oscillator Circuit with a CF Oscillator

Nominal Frequency	Vendor Name	Oscillator Name	Circuit Constant				Operating Voltage Range [V]	Oscillation Stabilization Time		Remarks
			C3 [pF]	C4 [pF]	Rf2 [ $\Omega$ ]	Rd2 [ $\Omega$ ]		typ [s]	max [s]	
32.768kHz	EPSON TOYOCOM	MC-306	18	18	OPEN	390k	2.3 to 5.5	1.3	3.0	Applicable CL value=12.5pF SMD-type

The oscillation stabilization time refers to the time interval that is required for the oscillation to get stabilized after the instruction for starting the OSC0 clock oscillation circuit is executed. (See Figure 4)

Note: The components that are involved in oscillation should be placed as close to the IC and to one another as possible because they are vulnerable to the influences of the circuit pattern.

# LC88F83B0A

Note:  
Select  $C_{RES}$  and  $R_{RES}$  values to assure that at least  $50\mu s$  reset time is provided after the  $V_{DD}$  becomes higher than the minimum operating voltage.

Note: The oscillation frequency changes with the board pattern and used parts when OSC1 and OSC0 are used as the RC oscillation. It also greatly depends on the product shape (chip and plastic package) and the board capacitance, and it is recommended to evaluate the resistor value with an actual product. Use the following characteristics as only for a reference.

Figure 8 Characteristics of Resistor v.s. Frequency of OSC1

Figure 9 Characteristics of Resistor v.s. Frequency of OSC0

- SANYO Semiconductor Co.,Ltd. assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein.
- SANYO Semiconductor Co.,Ltd. strives to supply high-quality high-reliability products, however, any and all semiconductor products fail or malfunction with some probability. It is possible that these probabilistic failures or malfunction could give rise to accidents or events that could endanger human lives, trouble that could give rise to smoke or fire, or accidents that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor Co.,Ltd. products described or contained herein are controlled under any of applicable local export control laws and regulations, such products may require the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written consent of SANYO Semiconductor Co.,Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO Semiconductor Co.,Ltd. product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production.
- Upon using the technical information or products described herein, neither warranty nor license shall be granted with regard to intellectual property rights or any other rights of SANYO Semiconductor Co.,Ltd. or any third party. SANYO Semiconductor Co.,Ltd. shall not be liable for any claim or suits with regard to a third party's intellectual property rights which has resulted from the use of the technical information and products mentioned above.

This catalog provides information as of March, 2011. Specifications and information herein are subject to change without notice.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
