

S1C17W14/W16 (rev1.0)

16-bit Single Chip Microcontroller

- Low power operation from 1.2V with a single alkaline or silver oxide button battery.
- Low power consumption standby driving at HALT 0.3 μ A .
*super economy mode
- Built-in LCD Driver: 50 SEG x 8 COM (max.) S1C17W14
Built-in LCD Driver: 56 SEG x 8 COM (max.) S1C17W16

■ DESCRIPTIONS

The S1C17W14/W16 is a 16-bit MCU that features low-voltage operation from 1.2 V even though Flash memory is included. The embedded high-efficiency DC-DC converter generates the constant-voltage to drive the IC with lower power consumption than 4-bit MCUs. This IC includes a real-time clock, a stopwatch, an LCD driver, and a PWM timer capable of being used to generate drive waveforms for a motor driver as well as a high-performance 16-bit CPU. It is suitable for battery-driven applications that require an LCD display and timers.

■ FEATURES

Model	S1C17W14		S1C17W16	
CPU				
CPU core	Seiko Epson original 16-bit RISC CPU core S1C17			
Other	On-chip debugger			
Embedded Flash memory				
Capacity	48K bytes (for both instructions and data)	64K bytes (for both instructions and data)		
Erase/program count	50 times (min.) * Programming by the debugging tool ICDmini			
Other	Security function to protect from reading/programming by ICDmini On-board programming function using ICDmini			
Embedded RAM				
Capacity	4K bytes	8K bytes		
Embedded display RAM				
Capacity	108 bytes	120 bytes		
Clock generator (CLG)				
System clock source	4 sources (IOSC/OSC1/OSC3/EXOSC)			
System clock frequency (operating frequency)	1.1 MHz (max.) V _{DD} = 1.2 to 1.6 V			
	4.2 MHz (max.) V _{DD} = 1.6 to 3.6 V			
IOSC oscillator circuit (boot clock source)	700 kHz (typ.) embedded oscillator			
	23 μs (max.) starting time (time from cancelation of SLEEP state to vector table read by the CPU)			
OSC1 oscillator circuit	32.768 kHz (typ.) crystal oscillator			
	Oscillation stop detection circuit included			
OSC3 oscillator circuit	4.2 MHz (max.) crystal/ceramic oscillator			
	256, 384, 500 kHz, 1, 2, and 4 MHz-switchable embedded oscillator			
	2.1 MHz (max.) CR oscillator (an external R is required)			
EXOSC clock input	4.2 MHz (max.) square or sine wave input			
Other	Configurable system clock division ratio			
	Configurable system clock used at wake up from SLEEP state			
	Operating clock frequency for the CPU and all peripheral circuits is selectable.			
I/O port (PPORT)				
Number of general-purpose I/O ports	Input/output port: 32 bits (max.)		Input/output port: 39 bits (max.)	
	Output port: 1 bit (max.)			
	Pins are shared with the peripheral I/O.			
Number of input interrupt ports	28 bits	35 bits		
Number of ports that support universal port multiplexer (UPMUX)	24 bits	30 bits		
	A peripheral circuit I/O function selected via software can be assigned to each port.			
Timers				
Watchdog timer (WDT)	Generates watchdog timer reset.			
Real-time clock (RTCA)	128–1 Hz counter, second/minute/hour/day/day of the week/month/year counters			
	Theoretical regulation function for 1-second correction			
	Alarm and stopwatch functions			

S1C17W14/W16

16-bit timer (T16)	3 channels	5 channels
	Generates the SPIA master clocks	Generates the SPIA master clocks and trigger signal of ADC12A
16-bit PWM timer (T16B)	2 channels	
	Event counter/capture function	
	PWM waveform generation function	
	Number of PWM output or capture input ports: 2 ports/channel	
Supply voltage detector (SVD)		
Detection level	30 levels (1.2 to 3.6 V)	
Detection accuracy	± 3 %	
Other	Intermittent operation mode	
	Generates an interrupt and reset according to the detection level evaluation.	
Serial interfaces		
UART (UART)	2 channels	
	Baud-rate generator included, IrDA1.0 supported	
Synchronous Serial Interface (SPIA)	2 channels	3 channels
	2 to 16-bit variable data length	
	The 16-bit timer (T16) can be used for the baud-rate generator in master mode.	
I2C (I2C)	1 channel	
	Baud-rate generator included	
Sound generator (SNDA)		
Buzzer output function	512 Hz to 16 kHz output frequencies	
	One-shot output function	
Melody generation function	Pitch: 128 Hz to 16 kHz ≐ C3 to C6	
	Duration: 7 notes/rests (Half note/rest to thirty-second note/rest)	
	Tempo: 16 tempos (30 to 480)	
	Tie/Slur may be specified.	
IR remote controller (REMC2)		
Number of transmitter channels	1 channel	
Other	EL lamp drive waveform can be generated for an application example.	
LCD driver (LCD8B)		
LCD output	50 SEG × 5–8 COM (max.), 54 SEG × 1–4 COM (max.)	56 SEG × 5–8 COM (max.), 60 SEG × 1–4 COM (max.)
LCD contrast	16 levels	
Other	1/3 bias power supply included, external voltage can be applied.	
R/F converter (RFC)		
Conversion method	CR oscillation type with 24-bit counters	
Number of conversion channels	1 channel (Up to two sensors can be connected.)	2 channels (Up to two sensors can be connected to each channel.)
Supported sensors	DC-bias resistive sensors, AC-bias resistive sensors	DC-bias resistive sensors, AC-bias resistive sensors (Ch.0 only)
12-bit A/D converter (ADC12A)		
Conversion method	-	Successive approximation type
Resolution	-	12 bits
Number of conversion channels	-	1 channel
Number of analog signal inputs	-	4 ports/channel
Multiplier/divider (COPRO2)		
Arithmetic functions	16-bit × 16-bit multiplier	
	16-bit × 16-bit + 32-bit multiply and accumulation unit	
	32-bit ÷ 32-bit divider	
Reset		
#RESET pin	Reset when the reset pin is set to low.	
Power-on reset	Reset at power on.	
Key entry reset	Reset when the P00 to P01/P02/P03 keys are pressed simultaneously (can be enabled/disabled using a register).	
Watchdog timer reset	Reset when the watchdog timer overflows (can be enabled/disabled using a register).	
Supply voltage detector reset	Reset when the supply voltage detector detects the set voltage level (can be enabled/disabled using a register).	
Interrupt		
Non-maskable interrupt	4 systems (Reset, address misaligned interrupt, debug, NMI)	
Programmable interrupt	External interrupt: 1 system (8 levels)	
	Internal interrupt: 18 systems (8 levels)	Internal interrupt: 23 systems (8 levels)

S1C17W14/W16

Power supply voltage		
V _{DD} operating voltage	1.2 to 3.6 V	
V _{DD} operating voltage for Flash programming	1.8 to 3.6 V (V _{PP} = 7.5 V external power supply is required.)	
V _{DD} operating voltage for super economy mode	2.5 to 3.6 V	
Operating temperature		
Operating temperature range	-40 to 85 °C	
Current consumption		
SLEEP mode	0.15 μA IOSC = OFF, OSC1 = OFF, OSC3 = OFF	
HALT mode	0.5 μA OSC1 = 32 kHz, RTC = ON	
	0.3 μA OSC1 = 32 kHz, RTC = ON, super economy mode	
RUN mode	6 μA OSC1 = 32 kHz, RTC = ON, CPU = OSC1	
	3 μA OSC1 = 32 kHz, RTC = ON, CPU = OSC1, super economy mode	
	200 μA OSC3 = 1 MHz (internal oscillator), OSC1 = 32 kHz, RTC = ON, CPU = OSC3	
Shipping form		
1	QFP15-100pin (Lead pitch: 0.5 mm)	TQFP15-128pin (Lead pitch: 0.4 mm)
2	Die form (Pad pitch: 80 μm (min.))

■ Pin Descriptions

Symbol meanings

Assigned signal:	The signal listed at the top of each pin is assigned in the initial state. The pin function must be switched via software to assign another signal (see the “I/O Ports” chapter).		
I/O:	I	= Input	
	O	= Output	
	I/O	= Input/output	
	P	= Power supply	
	A	= Analog signal	
Initial state:	Hi-Z	= High impedance state	
	I (Pull-up)	= Input with pulled up	
	I (Pull-down)	= Input with pulled down	
	Hi-Z	= High impedance state	
	O (H)	= High level output	
	O (L)	= Low level output	
Tolerant fail-safe structure:	✓	= Over voltage tolerant fail-safe type I/O cell included (see the “I/O Ports” chapter)

Notes: · In the peripheral circuit descriptions, the assigned signal name is used as the pin name.

S1C17W14/W16

Universal port multiplexer (UPMUX)

The universal port multiplexer (UPMUX) allows software to select the peripheral circuit input/output function to be assigned to each pin from those listed below.

Peripheral circuit	Signal to be assigned	I/O	Channel number <i>n</i>	Function
Synchronous serial interface (SPIA)	SDIn	I	S1C17W14: <i>n</i> = 0, 1	SPIA Ch. <i>n</i> data input
	SDOn	O	S1C17W16: <i>n</i> = 0, 1, 2	SPIA Ch. <i>n</i> data output
	SPICLK <i>n</i>	I/O		SPIA Ch. <i>n</i> clock input/output
	#SPISS <i>n</i>	I		SPIA Ch. <i>n</i> slave-select input
I2C (I2C)	SCL <i>n</i>	I/O	S1C17W14: <i>n</i> = 0	I2C Ch. <i>n</i> clock input/output
	SDA <i>n</i>	I/O	S1C17W16: <i>n</i> = 0	I2C Ch. <i>n</i> data input/output
UART (UART)	USIN <i>n</i>	I	S1C17W14: <i>n</i> = 0, 1	UART Ch. <i>n</i> data input
	USOUT <i>n</i>	O	S1C17W16: <i>n</i> = 0, 1	UART Ch. <i>n</i> data output
16-bit PWM timer (T16B)	TOUT <i>n</i> 0/CAP <i>n</i> 0	I/O	S1C17W14: <i>n</i> = 0, 1	T16B Ch. <i>n</i> PWM output/capture input 0
	TOUT <i>n</i> 1/CAP <i>n</i> 1	I/O	S1C17W16: <i>n</i> = 0, 1	T16B Ch. <i>n</i> PWM output/capture input 1

Note: Do not assign a function to two or more pins simultaneously.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
