## Application Information

### Input Reference

When operating with a crystal input reference, do not apply a switching signal to REF\_IN.

### Crystal Layout

Keep the layers under the crystal as open as possible and do not place switching signals or noisy supplies under the crystal.

Crystal load capacitance is built inside the die so no external capacitance is needed. See the *Selecting a quartz crystal for the Clockworks Flex I Family of Precision Synthesizers* application note for further details.

Contact Micrel's HBW applications group if you need assistance on selecting a suitable crystal for your application at [hbwhelp@micrel.com](mailto:hbwhelp@micrel.com)

### Notes:

5. All phase-noise measurements were taken with an Agilent 5052B phase-noise system.
6. Measured using a 25MHz crystal as the input reference source. If using an external reference input, use a low phase noise source. With an external reference, the phase noise will follow the input source phase noise up to about 1MHz offset.
