

Type USF Ultra-Stable Low TC Film Resistors

200 Series and 300 Series

New

Zero Nominal TC — Maximum Absolute TC to 2 ppm/°C, -40°C to +85°C ref. to +25°C

Absolute Tol. to ±0.01%, Resistance Range 50 Ohm to 25 Megohm, Voltage Ratings up to 2500 Volts

The USF Ultra-Stable Low TC Ultra-Precision Film Resistors were developed to meet the requirements for increasing performance for resistors in high performance analog electronics. **Utilizing Caddock proprietary resistance film systems, the Type USF resistors provide the Lowest TC with the Widest Resistance Range and the Highest Voltage Ratings available in the industry.**

- Resistance Range 50 ohm to 25 Megohm.
- Temperature Coefficient -40°C to +85°C, referenced to +25°C
200 Series — **ZERO Nominal TC** — Maximum Absolute TC 2 ppm/°C
300 Series — **ZERO Nominal TC** — Maximum Absolute TC 5 ppm/°C
- Tolerance: ±0.01% or ±0.10%.
- Specific standard resistance values are available that are most commonly required in high accuracy analog design. These values were selected and optimized for produceability and performance.
- 300 Series “matched pairs” are available with ratio TC as tight as 0.5 ppm/°C. Contact Applications Engineering.
- Ceramic package provides cool operation.

Type USF Ultra-Stable Resistors are offered in standard resistance values that are most commonly used in precision analog design. These standard resistance values can be used in precise amplifier gain setting, precise resistor bridge circuits, precise transducer sense circuits, and precise voltage dividers with up to 2500 volt input voltage.

Extremely Low Power Coefficient (Wattage Coefficient): Type USF resistors are constructed with an aluminum oxide ceramic sandwich which provides great thermal conductivity. The ceramic sandwich package very effectively minimizes the power coefficient drift. Power coefficient is the resistance drift due to temperature rise in the element caused by the power (wattage) dissipation in the resistor where the self-heating temperature rise of the resistor element results in TC drift (temp. rise in °C, times the temperature coefficient of the resistor). In the USF package, heat is pulled away from the resistance material efficiently by this ceramic sandwich package construction. Plastic molded Low TC foil resistors cannot provide this outstanding benefit since the plastic impedes the flow of heat, causing greater temperature rise at the resistor element and greater self-heating related resistance drift due to power dissipation. The USF 200 Series resistors provide a new level of performance with near ZERO TC, very low power coefficient, wide resistance range, and higher voltage ratings than is offered by other resistor technologies.

Type USF 200 Series Ultra-Stable Resistors

- Constructed with two selected USF 300 Series Resistors bonded back to back to achieve outstanding low Absolute Temperature Coefficient performance. The resistors are to be connected in parallel on the circuit board.
- **ZERO Nominal TC** — Max. Absolute TC: 2 ppm/°C, -40°C to +85°C, referenced to +25°C

Type USF 300 Series Ultra-Stable Resistors

- **ZERO Nominal TC** — Max. Absolute TC: 5 ppm/°C, -40°C to +85°C, referenced to +25°C

Specifications:

Resistance Tolerance: $\pm 0.01\%$ or ± 0.10 measured at $+23^{\circ}\text{C} \pm 2^{\circ}\text{C}$.

Absolute Temperature Coefficient: TC referenced to $+25^{\circ}\text{C}$, ΔR taken at -40°C and $+85^{\circ}\text{C}$.

Load Life Stability: 2,000 hours at $+85^{\circ}\text{C}$ at rated voltage, not to exceed rated power, ΔR ($+0.015 \pm 0.015$)% max.

10,000 hours at $+85^{\circ}\text{C}$ at rated voltage, not to exceed rated power, ΔR ($+0.030 \pm 0.030$)% max.

Thermal Shock: Mil-Std-202 Method 107 condition A, except min. temp. is -40°C , $\Delta R \pm 0.01\%$ maximum.

Voltage Coefficient: USF270 at 5 Meg, and USF271, USF370, USF371 at resistances of 9 Meg or greater, 0.02 ppm/volt maximum.

Shelf Life Stability: Typical $+(20\text{ppm} \pm 20\text{ppm})/\text{yr.}$ after 1 year. Extended shelf life (ten years) 10ppm/year maximum.

Operating Temperature: -40°C to $+85^{\circ}\text{C}$.

Leadwire: Solder Coated Copper.

Ordering Information USF300 Series:

Custom USF 200 Series and 300 Series Resistors:

USF 200 Series and 300 Series Resistors are available, for high quantity applications, with custom performance:

- In the 200 Series, Absolute TC to as tight as 1ppm/ $^{\circ}\text{C}$ is available for certain resistances.
- Matched Ratio TC to as tight as 0.5ppm/ $^{\circ}\text{C}$ for equal resistances.
- Matched Ratio TC can be provided in the 200 Series style "bonded" Resistor pairs.

Other Low TC Resistor Products from Caddock:

- Type TF Low TC Ultra-Precision Film Resistors (1K to 125Meg)
- Type TN Lab Grade Low TC Precision Film Resistors
- Type TK Low TC Precision Radial-Lead Film Resistors
- Type TG Low TC Precision High Voltage Resistors (up to 30KV)
- T912 and T914 Low TC Ultra-Precision Resistor Networks
- Type USVD Ultra-Stable Voltage Dividers (up to 2500V)
- Type THV Precision High Voltage Dividers (up to 20KV)

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
