The new TSRN-1SM series are step-down non-isolated switching regulators in compact SMD package. They are an ideal solution to replace inefficient linear regulators. The high efficiency up to 95 % allows full load operation up to $+55^{\circ}\text{C}$ ($+85^{\circ}\text{C}$ with derating) ambient temperature without the need of forced aircooling.

The TSRN-1SM switching regulators provide other significant features over linear regulators, i.e. better output accuracy ($\pm 2\%$), lower standby current of $\sim 4\text{ mA}$ and no requirement of external capacitors. They are suitable for positive or negative output circuits and offer a trim input for output voltage adjustment. The high efficiency, low standby power consumption and remote On/Off function make these regulators an ideal solution for energy sensitive applications.

1) Same order code for positive and negative output operation, see page 3 for circuits.

2) For input voltage higher 36 VDC an input capacitor 22 μF / 50 V is required.

3) For positive output circuit, input voltage must be higher than output voltage set: $>0.5\text{ V}$ for TSRN1-0525SM and $>1.5\text{ V}$ for other models.
For negative output circuit, input voltage plus absolute output voltage set must not exceed 36 VDC ($V_{\text{in}} + |V_{\text{out}}| < 36\text{ VDC}$)
