# 100% Control...

High starting torque and torque control capability in open loop mode gives you full control of your machine dynamics and performance. Options for all of the major fieldbus systems and a 24 VDC external supply keeps you in full control of your machine operation.

## Torque master

The 3G3MX2 delivers 200% starting torque near stand-still (0.5 Hz) and can operate in torque control in open loop mode. This allows the 3G3MX2 to be used in applications where closed loop AC vector drives were previously used.

## Easy network integration

Built-in RS485 Modbus communications and the possibility for integration in standard industrial networks, such as DeviceNet, Profibus, EtherNet/IP, CompoNet, ML-II or EtherCat makes the 3G3MX2 exceptionally easy to integrate.

## External 24 VDC for continuous operation

With no additional hardware, a 24 VDC connection to the 3G3MX2 ensures the CPU is always in control, even if the main input is removed. This feature is vital in providing a controlled stop in emergency situations and in keeping the network communications operating.

# ...0% risk!

Safety is embedded in the 3G3MX2, according to ISO 13849-1, Cat 3, with two safety inputs and an External Device Monitoring (EDM) output. No external contactors on the motor side are required, meaning simpler wiring for the user.

## Safety embedded; ISO 13849-1, Cat 3

Dual contactors at the output of the Drive are no longer required. Direct connection to a safety controller ensures compliance to ISO 13849-1, Cat 3.

## EDM monitoring output

An External Device Monitoring (EDM) output confirms the safety status of the Drive, saving you the cost and wiring of external devices to carry out the same function.

## Direct integration into the safety circuit

3G3MX2 Drives can fit easily into the safety circuit. The safety inputs can be linked from one drive to another without additional safety relays.

# Position and run!

The 3G3MX2 is a drive and position controller in one, ideal for modular machines where moderate positional accuracy is required. Speed synchronization is also possible, with no additional programming required.

## Speed synchronization

With no external hardware required, and via standard parameter settings, speed synchronization can be achieved. The 3G3MX2 will act as a speed follower to an external pulse generator/ encoder signal up to 32 kHz.

## Positioning functionality

Specially developed application functionality enables the 3G3MX2 to solve simple positioning tasks without the need for an external controller. Up to 8 positions, plus home, can be selected by the user, and furthermore, the 3G3MX2 can be switched between speed and position mode.

# Program and play!

The 3G3MX2 gives you the power to create smart solutions using PLC functionality, as standard. Via an intuitive flow chart programming tool, you can create programs with up to 1000 lines of code and with 5 tasks running in parallel.

## Free to program

- Intuitive and user friendly flow chart programming
- Integrated in CX-Drive
- Up to 1000 lines in a program
- 5 tasks can run in parallel

Standard Connections

\*1 Connect to terminals L1 and N on a single-phase, 200-V AC Drive (3G3MX2-AB□□□).  
\*2 Optional.

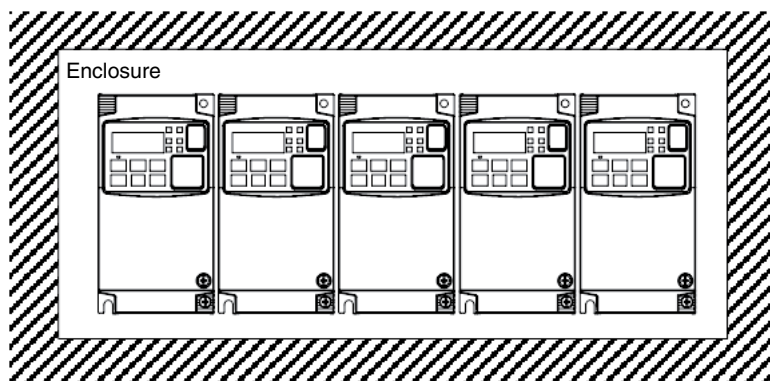

Main Circuit Terminals

Terminal symbol	Terminal name	Description
R/L1, L1, S/L2, T/L3, N	Main power supply input terminal	Connect the input AC power supply. Connect to terminals L1 and N on a single-phase, 200-V AC Drive (3G3MX2-AB□□□).
U/T1, V/T2, W/T3	Drive output terminal	Connect a 3-phase motor.
+1, P/+2	DC reactor connection terminal	Remove the shorting bar between terminals +1 and P/+2, and connect the optional DC reactor.
P/+2, RB	Braking Resistor connection terminal	Connect optional braking resistors. (If a braking torque is required)
P/+2, N/-	Regenerative braking unit connection terminal	Connect optional regenerative braking units. (When braking torque is required or the built-in braking circuit is not sufficient)
G	Ground terminal	This is a ground terminal. Connect this terminal to the ground. Provide Class D grounding for 200 V class models, and class C grounding for 400 V class models. On 200 V class models of 3.7 kW or below and 400 V class models of 4.0 kW or below, the ground terminal is located on the cooling fin.

**Control Circuit Terminals**

Terminal symbol		Terminal name	Description	Specifications	
Analog	Power supply	SC	Input signal common	This is a common terminal used by the internal power supply, digital input and analog input/output terminals.	
		FS	Frequency reference power supply	10 VDC power supply for the FV terminal. Allowable max. current: 7 mA	
	Frequency setting input	FV	Frequency reference input terminal (analog voltage input)	Use this terminal if the frequency reference is provided by 0 to 10 VDC voltage input. Input impedance Approx. 10 kΩ Allowable input voltage range -0.3 to +12 VDC	
		FI	Frequency reference terminal (analog current input)	Use this terminal if the frequency reference is provided by 4 to 20 mA current input. Input impedance 100 Ω Allowable input range 0 to 24 mA
