

# GIGABIT ETHERNET 850NM MULTIMODE SFP TRANSCEIVERS WITH DIGITAL DIAGNOSTICS

TRPUG1ESX000E2G

## Product Description

The TRPUG1ESX-E2G fiber optic transceiver with integrated digital diagnostics monitoring functionality provides a quick and reliable interface for 1000BASE-SX Gigabit Ethernet applications. The diagnostic functions, alarm and warning features as described in the Multi-Source Agreement (MSA) document, SFF-8472 (Rev.9.5), are provided via an I<sup>2</sup>C serial interface.

The module satisfies Class 1 Laser Safety requirements in accordance with the U.S.FDA/CDRH and international IEC-60825 standards.

The transceiver connects to a standard 20-pad SFP connectors for hot plug capability. This allows the system designer to make configuration changes or maintenance by simply plugging in different types of transceivers without removing the power supply from the host system.

The transceiver has a bail-type latch, which offers an easy and convenient way to release the modules. The latch is compliant with the SFP MSA.

The transmitter and receiver DATA interfaces are AC-coupled internally. LV-TTL Transmitter Disable control input and Loss of Signal output interfaces are also provided.

The transceivers operate from a single +3.3V power supply over operating case temperature ranges of -5°C to +70°C (Commercial), -5°C to +85°C (Extended) or -40°C to +85°C(Industrial) . The housing is made of metal for EMI immunity.

## Features

- Compliant with IEEE 802.3ah Gigabit Ethernet 1000BASE-SX PMD Specifications
- Compliant with SFP MSA
- Digital Diagnostics through Serial Interface
- Internal Calibration for Digital Diagnostics
- 850nm Oxide VCSEL laser transmitter
- Up to 550m with 50/125µm MMF
- Up to 300m with 62.5/125µm MMF
- Eye Safe (Class 1 Laser Safety)
- Duplex LC Optical Interface
- Loss of Signal Output & TX Disable Input
- Wide Operating Case Temperature Option
- Hot-pluggable
- Single +3.3V Power Supply
- RoHS Compliant

### Application Notes

**Electrical interface:** All signal interfaces are compliant with the SFP MSA specification. The high speed DATA interface is differential AC-coupled internally with  $0.1\mu\text{F}$  and can be directly connected to a 3.3V SERDES IC. All low speed control and sense output signals are open collector TTL compatible and should be pulled up with a  $4.7\text{-}10\text{k}\Omega$  resistor on the host board.

**Loss of Signal (LOS):** The Loss of Signal circuit monitors the level of the incoming optical signal and generates logic HIGH when an insufficient photocurrent is produced.

**TX\_Fault:** The output indicates LOW when the transmitter is operating normally and HIGH with a laser fault including laser end-of-life. TX Fault is an open collector/drain output

and should be pulled up with a  $4.7\text{-}10\text{k}\Omega$  resistor on the host board. TX Fault is non-latching (automatically deasserts when fault goes away).

**TX\_Disable:** When the TX Disable pin is at logic HIGH, the transmitter optical output is disabled.

**Serial Identification and Monitoring:** The module definition of SFP is indicated by the three module definition pins, MOD\_DEF(0), MOD\_DEF(1) and MOD\_DEF(2).

Upon power up, MOD\_DEF(1:2) appear as NC (no connection), and MOD\_DEF(0) is TTL LOW. When the host system detects this condition, it activates the serial protocol (standard two-wire I<sup>2</sup>C serial interface) and generates the serial clock signal

(SCL). The positive edge clocks data into the EEPROM segments of the SFP that are not write protected, and the negative edge clocks data from the SFP.

The serial data signal (SDA) is for serial data transfer. The host uses SDA in conjunction with SCL to mark the start and end of serial protocol activation. The supported monitoring functions are temperature, voltage, bias current, transmitter power, average receiver signal, all alarms and warnings, and software

monitoring of TX Fault/LOS. The device is internally calibrated.

The data transfer protocol and the details of the mandatory and vendor specific data structures are defined in SFP MSA, and SFF-8472, Rev. 9.5.

**Power supply and grounding:** The power supply line should be well-filtered. All 0.1 $\mu$ F power supply bypass capacitors should be as close to the transceiver module as possible.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибуторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибуторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помочь разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
