

Product Description

Qorvo's TGA2813-CP is a packaged high-power S-Band amplifier fabricated on Qorvo's QGaN25 0.25 μm GaN on SiC process. Operating from 3.1 to 3.6 GHz, the TGA2813-CP achieves 100 W saturated output power, a power-added efficiency of $> 50\%$, and power gain of 23 dB.

The TGA2813-CP is packaged in a 10-lead 15x15 mm bolt-down package with a Cu base for superior thermal management. It can support a range of bias voltages and performs well under both short and long pulse conditions. Both RF ports are internally DC blocked and matched to 50 ohms allowing for simple system integration.

Assembly Notes

1. Carefully clean the PC board and package leads with alcohol. Allow it to dry fully.
2. To improve the thermal and RF performance, Qorvo recommends attaching a heat sink to the bottom of the PCB and apply thermal compound (Arctic Silver 5 recommended) or 4 mil indium shim between the heat sink and the package.
3. (The following is for *information only*. There are many variables in a second level assembly that Qorvo does not control, so Qorvo does not recommend an absolute torque value.) Use screws to attach the component to the heat sink. A suggested torque value is 16 in-oz. for a 0-80 screw. Start with screws finger tight, then torque to 8 in-oz., then torque to final value. Use the following tightening pattern:

4. Apply no-flux solder to each pin of the TGA2813-CP. The component leads should be manually soldered, and the package cannot be subjected to conventional reflow processes. The use of no-clean solder to avoid washing after soldering is recommended.
