

AGF800-48S28

800 Watts

Full-brick Converter

Total Power: 800 Watts
Input Voltage: 36 to 75 Vdc
of Outputs: Single

Special Features

- Delivering up to 28.6A
- Ultra-high efficiency 94.5% typ. at half load
- Wide input range: 36V ~ 75V
- Excellent thermal performance
- No minimum load requirement
- Fixed frequency operation
- RoHS 6 compliant
- Remote control function
- Remote output sense
- Trim function: 50% ~ 118%
- Input under voltage protection
- Output over current protection
- Output over voltage protection
- Over temperature protection
- Industry standard full-brick pin-out outline
- With aluminum baseplate
- Pin length optional

Safety

IEC/EN/UL 60950
CE Mark
UL/TUV
GB4943
EN55022 Class B

Product Descriptions

The AGF800-48S28-6L is single output DC-DC converter with standard full-brick outline and pin configuration. It delivers up to 28.6A output current with 28V output voltage, Above 94.5% ultra-high efficiency and excellent thermal performance make it an ideal choice to supply power to power amplifier in telecom RF application. Aluminum baseplate structure makes it possible for the module to work under -40 °C ~ +85 °C without air cooling.

Applications

Telecom/ Datacom

Absolute Maximum Ratings

Stress in excess of those listed in the “Absolute Maximum Ratings” may cause permanent damage to the power supply. These are stress ratings only and functional operation of the unit is not implied at these or any other conditions above those given in the operational sections of this TRN. Exposure to any absolute maximum rated condition for extended periods may adversely affect the power supply’s reliability.

Table 1. Absolute Maximum Ratings:

Parameter	Model	Symbol	Min	Typ	Max	Unit
Input Voltage

Safety Certifications

The AGF800-48S28-6L power supply is intended for inclusion in other equipment and the installer must ensure that it is in compliance with all the requirements of the end application. This product is only for inclusion by professional installers within other equipment and must not be operated as a stand alone product.

Table 5. Safety Certifications for AGF800-48S28-6L power supply system

Document	File #	Description
UL 60950		US Requirements
EN60950		European Requirements
IEC60950		International Requirements
GB4943		China
CE		CE Marking

Operating Temperature

The AGF800-48S28-6L power supplies will start and operate within stated specifications at an ambient temperature from -40 °C to 85 °C under all load conditions. The storage temperature is -55 °C to 125 °C.

Thermal Considerations

The converter can operate in an enclosed environment without forced air convection. Cooling of the converter is achieved mainly by conduction from the baseplate to a heatsink. The converter can deliver full output power at 85 °C ambient temperature provided the baseplate temperature is kept below the max values 100 °C.

Figure 12 Temperature test point on baseplate

Table 6. Temperature limit of the test point

Test Point	Temperature Limit
Test point on baseplate	100 °C

Figure 13 Output power derating curve, Tc: temperature test point on baseplate, see Figure 12

Mechanical Shock	3	30g, 6ms, 3axes, 6directions, 3time/direction
Thermal Shock	3	-55°C to 125°C , unit temperature 20cycles
Thermal Cycling	3	-40°C to 85°C , temperature change rate: $1^{\circ}\text{C}/\text{min}$, cycles: 2cycles
Humidity	3	40°C , 85%RH, 48h
Solder Ability	15	IPC J-STD-002C-2007

Application Notes

Typical Application

Below is the typical application of the AGF800-48S28-6L power supply.

Figure 15 Typical application

R1: 20k Ω (1/2W), current limiting resistor

C1: 470 μ F/100V electrolytic capacitor, P/N: UPM2A471MHD (Nichicon) or equivalent caps.

C2, C3: 1 μ F/100V X7R ceramic capacitor, P/N: C3225X7R2A105KT0L0U(TDK) or equivalent caps

C4: 1000 μ F/50V electrolytic capacitor, P/N: UPM1H102MHD (Nichicon) or equivalent caps

External fast-acting fuse with a rating of 35A should be used in the application. The recommended fuse model is NLKP035 from LITTELFUSE.

Sense Characteristics

If the load is far from the unit, connect +S to the terminal of the load to compensate the voltage drop on the transmission line. And -S should be always connected to Vo-. See Figure 15. If the sense compensation function is not necessary, short +S to Vo+ and -S to Vo- respectively.

Remote ON/OFF

A remote ON/OFF control circuit is provided which is isolated from the input side, as well as, the output side. (Isolation withstand voltage: 1.5kVdc).

Connection of remote ON/OFF terminal is as follows. As shown in the figure below, output voltage turns remote ON when current is made to flow through remote ON/OFF terminal. Remote ON/OFF terminal can be controlled by opening or closing connections (with switch or relay).

Maximum source current for remote ON/OFF terminal is 5mA. Therefore, set current limiting resistor value such that this maximum source current value is not exceeded. Also, the allowable maximum reverse current flow is 5mA.

Controlling the remote ON/OFF terminal from the input side

Connect current limiting resistor R1 is shown in the following figure .

Figure 16 Connection of remote ON/OFF control (A)

R1: Recommended resistor value: 20k Ω (1/2W)

Controlling the remote ON/OFF terminal from the output side

Connect the current limiting resistor R1 is shown in the following figure .

Figure 17 Connection of remote ON/OFF control (B)

R1: Recommended resistor value: 2k Ω (1/4W)

Note:

1. When wiring becomes long, connect a capacitor of about 0.1 μ F value between the +remote ON/OFF terminal and – remote ON/OFF terminal at a nearest distance.
2. Current limiting resistor can also be connected to the –remote ON/OFF terminal side.
3. The remote ON/OFF control mode is shown in the following table.

Remote ON/OFF level	Output status
Open (<100uA)	Remote OFF
1.5mA $\leq$ I (ON/OFF) $\leq$ 5mA	Remote ON

Trim Characteristics

The output voltage of the converter can be trimmed using the trim pin provided. Applying a resistor between the trim pin and -S will cause the output to decrease. Applying a resistor between the +V_o and +S will cause the output to increase. Trimming down more than 50% and trimming up more than 18% can cause the module to regulate improperly. If the trim pin is not needed, it should be left open.

Figure 18 Trim circuit

$$R_{up} = 28 \left(\frac{V_o - V_e}{V_e} \right) k\Omega$$

$$R_{down} = -5.97 \left(\frac{V_o}{V_o - V_e} \right) k\Omega$$

V_e is the rated output voltage and V_o is the goal voltage.

For example, to get 30V output, the resistor is:

$$R_{up} = 28 \left(\frac{30 - 28}{28} \right) k\Omega = 2k\Omega$$

For another example, to get 14V output, the resistor is:

$$R_{down} = -5.97 \left(\frac{14}{14 - 28} \right) k\Omega = 5.97k\Omega$$

Take note that when output voltage is increased, input voltage should be limited as shown in the following figure.

Figure 19 Trim-up-able voltage vs. input voltage

Trim Characteristics

The output voltage can also be trimmed by potential applied at the Trim pin. An external resistor is needed between Trim pin and V_{trim} .

Figure 20 Trimmed by V_{trim} circuit

The equation of the trim voltage and output voltage is described as below,

$$V_{trim} = 1 + k\Delta\%$$

$$k = (R_{trim} + 5.97) / 5.97$$

$$\Delta\% = (V_o - V_e) / V_e \times 100\%$$

Where V_{trim} is the potential applied at the Trim pin, and V_o is the desired output voltage, and V_e is 28V, $\Delta\%$ have a range of -50%~118%. The unit for R_{trim} is k Ω .

When $R_{trim}=5.97k\Omega$

$$V_{trim} = V_o / 14 - 1$$

The corresponding relationship between V_{trim} and V_o is shown in Figure 21.

Figure 21 V_{trim} voltage vs. output voltage ($R_{trim}=5.97k$)

Considering the real resistor value, $R_{trim}=5.1k$ is recommend, the equation is shown as below.

$$V_{trim} = 0.067V_o - 0.854$$

The corresponding relationship between V_{trim} and V_o is shown in Figure 22.

Figure 22 V_{trim} voltage vs. output voltage ($R_{trim}=5.1k\Omega$)

AUX

AUX is built in to operate the output side RC. If AUX is not used for RC, AUX can also be used for IOG signal output by opto-coupler. Output voltage value is within 7~10Vdc range, maximum output current is 20mA. Ground for the AUX terminal is -S terminal. AUX can be used for IOG signal output by opto-coupler.

*Note: Avoid short circuit of AUX terminal with other terminals as this would lead to power module damage.

IOG

IOG signal turns 'H' from 'L' within 1s when the output of the module is shut down. The specification of IOG is shown in the following table.

Item	IOG
Function	Normal operation 'L'
	Malfunction 'H'
Base pin	-Sense
Level voltage 'L'	0.5V max at 5mA
Level voltage 'H'	5V typ
Maximum sink current	5mA max
Maximum applicable voltage	35V max

There are two methods to use the IOG. The level from IOG can be used directly to monitor the operation of the module, as shown in Figure 23(A). An external power supply, which is no more than 35V, can also be used for IOG, and a current limiting resistor (R1) must be added to ensure the sink current less than 5mA, as shown in Figure 23(B).

Figure 23 The application of IOG

Input Ripple & Output Ripple & Noise Test Configuration

Figure 24 Input ripple & output ripple & noise test configuration

V_{dc}: DC power supply

L1: 12uH

C_{in}: 220uF/100V typical

C1 ~ C4: See Figure 15

Note - Using a coaxial cable with series 50ohm resistor and 0.68uF ceramic capacitor or a ground ring of probe to test output ripple & noise is recommended.

Weight

The AGF800-48S28-6L weight is 158g.maximum.

Soldering

√(R6 Wave Soldering)

The product is intended for standard manual or wave soldering.

When wave soldering is used, the temperature on pins is specified to maximum 255 °C for maximum 7s.

When soldering by hand, the iron temperature should be maintained at 300 °C ~ 380 °C and applied to the converter pins for less than 10s. Longer exposure can cause internal damage to the converter.

Cleaning of solder joint can be performed with cleaning solvent IPA or similitive.

	Product requirement	Remark	Product Name
R6	Wave soldering	28V	AGF800-48S28-6L

Hazardous Substances Announcement (RoHS of China R6)

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
