

CYPRESS

ASYNCHRONOUS SRAMs WITH ON-CHIP ERROR-CORRECTING CODE (ECC)

PRODUCT OVERVIEW

COMPLETE FREEDOM FROM SOFT-ERRORS

The latest generation Asynchronous SRAMs from Cypress make the best of an advanced process technology by integrating single-bit error correction capability and bit-interleaving techniques to mitigate the effects of soft errors. The result is a family of devices that provide best-in-class features and the highest levels of reliability.

With the performance to serve a wide variety of industrial, communication, data processing, medical, consumer and military applications, Cypress's latest technology Fast and MoBL® SRAM devices are form-fit-function compatible with existing Asynchronous SRAM devices based on older technology nodes. This allows customers to boost system performance and reliability without investing on PCB re-design.

SOFT-ERROR MITIGATION IN ASYNCHRONOUS SRAM

Cypress's latest generation Asynchronous SRAM devices use (38,32) Hamming Code for single-bit error detection and correction. A hardware ECC block performs all ECC-related functions in line, without user intervention and without affecting the access time performance of the device. The single-bit error detection and correction capability is supplemented by a bit-interleaving scheme to prevent the occurrence of multi-bit errors. Together, these features provide significant improvement in Soft Error Rate (SER) performance, resulting in FIT rates less than 0.1 FIT/Mbit.

ENHANCED RELIABILITY WITH ERR PIN

Over a period of time, multiple single event upsets (SEUs) may affect the same word, resulting in an accumulated multi-bit upset (two or more single-bit upsets in the same word). Such an event is highly improbable. But if it does occur, an accumulated multi-bit upset cannot be detected by the ECC logic, and the system may read incorrect data.

To mitigate this problem, Cypress's latest generation Asynchronous SRAM devices include an optional error indication (ERR) pin. During read operation, the ERR pin signals detection and correction of a single-bit error at the accessed memory location. The system can use this information to recognize a single-bit error and write-back corrected data to the memory.

ADVANTAGES

- Highest level of reliability: Soft-Error Rate < 0.1 FIT/Mbit
- Embedded ECC to detect and correct all single-bit errors
- Bit-interleaving to avoid multi-bit upsets
- Optional ERR pin to indicate the occurrence of single-bit error
- Industry leading access time: 10ns (16-Mbit FAST)
- Ultra-low standby current: 16uA (16-Mbit MoBL)
- Multiple configurations: x8, x16, and x32
- Multiple operating voltages: 1.8V, 3V, 5V
- Available in industrial and automotive temperature grades
- Form-fit-function compatible with current generation ASYNC SRAM devices

Internal Block Diagram of ASYNCHRONOUS SRAM with ECC

16-MBIT FAST ASYNCHRONOUS SRAM

Part Number	Organization	Voltage	Speed ⁽²⁾	Package	Temperature Grade
CY7C1069G	2M x 8	1.8V, 3V, 5V	10ns, 12ns, 15ns, 17ns	54-TSOP II, 48-VFBGA	Industrial, Automotive
CY7C1069GE ⁽¹⁾	2M x 8	1.8V, 3V, 5V	10ns, 12ns, 15ns, 17ns	54-TSOP II, 48-VFBGA	Industrial, Automotive
CY7C1061G	1M x 16	1.8V, 3V, 5V	10ns, 12ns, 15ns, 17ns	48-TSOP I, 54-TSOP II, 48-VFBGA	Industrial, Automotive
CY7C1061GE ⁽¹⁾	1M x 16	1.8V, 3V, 5V	10ns, 12ns, 15ns, 17ns	48-TSOP I, 54-TSOP II, 48-VFBGA	Industrial, Automotive
CY7C1062G	512K x 32	1.8V, 3V	10ns, 12ns, 15ns, 17ns	119-BGA	Industrial, Automotive
CY7C1062GE ⁽¹⁾	512K x 32	1.8V, 3V	10ns, 12ns, 15ns, 17ns	119-BGA	Industrial, Automotive

16-MBIT MOBL[®] ASYNCHRONOUS SRAM

Part Number	Organization	Voltage	Speed ⁽⁴⁾	Package	Temperature Grade
CY62167G	1M x 16 ⁽³⁾	1.8V, 3V, 5V	45ns, 55ns	48-TSOP I, 48-VFBGA	Industrial, Automotive
CY62167GE ⁽¹⁾	1M x 16 ⁽³⁾	1.8V, 3V, 5V	45ns, 55ns	48-TSOP I, 48-VFBGA	Industrial, Automotive
CY62168G	2M x 8	1.8V, 3V, 5V	45ns, 55ns	48-VFBGA	Industrial, Automotive
CY62168GE ⁽¹⁾	2M x 8	1.8V, 3V, 5V	45ns, 55ns	48-VFBGA	Industrial, Automotive
CY62162G	512K x 32	1.8V, 3V	45ns, 55ns	119-BGA	Industrial, Automotive
CY62162GE ⁽¹⁾	512K x 32	1.8V, 3V	45ns, 55ns	119-BGA	Industrial, Automotive

Notes: 1. Part with ERR pin

2. Operating speed is 10ns for Industrial Grade 3 V, 5 V part; 15ns for Industrial Grade 1.8 V part; 12ns for Automotive Grade 3 V, 5 V part; and 17ns for Automotive Grade 1.8 V part

3. 48-pin TSOP I configurable as 1Mx16 or as 2Mx8 SRAM

4. Operating speed is 45ns for Industrial Grade and 55ns for Automotive Grade

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
