

PRODUCT SPECIFICATION

COMMERCIAL MICRO-D CONNECTOR SYSTEM

1.0 SCOPE

This Product Specification covers the 1.27 mm (.050 inch) centerline Commercial Micro-D connector series, including both printed circuit board header connector styles and cable connector series, terminable to 26 or 28 AWG shielded cable

2.0 PRODUCT DESCRIPTION

2.1 DIMENSIONS, MATERIALS, PLATINGS AND MARKINGS

PRODUCT NAME AND PART NUMBERS

The following product names and series numbers are covered by this specification:

Headers w/wo jackposts, Size 9	Series 83611
Headers w/wo jackposts, Size 15	Series 83612
Headers w/wo jackposts, Size 25	Series 83614
Dual Stack Headers w/wo jackposts	Series 83619
Shielded Cable Connector, Size 9	Series 83421
Shielded Cable Connector, Size 15	Series 83422
Shielded Cable Connector, Size 25	Series 83424

2.2

Refer to the associated Sales Drawings for additional information on configurations, dimensions, materials, platings and markings.

CONNECTOR CONFIGURATIONS

Connectors and headers are available in a variety of configurations, stamped one-piece pin contacts, and jackpost configurations, which will accept 2-56 or 4-40 threaded jackscrews.

REVISION: Q	ECR/ECN INFORMATION: EC No: IPG2013-0888 DATE: 2012/12/12	TITLE: PRODUCT SPECIFICATION FOR COMMERCIAL MICRO-D CONNECTOR SYSTEM	SHEET No. 1 of 16
DOCUMENT NUMBER: PS-83421-001	CREATED / REVISED BY: A.WILSON	CHECKED BY: A.WILSON	APPROVED BY: F.MALCZYK

PRODUCT SPECIFICATION

2.3 DESIGN FEATURES

MATERIALS AND PLATINGS

Pin Contacts	15µin min gold over 30µin min nickel in mating area and 20µin min matte tin over 50µin min nickel on the solder tail. Base material is a copper alloy.
Socket Contacts	15 or 30 µin min gold over 50µin min nickel. Base material is a copper alloy.
Insulators	Injection molded LCP, UL 94V-0
Shells	150µin nickel over alloy steel.
Backshells	100µin nickel over alloy steel with PVC overmold or Optional rubber boot. Color black

CABLE

Configuration	Max 25 conductors with braided copper shield and with overall jacket.	
Outer diameter	0.225-inch nominal	for Size 9
	0.264-inch nominal	for Size 15
	0.311-inch nominal	for Size 25
Overall jacket	Material optional	
Conductors	28 AWG (7 strands of 36 AWG) 26 AWG (7 strands of 34 AWG)	

2.4 SAFETY AGENCY APPROVAL

The following approvals are applicable to the connectors and cable assemblies covered by this specification:

UL Recognition	UL File Number	E34763
----------------	----------------	--------

REVISION: Q	ECR/ECN INFORMATION: EC No: IPG2013-0888 DATE: 2012/12/12	TITLE: PRODUCT SPECIFICATION FOR COMMERCIAL MICRO-D CONNECTOR SYSTEM	SHEET No. 2 of 16
DOCUMENT NUMBER: PS-83421-001	CREATED / REVISED BY: A.WILSON	CHECKED BY: A.WILSON	APPROVED BY: F.MALCZYK

PRODUCT SPECIFICATION

3.0 APPLICABLE DOCUMENTS AND SPECIFICATIONS

3.1 The connectors and cable assemblies covered by this specification are commercial versions, designed and tested to meet MIL-specification and performance standards and comply with the requirements of the following standards

3.2 MIL-DTL-83513	DETAIL SPECIFICATION—MICRO MINIATURE, RECTANGULAR CONNECTORS
MIL-STD-1344	TEST METHODS FOR ELECTRICAL CONNECTORS
UL 1977	STANDARD FOR SAFETY—COMPONENT CONNECTORS
APPLICATIONS	Used in Data, Signal, Control and Power

4.0 RATINGS

4.1 ELECTRICAL

DIELECTRIC WITHSTANDING VOLTAGE (DWV) (Sea Level)	600 V _{AC} Reference: MIL-DTL-83513 Rev. G Section 3.5.4
OPERATING VOLTAGE:	30 V _{RMS} (42 P _{peak}) Reference: UL 1977 Section 1.2
CURRENT RATING	1A at 25 C 77 F, 0.7A at 70 C, 158 F

4.2 ENVIRONMENTAL

Shock	half sine, 50g, 11ms duration
Vibration resistance	10-500Hz @ 5g accel
Thermal Cycling	-55°C to +125°C
Contact durability	500 cycles minimum
Contact Engagement Force	0.15N to 2.4N (0.5 oz Min to 8.6 oz Max) per contact.
Contact retention	5.0 lb min per Method 2007 of MIL-STD-1344
HUMIDITY @ 95%	21 DAYS PER METHOD 1002 OF MIL-STD-1344

4.3 TEMPERATURE

Operating: -40°C to + 125°C
Nonoperating: -55°C to + 85°C

REVISION: Q	ECR/ECN INFORMATION: EC No: IPG2013-0888 DATE: 2012/12/12	TITLE: PRODUCT SPECIFICATION FOR COMMERCIAL MICRO-D CONNECTOR SYSTEM	SHEET No. 3 of 16

PRODUCT SPECIFICATION

5.0 PERFORMANCE

This paragraph defines the tests to be performed, and the sequence in which they are to be performed. Unless otherwise specified, all tests shall be carried out under standard atmospheric conditions for testing. Unless otherwise defined, mated sets of connector parts shall be tested. Care shall be taken to keep a particular combination of connector pairs together during the complete sequence

Before commencing any testing, all specimens shall be stored for at least 24 hours in the non-inserted state (unmated) under normal atmospheric conditions. The following tests, a mated connector pair is called a specimen. When the Initial Tests have been completed, all specimens shall be divided up according to the test groups noted, in the quantities noted.

5.1

NUMBER OF TEST SPECIMENS

TEST GROUP	TABLE NO.	NO. OF SPECIMEN
INITIAL	I	13
SHOCK & VIB	A	4
MECHANICAL	B	4
HUMIDITY	C	4

TABLE I: TEST GROUP – INITIAL ** This test must be performed before crimping of backshell

PHASE	TEST	TEST CONDITION	MEASUREMENT	REQMT SPEC.	REQUIREMENT
1	Initial Measurement	Unmated Connectors	Visual		No defects that impair normal operation
1a		Unmated Connectors	Dimensional	Product Drawing	No deviations from dimensional tolerances
2		Unmated Connectors	Polarization	Product Drawing	Connectors shall mate in the correct manner
3	**	Unmated Connectors See Fig. 1	Contact Resistance. MIL-STD-1344 METHOD 3002	20mV max @ 100mA (Kelvin 4-wire test)	C.R.=8mΩ max thru p/s interface & socket crimp
4		Unmated Connectors	Insulation Resistance MIL-STD-1344 METHOD 3002	500 ± 15VDC,	I.R. to be >5 x 10 ⁹ Ω
5		Unmated Connectors	Voltage proof (DWV) MIL-STD-1344 METHOD 3001, TEST COND I	630 Vac min	No breakdown, flashover, or leakage >1mohm

PRODUCT SPECIFICATION

6.0 PACKAGING

Each connector or header shall be packaged to protect against damage during handling, transit and storage.

7.0 GAGES AND FIXTURES

7.1 CONTACT RESISTANCE MEASUREMENT

Contact resistance measurements shall be made using the test setup shown in Figure 1, and shall meet the performance requirements noted in Para 5.

FIGURE 1
CONTACT RESISTANCE MEASUREMENT

NOTE: For this test the contact resistance may be measured through the cable, if the bulk resistance of the cable has been accounted for

REVISION: Q	ECR/ECN INFORMATION: EC No: IPG2013-0888 DATE: 2012/12/12	TITLE: PRODUCT SPECIFICATION FOR COMMERCIAL MICRO-D CONNECTOR SYSTEM	SHEET No. 8 of 16

PRODUCT SPECIFICATION

8.0 OTHER INFORMATION

8.1 QUALITY CONFORMANCE INSPECTION

Inspection of product for delivery shall consist of Groups A and B inspections.

8.1.1 Group A Inspection

Group A inspection shall consist of the visual and mechanical inspection specified in the table below.

GROUP A INSPECTION

INSPECTION	REQUIREMENT	INSPECTION LEVEL
Visual examination	Para. 8.1.1.1	100%
Critical examination	Para. 8.1.1.2	100%

8.1.1.1 Visual examination (Group A inspection)

Each product for delivery shall be visually examined for completeness, workmanship and identification requirements. Attention shall be given to correct material, plating and obvious voids, cracks or other blemishes and defects detrimental to the function of the parts.

8.1.1.2 Critical examination (Group A inspection)

Each product for delivery shall be examined for critical (major) attributes per the individual drawing. These critical attributes shall be examined 100% for conformance to the requirements of the drawing.

Insulator subassemblies and backshell subassemblies shall also be examined for conformance to the subassembly drawings to insure the following (in-process inspection is acceptable):

1. Insulator subassembly latches are completely latched and there is no evidence of cracked, bent or broken latches
2. The two insulators are seated flush with no visible gap between their mating surfaces as a result of excessive flash or debris.
3. Backshell subassemblies shall be free to swivel 360 degrees without distortion of the subassembly components.

REVISION: Q	ECR/ECN INFORMATION: EC No: IPG2013-0888 DATE: 2012/12/12	TITLE: PRODUCT SPECIFICATION FOR COMMERCIAL MICRO-D CONNECTOR SYSTEM	SHEET No. 13 of 16
DOCUMENT NUMBER: PS-83421-001	CREATED / REVISED BY: A.WILSON	CHECKED BY: A.WILSON	APPROVED BY: F.MALCZYK

PRODUCT SPECIFICATION

8.1.2 Group B inspection

Group B inspection shall consist of the inspections specified in the table below, in the order shown, and shall be made on samples that have been submitted and have passed the Group A inspection. Cable assembly samples shall be assembled into single or double-ended cable assemblies of sufficient length to perform the tests noted below.

GROUP B INSPECTION

INSPECTION	REQUIREMENT	INSPECTION LEVEL												
Contact resistance	4 contacts per assy. C.R.=35mΩ max. See Fig 1 for measurement points	AQL 1.0 LEVEL II												
Insulation resistance	500±15Vac, 4 contacts per connector.I.R. to be >10 ⁹ Ω	AQL 1.0 LEVEL II												
Dielectric Withstanding Voltage (DWV)	630 Vac min between pins. There shall be no evidence of breakdown or flashover.	AQL 1.0 LEVEL II												
Connector mating and unmating force Measured in oz.	<table><tr><td></td><td>POSITION</td><td></td></tr><tr><td></td><td>9 15 25</td><td></td></tr><tr><td>Max Mating</td><td>165 178 238</td><td></td></tr><tr><td>MinUnmating</td><td>21 24 29</td><td></td></tr></table>		POSITION			9 15 25		Max Mating	165 178 238		MinUnmating	21 24 29		AQL 1.0 LEVEL II
	POSITION													
	9 15 25													
Max Mating	165 178 238													
MinUnmating	21 24 29													
Cable retention	25 lb min, See Para. 5.3 for test setup	AQL 1.0 LEVEL II												

8.2.1.1 Contact resistance (Group B inspection)

Sample connectors from Group A inspection shall be assembled according to sales drawing assembly procedures using 83000-0002 or 83000-0069 contacts. Contacts to be conditioned 3 times using 83000-9001 contact. Contact resistance to be measured using a new not previously mated 83000-9001 contact per MIL-STD-1344, Method 3004 and Figure 1. Backshell sub-assy, boot, crimp ring and jack screws may be omitted. The 83000-9001 contacts used for conditioning are limited to 50 conditioning mates before being replaced.

8.2.1.2 Insulation resistance (Group B inspection)

Insulation resistance shall be measured on samples from Para. 8.2.1.1 according to method 3003 of MIL-STD-1344 on each contact in the connector under test. IR to be measured between closest pair of contacts and closest contact and connector shell.

REVISION: Q	ECR/ECN INFORMATION: EC No: IPG2013-0888 DATE: 2012/12/12	TITLE: PRODUCT SPECIFICATION FOR COMMERCIAL MICRO-D CONNECTOR SYSTEM	SHEET No. 14 of 16
DOCUMENT NUMBER: PS-83421-001	CREATED / REVISED BY: A.WILSON	CHECKED BY: A.WILSON	APPROVED BY: F.MALCZYK

PRODUCT SPECIFICATION

8.2.1.3 Environment Requirements

Solderability	Solder Time: 5 +/-0.5 secs. Solder Temperature: 260+/- 5°C	95% of the immersed area must show no voids, pin holes.
Resistance to Soldering Heat (Through Hole)	Solder tail to be dipped in flux as per MIL-STD-202F method 210 condition B. Solder Temperature: 260 +/- 5°C Solder Time: 10 +/- 1 secs.	No damage in appearance of the connector
Resistance to IR reflow heat (SMT)	Pass product through IR machine for 3 cycles of the following reflow profile: Average Ramp Rate 3°C/sec max. Preheat Temp. (Min.) 150°C Preheat Temp. (Max.) 200°C Preheat Time 60 – 180 sec Ramp to Peak 3°C/sec max. Time over liquids (217°C) 60 – 150 sec Peak Temperature 260 +/-5°C Time within 5°C of peak 20 – 40 sec. Ramp – Cool Down 6°C/sec max. Time 25°C to Peak 8 mins. max.	No damage in appearance of the connector

Reflow Temperature Profile

Note: Please check the mount condition (reflow soldering condition) by own devices before hand, because the condition changes by soldering devices.

REVISION: Q	ECR/ECN INFORMATION: EC No: IPG2013-0888 DATE: 2012/12/12	TITLE: PRODUCT SPECIFICATION FOR COMMERCIAL MICRO-D CONNECTOR SYSTEM	SHEET No. 15 of 16
DOCUMENT NUMBER: PS-83421-001	CREATED / REVISED BY: A.WILSON	CHECKED BY: A.WILSON	APPROVED BY: F.MALCZYK

PRODUCT SPECIFICATION

8.2.1.4 Dielectric Withstanding Voltage (DWV): (Group B inspection)

DWV shall be measured on samples from Para. 8.2.1.2 according to Method 3001 of MIL-STD-1344 on each contact in the connector under test. DWV to be measured between closest pair of contacts and closest contact and connector shell.

8.2.1.5 Connector mating and unmating force (Group B inspection)

Samples from Para 8.2.1.3 shall be assembled with backshell, crimp ring, boot and jackscrews according to sales drawing assembly instructions. Mount connector in pull test fixture as shown in Figure 5 (unmated). At a feed rate of approximately 10mm/sec, mate connector under test with the mating Series 83611, 83612, or 83614 headers as appropriate until fully mated. At the same feed rate, unmate the connector from the header. Monitor mating and unmating forces continuously during mate/unmate cycle.

8.2.1.6 Cable retention (Group B inspection)

Samples from Para 8.2.1.4 shall be mounted as shown in Para 5.2, Phase 8. At a rate of approximately 10 mm/sec pull on the cable to 25 lb. minimum. The cable shall not separate from the connector sufficient to affect the performance of the connector.

9.0 Revision History

- A. See History file
- B. See History file
- C. See History file
- D. Para. 2.2 and 2.4: deleted ref to specific cable and SSA standards, Para 3.0: Added MIL-STD-1344, Para 4.3, Vibration resistance: was "10-32Hz @ .35amp; 32-500Hz @ 5g accel", TABLES I, A, B, C: corrected Requirements for Contact resistance and Voltage proof; TABLE A: changed Vibration test to Cond II, 10-500 Hz 5g accel; GROUP B INSPECTION: changed DWV to 350 Vac and 630Vac.
- E Revised mate/unmate force to 10 oz per contact
- F Updated product specification to include requirements and parameters for 15 and 25 pin configurations
- G Added Safety Agency file number and minor editorial corrections.
- H Release to work manager
- J Added 26 AWG cable
- K Added new P/Ns-Overmold, Revised insulator from LCP to Zenite
- L Revised Format
- M ADD "MATTE" TO CONTACT FINISH
- N Revise mating and Unmating Requirements.
- O Not Used
- P Remove MAX from 5.2 AND 8.1.2.
- P1 Missing data from report. Resubmit ECN
- P2 Update Electrical Specification: 4.1) Dielectric Withstanding Voltage, Operating Voltage
- Q Added 8.2.13 Sheet No. 15 Environment Requirements

REVISION: Q	ECR/ECN INFORMATION: EC No: IPG2013-0888 DATE: 2012/12/12	TITLE: PRODUCT SPECIFICATION FOR COMMERCIAL MICRO-D CONNECTOR SYSTEM	SHEET No. 16 of 16
DOCUMENT NUMBER: PS-83421-001	CREATED / REVISED BY: A.WILSON	CHECKED BY: A.WILSON	APPROVED BY: F.MALCZYK

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
