

NB6L295M

2.5V / 3.3V Dual Channel Programmable Clock/Data Delay with Differential CML Outputs

Multi-Level Inputs w/ Internal Termination

The NB6L295M is a Dual Channel Programmable Delay Chip designed primarily for Clock or Data de-skewing and timing adjustment. The NB6L295M is versatile in that two individual variable delay channels, PD0 and PD1, can be configured in one of two operating modes, a Dual Delay or an Extended Delay.

In the Dual Delay Mode, each channel has a programmable delay section which is designed using a matrix of gates and a chain of multiplexers. There is a fixed minimum delay of 3.2 ns per channel.

The Extended Delay Mode amounts to the additive delay of PD0 plus PD1 and is accomplished with the Serial Data Interface MSEL bit set High. This will internally cascade the output of PD0 into the input of PD1. Therefore, the Extended Delay path starts at the IN0/IN0 inputs, flows through PD0, cascades to the PD1 and outputs through Q1/Q1. There is a fixed minimum delay of 6.0 ns for the Extended Delay Mode.

The required delay is accomplished by programming each delay channel via a 3-pin Serial Data Interface, described in the application section. The digitally selectable delay has an increment resolution of typically 11 ps with a net programmable delay range of either 0 ns to 6 ns per channel in Dual Delay Mode; or from 0 ns to 11.2 ns for the Extended Delay Mode.

The Multi-Level Inputs can be driven directly by differential LVPECL, LVDS or CML logic levels; or by single ended LVPECL, LVCMOS or LVTTTL. A single enable pin is available to control both inputs. The SDI input pins are controlled by LVCMOS or LVTTTL level signals. The NB6L295M 16 mA CML output contains temperature compensation circuitry. This device is offered in a 4 mm x 4 mm 24-pin QFN Pb-free package. The NB6L295M is a member of the ECLinPS MAX™ family of high performance products.

- Input Clock Frequency > 1.5 GHz with 210 mV V_{OUTPP}
- Input Data Rate > 2.5 Gb/s
- Programmable Delay Range: 0 ns to 6 ns per Delay Channel
- Programmable Delay Range: 0 ns to 11.2 ns for Extended Delay Mode
- Total Delay Range: 3.2 ns to 8.5 ns per Delay Channel
- Total Delay Range: 6.2 ns to 16.6 ns in Extended Delay Mode
- Monotonic Delay: 11 ps Increments in 511 Steps
- Linearity ± 20 ps, Maximum
- 100 ps Typical Rise and Fall Times
- 2.4 ps Typical Clock Jitter, RMS
- 20 ps Pk-Pk Typical Data Dependent Jitter
- LVPECL, CML or LVDS Differential Input Compatible
- LVPECL, LVCMOS, LVTTTL Single Ended Input Compatible
- 3-Wire Serial Interface
- Operating Range: $V_{CC} = 2.375$ V to 3.6 V
- CML Output Level; 380 mV Peak-to-Peak, Typical
- Internal 50 Ω Input/Output Termination Provided
- -40°C to 85°C Ambient Operating Temperature
- 24-Pin QFN, 4 mm x 4 mm
- These are Pb-Free Devices*

*For additional information on our Pb-Free strategy and soldering details, please download the ON Semiconductor Soldering and Mounting Techniques Reference Manual, SOLDERRM/D.

Table 1. PIN DESCRIPTION

| Pin | Name | I/O | Description |
|-----|-------------------------|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | VCC | Power Supply | Positive Supply Voltage for the Inputs and Core Logic |
| 2 | $\overline{\text{EN}}$ | LVC MOS/LVTTL Input | Input Enable/ Disable for both PD0 and PD1. LOW for enable, HIGH for disable, Open Pin Default state LOW (37 k Ω Pulldown Resistor). |
| 3 | SLOAD | LVC MOS/LVTTL Input | Serial Load; This pin loads the configuration latches with the contents of the shift register. The latches will be transparent when this signal is HIGH; thus, the data must be stable on the HIGH-to-LOW transition of S_LOAD for proper operation. Open Pin Default state LOW (37 k Ω Pulldown Resistor). |
| 4 | SDIN | LVC MOS/LVTTL Input | Serial Data In; This pin acts as the data input to the serial configuration shift register. Open Pin Default state LOW (37 k Ω Pulldown Resistor). |
| 5 | SCLK | LVC MOS/LVTTL Input | Serial Clock In; This pin serves to clock the serial configuration shift register. Data from SDIN is sampled on the rising edge. Open Pin Default state LOW (37 k Ω Pulldown Resistor). |
| 6 | VCC | Power Supply | Positive Supply Voltage for the Inputs and Core Logic |
| 7 | VT1 | | Internal 50 Ω Termination Pin for IN1. |
| 8 | IN1 | LVPECL, CML, LVDS Input | Noninverted differential input. Note 1. Channel 1. |
| 9 | $\overline{\text{IN1}}$ | LVPECL, CML, LVDS Input | Inverted differential input. Note 1. Channel 1. |
| 10 | $\overline{\text{VT1}}$ | | Internal 50 Ω Termination Pin for $\overline{\text{IN1}}$ |
| 11 | GND | Power Supply | Negative Power Supply |
| 12 | VCC1 | Power Supply | Positive Supply Voltage for the Q1/ $\overline{\text{Q1}}$ outputs, channel PD1 |
| 13 | $\overline{\text{Q1}}$ | CML Output | Inverted Differential Output. Channel 1. Typically terminated with 50 Ω resistor to VCC1 |
| 14 | Q1 | CML Output | Noninverted Differential Output. Channel 1. Typically terminated with 50 Ω resistor to VCC1 |
| 15 | VCC1 | Power Supply | Positive Supply Voltage for the Q1/ $\overline{\text{Q1}}$ outputs, channel PD1 |
| 16 | VCC0 | Power Supply | Positive Supply Voltage for the Q0/ $\overline{\text{Q0}}$ outputs, channel PD0 |
| 17 | $\overline{\text{Q0}}$ | CML Output | Inverted Differential Output. Channel 0. Typically terminated with 50 Ω resistor to VCC0 |
| 18 | Q0 | CML Output | Noninverted Differential Output. Channel 0. Typically terminated with 50 Ω resistor to VCC0 |
| 19 | VCC0 | Power Supply | Positive Supply Voltage for the Q0/ $\overline{\text{Q0}}$ outputs, channel PD0 |
| 20 | GND | Power Supply | Negative Power Supply |
| 21 | $\overline{\text{VT0}}$ | | Internal 50 Ω Termination Pin for $\overline{\text{IN0}}$ |
| 22 | $\overline{\text{IN0}}$ | LVPECL, CML, LVDS Input | Inverted differential input. Note 1. Channel 0. |
| 23 | IN0 | LVPECL, CML, LVDS Input | Noninverted differential input. Note 1. Channel 0. |
| 24 | VT0 | | Internal 50 Ω Termination Pin for IN0 |
| - | EP | Ground | The Exposed Pad (EP) on the QFN-24 package bottom is thermally connected to the die for improved heat transfer out of package. The exposed pad must be attached to a heat-sinking conduit. The pad is electrically connected to GND and must be connected to GND on the PC board. |

1. In the differential configuration when the input termination pin ($\text{VTx}/\overline{\text{VTx}}$) are connected to a common termination voltage or left open, and if no signal is applied on $\text{INx}/\overline{\text{INx}}$ input then the device will be susceptible to self-oscillation.
2. All VCC, VCC0 and VCC1 Pins must be externally connected to the same power supply for proper operation. Both VCC0s are connected to each other and both VCC1s are connected to each other: VCC0 and VCC1 are separate.

NB6L295M

Table 2. ATTRIBUTES

| Characteristics | | Value |
|--------------------------------------------------------|-----------------------------------|----------------------|
| Input Default State Resistors | | 37 kΩ |
| ESD Protection | Human Body Model Machine Model | > 2 kV > 100V |
| Moisture Sensitivity (Note 3) | QFN-24 | Level 1 |
| Flammability Rating | Oxygen Index: 28 to 34 | UL 94 V-0 @ 0.125 in |
| Transistor Count | | 3094 |
| Meets or exceeds JEDEC Spec EIA/JESD78 IC Latchup Test | | |

3. For additional information, see Application Note AND8003/D.

Table 3. MAXIMUM RATINGS

| Symbol | Parameter | Condition 1 | Condition 2 | Rating | Unit |
|----------------------------|-----------------------------------------------------------|--------------------|--------------------------------------|----------------|--------------|
| V_{CC}, V_{CC0}, V_{CC1} | Positive Power Supply | GND = 0 V | | 4.0 | V |
| V_{IO} | Positive Input/Output Voltage | GND = 0 V | $-0.5 \leq V_{IO} \leq V_{CC} + 0.5$ | 4.5 | V |
| V_{INPP} | Differential Input Voltage $ I_{Nx} - \overline{I_{Nx}} $ | | | $V_{CC} - GND$ | V |
| I_{IN} | Input Current Through R_T (50 Ω Resistor) | | | ± 50 | mA |
| I_{OUT} | Output Current Through R_T (50 Ω Resistor) | | | ± 50 | mA |
| T_A | Operating Temperature Range | | | -40 to +85 | °C |
| T_{stg} | Storage Temperature Range | | | -65 to +150 | °C |
| θ_{JA} | Thermal Resistance (Junction-to-Ambient) (Note 4) | 0 lfpm 500 lfpm | QFN-24 QFN-24 | 37 32 | °C/W °C/W |
| θ_{JC} | Thermal Resistance (Junction-to-Case) | (Note 4) | QFN-24 | 11 | °C/W |
| T_{sol} | Wave Solder Pb-Free | | | 265 | °C |

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

4. JEDEC standard multilayer board – 2S2P (2 signal, 2 power) with 8 filled thermal vias under exposed pad.

| R_{TIN} | Internal Input Termination Resistor | 40 | 50 | 60 | Ω |
| R_{TOUT} | Internal Output Termination Resistor | 40 | 50 | 60 | Ω |

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

- CML outputs loaded with $50\ \Omega$ to V_{CC} for proper operation.
- Input and output parameters vary 1:1 with V_{CC} .
- V_{th} , V_{IH} , V_{IL} , and V_{ISE} parameters must be complied with simultaneously. V_{th} is applied to the complementary input when operating in single-ended mode.
- V_{IHD} , V_{ILD} , V_{ID} and V_{CMR} parameters must be complied with simultaneously.
- $V_{CMR}(\text{min})$ varies 1:1 with voltage on GND pin, $V_{CMR}(\text{max})$ varies 1:1 with V_{CC} . The V_{CMR} range is referenced to the most positive side of the differential input signal.

NB6L295M

Serial Data Interface Programming

The NB6L295M is programmed by loading the 11–Bit SHIFT REGISTER using the SCLK, SDATA and SLOAD inputs. The 11 SDATA bits are 1 PSEL bit, 1 MSEL bit and 9 delay value data bits D[8:0]. A separate 11–bit load cycle is required to program the delay data value of each channel, PD0 and PD1. For example, at powerup two load cycles will be needed to initially set PD0 and PD1; Dual Mode Operation as shown in Figures 3 and 4 and Extended Mode Operation as shown in Figures 5 and 6.

DUAL MODE OPERATIONS

Figure 6. PD1 Shift Register

Refer to Table 7, Channel and Mode Select BIT Functions. In a load cycle, the 11–Bit Shift Register least significant bit (clocked in first) is **PSEL** and will determine which channel delay buffer, either PDO (LOW) or PD1 (HIGH), will latch the delay data value D[8:0]. The **MSEL BIT** determines the Delay Mode. When set LOW, the Dual Delay Mode is selected and the device uses both channels independently. A pulse edge entering IN0/ $\overline{IN0}$ is delayed according to the values in PD0 and exits from Q0/ $\overline{Q0}$. An input signal pulse edge entering IN1/ $\overline{IN1}$ is delayed according to the values in PD1 and exits from Q1/ $\overline{Q1}$. When MSEL is set HIGH, the Extended Delay Mode is selected and an input signal pulse edge enters IN0 and $\overline{IN0}$ and flows through PD0 and is extended through PD1 to exit at Q1 and $\overline{Q1}$. The most significant 9–bits, D[8:0] are delay value data for both channels. See Figure 7.

Table 7. CHANNEL AND MODE SELECT BIT FUNCTIONS

| BIT Name | Function |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PSEL | 0 Loads Data to PD0 |
| | 1 Loads Data to PD1 |
| MSEL | 0 Selects Dual Programmable Delay Paths, 3.1 ns to 8.8 ns Delay Range for Each Path |
| | 1 Selects Extended Delay Path from IN0/ $\overline{IN0}$ to Q1/ $\overline{Q1}$, 6.0 ns to 17.2 ns Delay Range; Disables Q0/ $\overline{Q0}$ Outputs, Q0–LOW, $\overline{Q0}$ –HIGH. |
| D[8:0] | Select one of 512 Delay Values |

NB6L295M

Figure 7. Serial Data Interface, Shift Register, Data Latch, Programmable Delay Channels Load Cycle Required for Each Channel

Serial Data Interface Loading

Loading the device through the 3 input Serial Data Interface (SDI) is accomplished by sending data into the SDIN pin by using the SCLK input pin and latching the data with the SLOAD input pin. The 11-bit SHIFT REGISTER shifts once per rising edge of the SCLK input. The serial input SDIN must meet setup and hold timing as specified in the AC Characteristics section of this document for each bit and clock pulse. The SLOAD line loads the value of the shift register on a LOW-to-HIGH edge transition (transparent state) into a data Latch register and latches the data with a subsequent HIGH-to-LOW edge transition. Further changes in SDIN or SCLK are not recognized by the latched register. The internal multiplexer states are set by the PSEL and MSEL bits in the SHIFT register. Figure 6 shows the timing diagram of a typical load sequence. Input EN should be LOW (enabled) prior to SDI programming, then pulled HIGH (disabled) during programming. After programming, the EN should be returned LOW (enabled) for functional delay operation.

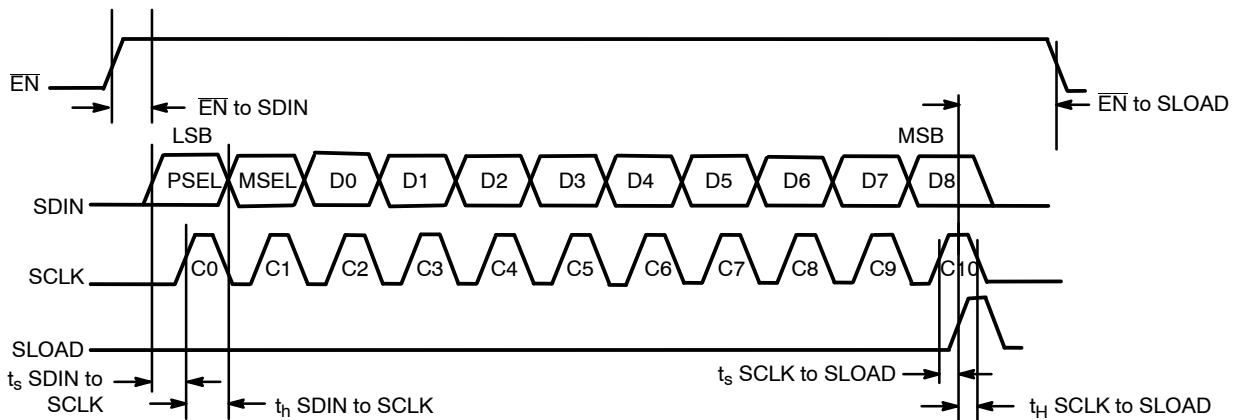

Figure 8. SDI Programming Cycle Timing Diagram (Load Cycle 1 of 2)

NB6L295M

Table 8 shows theoretical values of delay capabilities in both the Dual Delay Mode and in the Extended Delay Modes of operation.

Table 8. EXAMPLES OF THEORETICAL DELAY VALUES FOR PD0 AND PD1 IN DUAL MODE

INPUTS: IN0/ $\overline{IN0}$, IN1/ $\overline{IN1}$, OUTPUTS: Q0/ $\overline{Q0}$, Q1, $\overline{Q1}$

| Dual Mode | | | | PD0 Delay* (ps) | PD1 Delay* (ps) |
|------------|-----------|-------------|-----------|-----------------|-----------------|
| PD1 D[8:0] | (Decimal) | PD0 D[8:0] | (Decimal) | | |

ORDERING INFORMATION

| Device | Package | Shipping [†] |
|---------------|------------------|-----------------------|
| NB6L295MMNG | QFN-24 (Pb-free) | 92 Units / Rail |
| NB6L295MMNTXG | QFN-24 (Pb-free) | 3000 / Tape & Reel |

[†]For information on tape and reel specifications, including part orientation and tape sizes, please refer to our Tape and Reel Packaging Specifications Brochure, BRD8011/D.

NB6L295M

PACKAGE DIMENSIONS

QFN24, 4x4, 0.5P
 MN SUFFIX
 CASE 485L-01
 ISSUE A

NOTES:

1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
2. CONTROLLING DIMENSION: MILLIMETERS.
3. DIMENSION b APPLIES TO PLATED TERMINAL AND IS MEASURED BETWEEN 0.25 AND 0.30 MM FROM TERMINAL.
4. COPLANARITY APPLIES TO THE EXPOSED PAD AS WELL AS THE TERMINALS.

| DIM | MILLIMETERS | |
|-----|-------------|------|
| | MIN | MAX |
| A | 0.80 | 1.00 |
| A1 | 0.00 | 0.05 |
| A2 | 0.60 | 0.80 |
| A3 | 0.20 | REF |
| b | 0.20 | 0.30 |
| D | 4.00 | BSC |
| D2 | 2.70 | 2.90 |
| E | 4.00 | BSC |
| E2 | 2.70 | 2.90 |
| e | 0.50 | BSC |
| L | 0.30 | 0.50 |

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
