

SUMICON 1600 SERIES RECTANGULAR CONNECTORS

The SUMICON 1600 series are multi-contact connectors designed by Hirose. 8, 12, 16, 20, 24, 28, 34, 45 and 60-contact models available (same as the 1300 series). The connector units are available in three types: soldering, wrapping, and crimping. Accessories

are C case, CA case, CBA case, ST stopper, STA stopper, and STB stopper, By combining the many options noted above, the SUMICON 1600 series connectors meet a wide variety applications.

Standard Type

General

In the SUMICON 1600 series, the connector unit is completely separated from the accessories such as the cases and stoppers to diversify the specifaions and

facilitate wiring connection. The SUMICON 1600 series are specified in the NTT specifications No.1931.

Electrical Characteristics

Item	Standard
Contact Resistance	7mΩ max. at DC 1A
Insulation Resistance	1000MΩ min. at DC 500V
Withstand Voltage	AC 1000V for 1 minute
Current Rating	3A
Voltage Rating	300V AC

Material and Finish

Part	Material	Finish
Insulator	Glass filled diallyphthalate resin	Blue
Male Terminal	Brass	Type A: Silver-plated Type G: Gold-plated
Female Terminal	Phosphor bronze	
Plug Case	ABS resin (black)	NTT spec: ABS resin, 2.5PB 6.0/2.0 (color)
Stopper Bracket	Steel	Nickel plating

Wire Wrapping Specifications

Applicable wire	AWG	26	28	30
	Applicable wire (mm)	0.41	0.32	0.26
	Max. coating O.D. (mm)	0.95	0.75	0.6
Wrapping method		Ordinary wrapping	Coating one wrap	Coating one wrap
Effective number of wrappings		about 8	about 8	about 9
Number of wrappings per terminal		2 wrap		

Ordering Information

P **W** — **16** **34** **□** **A** — **C** **□** **()**
(1) (2) (3) (4) (5) (6) (7) (8) (9)

- (1) Shape of terminal opening
P: Male terminal
S: Female terminal
- (2) Terminal connection method
No sign: Soldering
W: Wrapping C: Crimp
- (3) Series No.
16: 1600 series
- (4) Number of contacts 34: 34 contacts
- (5) Serial sign for connctor units
Provided with a sequence of upper-case alphabetic characters.
No sign or sign other than W: Soldering
Sequence: No sign, B, C, D, E ...
- (6) Plating
A: Silver-plated
G: Gold-plated
- (7) Signs for accessories

- C: Plug case
ST: Stopper bracket with horizontal cable inlet opening
J: Jack Case
H: Handle
DB: Deep bracket
- (8) Serial signs for accessories
Each accessory (C, ST, J, H, DB) is provided with sequence of upper-case, alphabetic characters.
Sequence: No sign, A, B, C...
Accessories, C, ST, or J followed by ~~no sign~~ : Side lock types
Accessories, C and ST followed By A: Top touch lock type
Note: The space for no sign is filled sequentially.
- (9) Special specification, () is filled with a serial number, except for the case and bracket, for which the following apply.
(51): Bracket only
(50): Case only

SHOULDER-TOUCH LOCK TYPE

General

The shoulder-touch lock type plug cases are highly reliable, lightweight, sturdy, and operable. 8, 12, and 16-contact models are available. Hirose high-density packaging plug cases, including the top-touch lock type, are available in 8 to 60-contact models.

Material and Finish

Description	Material	Finish
Plug case	Polypropylene resin	Black
Stopper	Steel	Nickel plating

Plug Case

1616-CBA (50)

1600 SUMICON CRIMP TYPE CONNECTORS

General

The SUMICON 1600 series are high-performance compact crimp type connectors developed for labor saving in connection work. 8, 12, 16, 20, 24, 34, 45 and 60-contact models are available. All models are compatible with our previous top-lock type plug cases. For using the connectors separately, easy-to-mount plastic locks are available to expand their functions.

Ordering Information

Item	Standard			
Contact Resistance	7mΩ or less at DC 1A (contact only)			
Insulation Resistance	5,000MΩ or more at DC 500V			
Withstand Voltage	AC 1,000V for 1minute			
Rating Current	3A			
Applicable Cable	AWG # 24-28 (Coating O.D. 1.6φ-0.9φ)			
Crimping strength (Unit: kg or more)	Cable	AWG # 24	AWG # 26	AWG # 28
	Crimping force	3.6	2.4	1.6

Part	Material	Finish
Insulator	Glass-containing polycarbonate resin UL94V-0	Blue
Male Terminal	Brass	Gold-plated Silver-Plated
Female Terminal	Phosphor bronze	Gold-plated Silver-Plated

Features

1. Since this is a press-fit type connector, anyone can perform wiring securely with high reliability.
2. For contact, a two-point contact system is employed for outstanding reliability. It also offers superior mechanical strength.
3. The Sumicon 1600 Series Press-Fit Type Connectors are interchangeable with the conventional solder, DIP and lapping type connectors. They are applicable, therefore, to a wider range of applications.
4. To use connector unit separately, jointly employing an easily installable plastic lock will prevent vibrations and/or cable dead weight from unplugging the connector. The plastic lock, moreover, can be used with either center-suspension or panel-mount system.
5. All wiring spliced with the connector is hidden completely inside the housing, allowing for perfect insulation.

● Housing

● Contact

Using the Connectors

- (1) Take care when removing the connectors to pull out by the housing and not tug on the wires.
- (2) The male terminals of the connectors will be bent if the connectors are twisted when being removed. Take care to pull the characters out straight.
- (3) The plastic locks are sufficiently strong to ensure that the connector engagement will not be loosened by vibration or the weight of the wires. Their strength is not sufficient for other loads. When strength for some other load is required, use the top-touch lock type plug case (common for both solder and wrapping types).
- (4) Both gold-plated and silver-plated terminals are available. Use the gold-plated type in adverse environments. In other environments, we recommend the economical silver-plated type.
- (5) For crimping, use a manual crimping device for low-volume crimping and maintenance. For high-volume crimping, we recommend the automatic crimping machine shown on page 124.
- (6) For plug-in uses, we recommend Sumicon 1600 series solder or wrapping types for improved functionality.

Assembling Procedure

Procedure for Contact Extraction

In case of extracting a contact from the housing due to insertion error or circuit change, follow the steps as shown below.

- 1 Hold the Contact Extractor as shown in Fig. 1, placing the tip of the Extractor on the tip of a contact, then insert it between the contact and the housing.
- 2 When the tip of the Extractor comes into contact with a stepped part in the housing, the spring will come off from the stepped part with a snap which can be felt. Then, extract the contact by pulling the wire.

(Caution: Pushing the tip of the extractor forcibly before the spring has come off from the stepped part may damage the contact).

3. Above Fig. 1 and Fig. 2 show how to extract a contact from socket housing. The same procedure can be employed to extract a contact from pin housing.

Use of Connectors with Respect to Polarity (to prevent mis-insertion of connectors)

Polarization of SUMICON 1600 series can be achieved by contact arrangement. The crimp type contacts are designed to float a little, so that the use of a Polarizing

Key is recommended in order to ensure positive polarization.

In Case of 8, 12 and 16 contact

1. When crimp types are used in both the male and female, do not fill all cavities with contacts. Use Polarizing Key at minimum 2 cavities of Socket housing as shown below and do not fill pin contacts at the corresponding cavities of male housing.
2. When male crimp type is used in combination with solder or wire wrap female type, the connector coupling shall be done carefully not to couple in reverse position. Coupling shall be made by matching of triangle marks on connector inserts.

In case of Multi Pin Type more than 20 contact

1. SUMICON 1600 series are naturally polarized in all cavities filled with contacts. When all cavities are not filled, Polarizing Keys shall be inserted in vacant cavities to the minimum for preventing reverse coupling. But when Top Touch Lock Plug Shell is used, Polarizing Keys are not necessary
2. When male crimp type is used with some vacant cavities in combination with solder or wire wrap female type, Top Touch Lock Plug Shell is recommended.

The product information in this catalog is for reference only. Please request the Engineering Drawing for the most current and accurate design information.
All non-RoHS products have been discontinued, or will be discontinued soon. Please check the products status on the Hirose website RoHS search at www.hirose-connectors.com, or contact your Hirose sales representative.

SUMICON 1600 SERIES DIP SOLDERING CONNECTORS

General

The SUMICON 1600 series are original Hirose rectangular dip soldering connectors 8, 12, 16, 20, 24, 34, 45 and 60-contact models are available. All models are compatible with the previous 1600 series in mounting and accessories.

Features

1. Allows straight dip soldering onto a PCB, and is effective in PCB-to-PCB and PCB-to-cable connection.
2. Suitable for use in interface, being compact and lightweight and meeting high-density packaging requirements.
3. Further cuts interconnection costs when simple locks are used.
4. A wide variety of combinations of connection methods available, e.g., dip soldering, wrapping, and crimping, to meet your requirements.

Main Applications

Computers, peripherals and terminals, data communications equipment, measuring instruments, signal equipment, mobile radio equipment, copier, and FAX machine.

Dip Spacer

HRS No.	Part No.	Application
CL216-0419-9	D-1600-SPA	Connector unit packing (applicable for models with any number of contacts)
CL216-0420-8	D-1600-SPB	For packing with Connector unit stopper (applicable for models with any number of contacts)

Mounting screws must be supplied by the customer

Note 1: The connector unit packaging spacer (SPA) cannot be used for packing with the connector unit stopper bracket.
The packaging spacer with connector unit stopper bracket (SPB) cannot be used for packaging the connector unit.
Note 2: Provide two spacers (SPA and SPB) for each connector unit.
* The dimensions marked with an asterisk (*) are for PCBs of 1.6mm in thickness.

How to use connectors

1. When disconnecting, pull it as straight as possible, because the male pins might be damaged if it is twisted.
2. Connectors are available with gold to be used in adverse environmental conditions and silver-plated pins be used in ordinary conditions.

Recommended Dip Soldering Pattern of Connector

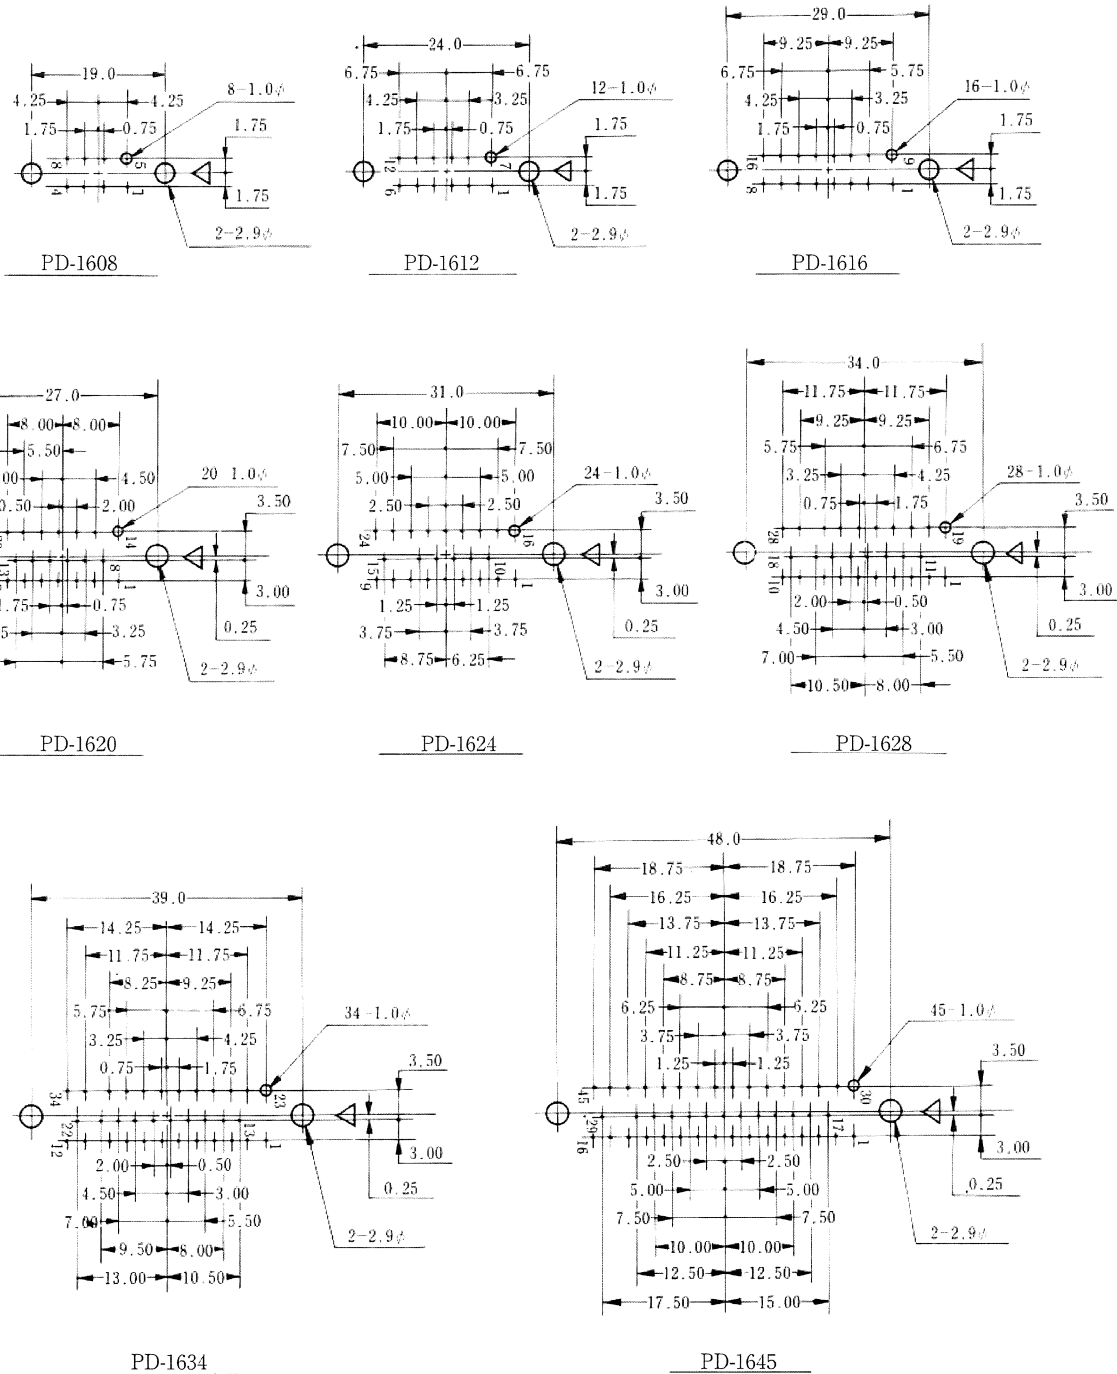

(mm)

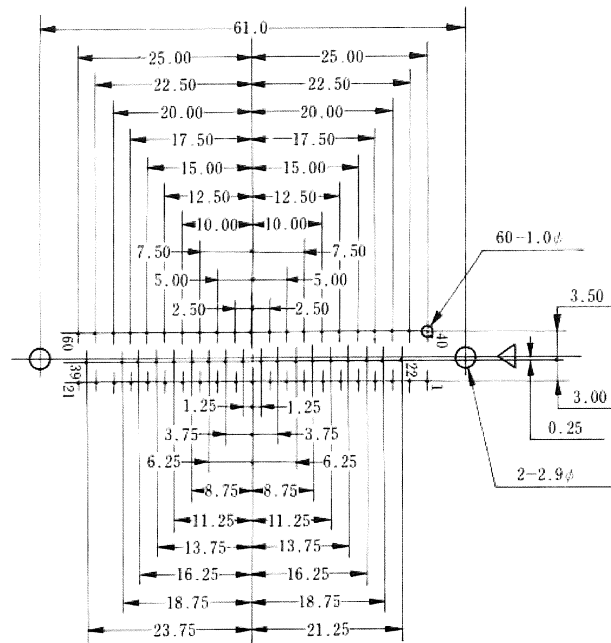

When dip soldering the connectors to a PCB, drill holes as shown below. The figures indicate the number of contacts.

Signs \triangle indicate the V-shaped mark (direction of the

connector unit) on the mating face of the connector unit.

SUMICON 1600 SERIES RIGHT-ANGLE DIP SOLDERING CONNECTORS (MALE)

General

The SUMICON 1600 series are Hirose right-angle dip soldering connectors (male). All models are compatible with the existing soldering

type, wrapping type, crimping type, and straight dip soldering type connectors including their accessories. 20, 28, 34 and 60-contact models are available.

Features

1. Direct dip soldering on a PCB enables convenient parallel connection with cable plugs.
2. Suitable as an interface, being lightweight and capable of high-density packaging.
3. Further cuts interconnection costs by using crimping type plugs with plastic locks for simple cable connection, so no cases are needed.
4. A wide variety of connection methods available, e.g., dip soldering, wrapping, and crimping, to meet your requirements.
5. Available with or without a top-touch lock type bracket and side-lock type bracket, offering you many choices for your applications.
6. Highly solvent-resistant, using insulating materials with high heat resistance and chemical-resistance.

Main Applications

Electronic equipment such as computers, peripherals and terminals, control equipment, and measuring instruments.

How to Use (Example)

How to Use Right Angle Dip Soldering Connectors

Unit: mm

1. The standard use of this to mount it on the left side of a vertical PC board. (Fig. 1)

Fig. 1

2. It is possible to mount it on the right side of PCB but special caution is necessary to be opposite all pin locations on dip soldering surface. (Fig. 2)

Unit: mm

Fig. 2

3. When Top Touch Lock Type Plug Shell and Stopper Bracket are used with mounts on the right side of a PCB, not only the pin locations become opposite, but also the Lock Release Button and Cable Exit are

upside down.
So, the Reverse Mount Stopper Bracket is convenient in such case. (Fig. 3)

Fig. 3

4. M2.6 screws are recommended to mount Right Angle Dip Soldering Pin Connectors.
5. Please choose PC board thinner than 2.4mm.
6. In extracting plug connector, please pull it up straight out to prevent male pin from bending.
7. The standard plating is silver but gold is also an available option.
8. Note: The dip soldering pattern on PCB of Right Angle Type and Straight Type are different from each other.
9. Before using a solvent other than trichloroethylene, chlorosene, methanol, isopropanol, or ethylalcohol to wash soldered connectors, contact out engineering department.

Note 1. The triangle mark represents the position of the same mark on the connector unit.

2. Above pattern is shown view direction of the connector mounting side.

Recommended Mounting Pattern

Unit: mm

For insertion-soldering in the PCB, drill mounting holes as shown in the figure below.

With top-touch-lock type stopper bracket

With side-lock type stopper bracket

Connector Unit Type

No. of pin	A
20	27
28	34
34	39
60	61

The triangle mark represents the position of the same mark on the connector unit.
Above pattern is shown from view direction of the connector mounting side.

Function Chart 2

*Dust cap is available for STA stopper bracket.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
