

# Si886xxISO-EVB USER'S GUIDE

## Description

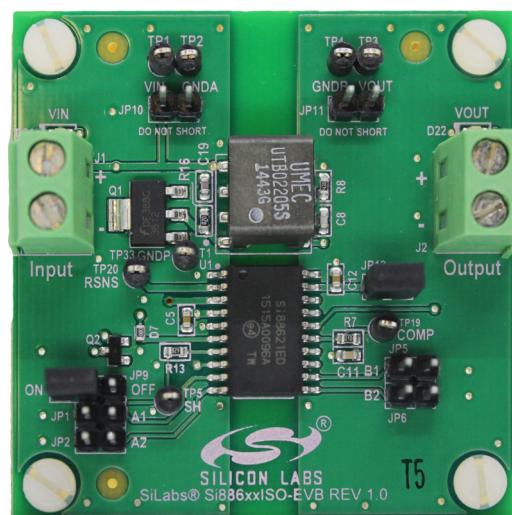

This document describes the operation of the Si886xxISO-EVB.

## Kit Contents

The Si886xxISO Evaluation Kit contains the following items:

- Si886xxISO-EVB
- Si88621ED-IS installed on the evaluation board.

## Si886xxISO-EVB Overview

## 1. Hardware Overview and Setup

The default configuration of the Si886xxISO-EVB demonstrates the digital isolation capabilities of the installed Si88621ED-IS as well as its dc-dc converter performance. In this configuration, the dc-dc converter is enabled, the primary side digital supply is sourced by an external regulator circuit, and the secondary side digital supply is sourced by the output of the converter. This EVB configuration has a jumper installed at JP9 in the ON position, JP13 has a jumper installed, and the remaining jumpers not populated.

**Note:** Do not place jumpers across JP10 or JP11. These are additional test points for VDDA, GNDA and GNDB, and VOUT respectively.

### 1.1. DC-DC Converter Input and Output

Supply power to the EVB by applying 24 Vdc to VIN at terminal block J1. LED D21 above terminal block J1 illuminates to show power applied to primary side of the converter.

The isolated dc-dc output, VOUT, is available at terminal block J2. The populated values for R5 and R6 produce a 5 V output at VOUT capable of sourcing up to 5 W to an external load connected to terminal block J2. LED D22 above the terminal block J2 illuminates when the dc-dc converter is operating.

VIN and VOUT test points are available along the upper edge of the EVB.

### 1.2. Digital Isolator Supplies

The A-side power is provided by a regulator circuit referenced to VREGA pin of the Si88621ED-IS. VIN is stepped down from 24 V to approximately 4.3 V and applied to VDDA pin.

The B-side power is supplied by the output of the dc-dc converter through JP13.

### 1.3. Digital Signals

The EVB has a series of header pins for connecting to each digital channel. The inside conductor of each 2x1 header is connected to the device pin and the outer conductor is tied to ground through a resistor of 499 Ω. Connect digital signals to each side of the Si886xxISO-EVB through a two-row ribbon cable with one row grounded.

- Channel 1 transmits from A1 (JP1 pin 2) to B1 (JP4 pin 1).
- Channel 2 transmits from B2 (JP5 pin 1) to A2 (JP2 pin 2).

**Note:** The digital input signal should not exceed the power supply of the respective side.

### 1.4. Transformer Current Sensing

Primary side magnetizing current across the sense resistor R12, can be observed by probing TP20, RSNS with reference to TP33, GNPD.

## 2. Alternative Configurations

### 2.1. Disabling the DC-DC Converter

The SH\_FC input (U1 pin 7) disables the dc-dc converter. JP9 controls the SH\_FC input, enabling the converter when pulled low, ON, and disabling the converter when pulled high, OFF. To disable the dc-dc converter, place the jumper in the OFF position on JP9.

If interfacing to an external controller through the JP9 header, the controller must drive SH low for normal operation and high to disable the dc-dc.

**Note:** When the dc-dc converter is disabled, the B-side can be powered by an active high digital input on the B-side. Ensure B2 input is tri-state or driven low when VDDB is left floating or grounded.

### 2.2. 3.3 V DC-DC Converter Output

To change VOUT to 3.3 V, change R5 to 43.2 kΩ and R6 to 20.0 kΩ.

### 2.3. Alternate Supply for VDDA

To bypass the regulator circuit and supply VDDA from a separate supply, remove Q2 and connect positive power supply through JP9 pin 3 and connect the supply return to J1 pin 2.

### 2.4. Alternate Supply for VDDB

To supply VDDB from a separate supply, remove the jumper on JP13 and supply desired power through JP13 pin 2 and connect the supply return to J2 pin 1.

## 3. Quick Reference Tables

**Table 1. Test Point Descriptions**

Test Point	Description	Referenced to
TP1	VIN	GNDA/GNDP
TP2	GNDA/GNDP	N/A
TP3	VOUT	GNDB
TP4	GNDB	N/A
TP5	SHDN	GNDA/GNDP
TP19	COMP	GNDB
TP20	RSNS	GNDA/GNDP
TP33	GNDP	N/A

**Table 2. Jumper Descriptions**

Jumper	PIN 1*	PIN 2*	PIN 3*	Default Position	Description
JP1	GNDA (through 499 Ω)	A1	—	Not Installed	Digital Isolator Connector
JP2	GNDA (through 499 Ω)	A2	—	Not Installed	Digital Isolator Connector
JP5	B1	GNDB (through 499 Ω)	—	Not Installed	Digital Isolator Connector
JP6	B2	GNDB (through 499 Ω)	—	Not Installed	Digital Isolator Connector
JP9	GNDA	SHDN	VDDA	Installed (SHDN - GNDA)	DC-DC Converter Enabled
JP10	VIN	GNDA	—	Not Installed	<b>DO NOT SHORT – test points only</b>
JP11	GNDB	VOUT	—	Not Installed	<b>DO NOT SHORT – test points only</b>
JP13	VDDB	VOUT	—	Installed	Connects VDDB to VOUT

\*Note: Pin numbering is from left to right.

## 4. Si886xxISO-EVB Schematics

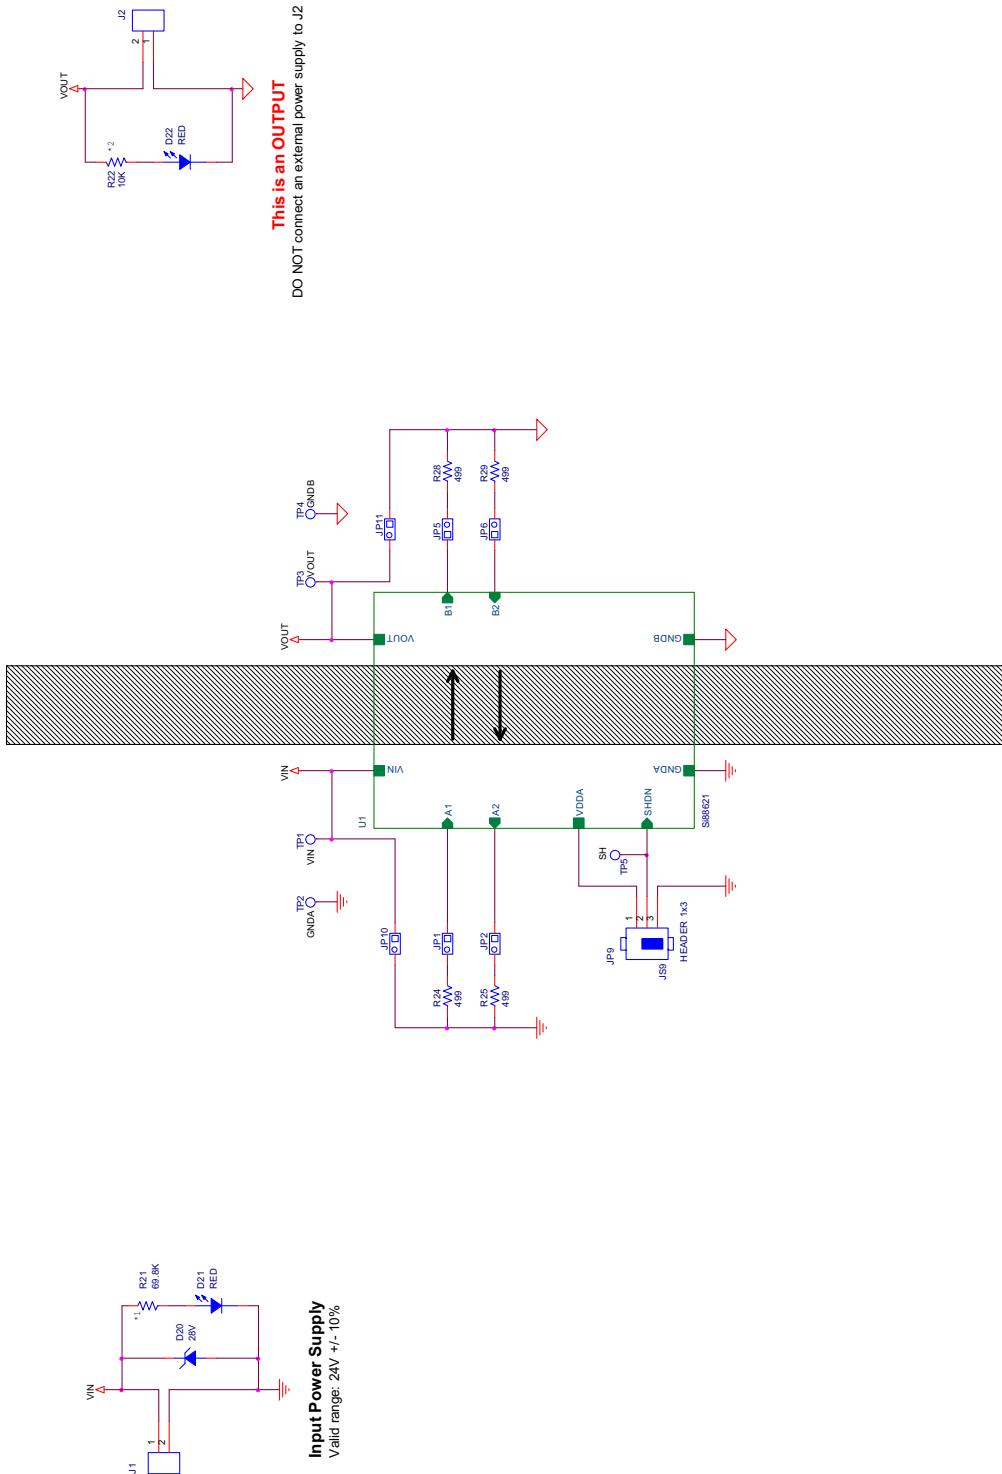

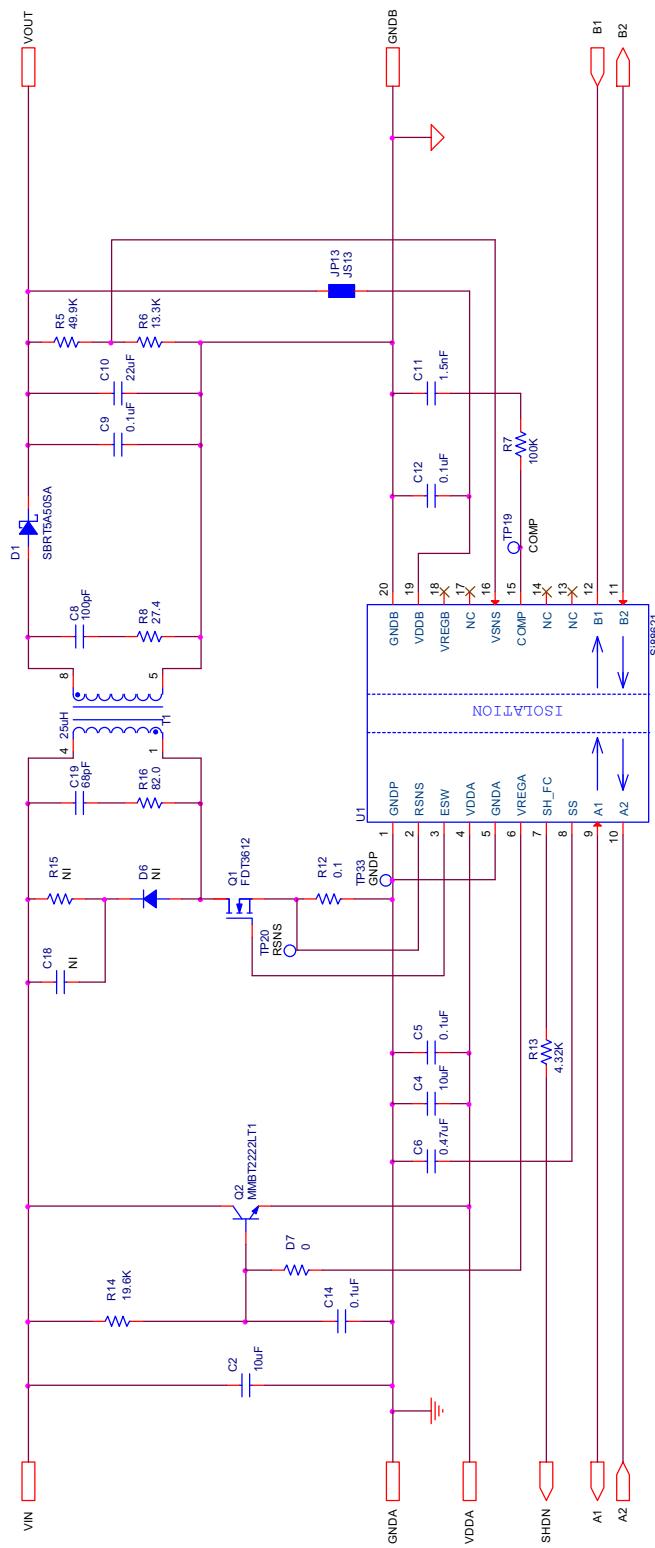

Figure 1. Si886xxISO-EVB Schematic (1 of 2)

**Default EVB Converter Configuration:**  
**VIN = 24V +/- 10%**  
**VOUT = 5V**

For VOUT of 3.3V, change R5 to 43.2k and R6 to 20.0k

ООО "ЛайфЭлектроникс"

"LifeElectronics" LLC

ИНН 7805602321 КПП 780501001 Р/С 40702810122510004610 ФАКБ "АБСОЛЮТ БАНК" (ЗАО) в г.Санкт-Петербурге К/С 30101810900000000703 БИК 044030703

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибуторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибуторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помочь разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
