The CPLL58 is a complete PLL/Synthesizer needing only an external frequency reference and supply voltages for the internal PLL (phase lock loop) and VCO (voltage controlled oscillator). The Crystek CPLL58 is programmed using a standard three line interface (Data, Clock and Load Enable).

The CPLL58 family has been initially released to cover 1GHz to 5GHz in bands. It is housed in a compact 0.582-in. × 0.8-in. × 0.15-in. SMD package which saves board space. Typical phase noise at 4GHz is -90dBc/Hz at 10KHz offset with 0dBm minimum output power.

Programming Guide for CPLL58-XXXX

Introduction

The CPLL58 uses a simple 3 wire interface to program four internal registers. See Figure 1.

Figure 1. Timing Diagram

There are four 24 bit registers that need to be programmed. Which register is written into is simply controlled by Control Bits C1 and C2. Table I summarizes the Truth Table for Control Bits C1 and C2.

| Control Bits | | Data Latch |
|--------------|----|--------------------------------------|
| C2 | C1 | |
| 0 | 0 | R Counter |
| 0 | 1 | N Counter (A and B) |
| 1 | 0 | Function Latch (Including Prescaler) |
| 1 | 1 | Initialization Latch |

Table II. Latch Summary

When using the CPLL58 family in a synthesizer application, all four 24 bit registers need to be written into after power-up. After writing all four latches the first time, subsequent frequency step changes can be accomplished by changing the N Counter Latch only.

Specifications subject to change without notice.

Programming Crystek p/n: CPLL58-4160-4380

The following is specific programming for CPLL58-4160-4380 (4.160GHz-4.380GHz with 2500KHz Step Size and 10MHz input reference frequency).

Program all four registers with the following:

R Counter Latch: 000010 H
N Counter Latch: 003401 H
Function Latch: 9F8083 H

The above values will set the CPLL58-4160-4380 to 4.160GHz
