ENGINEERED SOLUTIONS. DESIGNED TO FIT.

Amphenol micro connectors provide small inter-connect solutions, which will exceed the requirements of the US military standard M83513. What differentiates Amphenol from the competition is our overall connector design. Custom solutions can easily be engineered to ensure exact performance in any application.

Amphenol is not limited to the traditional M83513 rectangular connectors but has also developed and produced circular connectors, strip line connectors, PC board connectors, and hybrid connectors utilizing power, signal, coaxial and fiber optics contacts.

SPECIFICATIONS

The Amphenol microminiature connector series offers proven military spec performance and reliability in rectangular and strip line micro connectors. Microminiature connectors are available in rectangular D, strip and custom card edge configurations, with contacts on .050 (1.27) centres. Inserts in micro-d miniature connectors with signal and coax/power contacts are also available.

The Amphenol microminiature contact system employs a precision stamped and formed pin contact recessed within the plug insulator. The socket contact is a precision fabricated tube. Pin and socket contacts are epoxy retained in high grade thermoplastic insulators.

The contact system has proven reliability, exceeding the performance specifications of MIL-DTL-83513.

Terminations are available in a broad range including solder cup, terminated to wire harness, vertical and right angle PCB. Plastic and metal shell versions are available, in a broad range of shell finishes. A broad range of mounting hardware is available (jackscrews, posts, guide pins) as well as straight and angled back-shells.

Amphenol 164F SERIES

MIL-C-55116 Filtered Audio Connectors

Amphenol's 164F series is a line of filtered MIL-C-55116 & MIL-C-55116A connectors for use in communications and related applications. Designed specifically for non-coax, vehicle-mounted applications, the 164F series offers communication security and EECM capabilities. Two connector lengths are offered for maximum flexibility in new or existing product applications. The standard version is designed to provide a low inductance path for mixed audio signals. The in-line version offers space savings, allowing easier design into smaller audio systems of high-powered equipment. Low-loss performance is achieved by Amphenol's three isolation design results in a shorter, lighter connector with superior thermal and physical shock capabilities. Both 5.5 & 3 pin versions are available with either solder cup or P.C.B. terminations.
