6 Tested successfully: Use under extreme ambient conditions

The terminal has been tested successfully over 250 temperature change cycles in accordance with IEC 61131-2 in the range from -40°C to +70°C.

The following conditions were observed:

- The Inline devices for all connecting cables were connected with a minimum conductor cross section of 0.5 mm²
- The Inline station was assembled on a wall-mounted horizontal DIN rail
- Fans were used to ensure continuous movement of air in the control cabinet
- The Inline station was not exposed to vibration or shock
- The Inline station was operated with a maximum of 24.5 V (ensured by using regulated power supply units)

10 Connection notes and examples

NOTE: Malfunction

Make sure that the supply voltage U_S is available, as it is used internally as the auxiliary voltage.

When connecting the sensors observe the assignment of the terminal points to the process data.

NOTE: Malfunction

The sensors and U_S must be supplied from the same voltage supply.

If you connect the sensors via external busbars, make sure that the sensors and U_S are supplied by the same power supply.
