

Features

- Zero input-output propagation delay, adjustable by capacitive load on FBK input
- Multiple configurations, see [Available CY2308 Configurations on page 4](#) for more details
- Multiple low skew outputs
- Two banks of four outputs, three-stateable by two select inputs
- 10 MHz to 133 MHz operating range
- 75 ps typical cycle-to-cycle jitter (15 pF, 66 MHz)
- Space saving 16-pin 150 mil SOIC package or 16-pin TSSOP
- 3.3 V operation
- Industrial temperature available

Functional Description

The CY2308 is a 3.3 V Zero Delay Buffer designed to distribute high speed clocks in PC, workstation, datacom, telecom, and other high performance applications.

The part has an on-chip PLL that locks to an input clock presented on the REF pin. The PLL feedback is driven from external FBK pin, so user has flexibility to choose any one of the outputs as feedback input and connect it to FBK pin. The input-to-output skew is less than 250 ps and output-to-output skew is less than 200 ps.

The CY2308 has two banks of four outputs each that is controlled by the select inputs as shown in the table [Select Input Decoding on page 3](#). If all output clocks are not required, Bank B is three-stated. The input clock is directly applied to the output for chip and system testing purposes by the select inputs.

The CY2308 PLL enters a power down state when there are no rising edges on the REF input. In this mode, all outputs are three-stated and the PLL is turned off resulting in less than 25 μ A of current draw. The PLL shuts down in two additional cases as shown in the table [Select Input Decoding on page 3](#).

Multiple CY2308 devices accept the same input clock and distribute it in a system. In this case, the skew between the outputs of two devices is less than 700 ps.

The CY2308 is available in five different configurations as shown in the table [Available CY2308 Configurations on page 4](#).

- The CY2308-1 is the base part where the output frequencies equal the reference if there is no counter in the feedback path. The CY2308-1H is the high drive version of the -1 and rise and fall times on this device are much faster.
- The CY2308-2 enables the user to obtain 2x and 1x frequencies on each output bank. The exact configuration and output frequencies depend on the user's selection of output that drives the feedback pin.
- The CY2308-3 enables the user to obtain 4x and 2x frequencies on the outputs.
- The CY2308-4 enables the user to obtain 2x clocks on all outputs. Thus, the part is extremely versatile and is used in a variety of applications.
- The CY2308-5H is a high drive version with REF/2 on both banks.

Zero Delay and Skew Control

Figure 2. REF. Input to CLKA/CLKB Delay Versus Difference in Loading between FBK Pin and CLKA/CLKB Pins

To close the feedback loop of the CY2308, the user has to connect any one of the eight available output pins to FBK pin. The output driving the FBK pin drives a total load of 7 pF plus any additional load that it drives. The relative loading of this output to the remaining outputs adjusts the input-output delay as shown in the [Figure 2](#).

For applications requiring zero input-output delay, all outputs including the one providing feedback is equally loaded.

If input-output delay adjustments are required, use the [Zero Delay and Skew Control](#) graph to calculate loading differences between the feedback output and remaining outputs.

For zero output-output skew, outputs are loaded equally. For further information on using CY2308, refer to the application note [CY2308: Zero Delay Buffer-AN1234](#).

Notes

- 5. User has to select one of the available outputs that drive the feedback pin and need to connect selected output pin to FBK pin externally.
- 6. Output phase is indeterminant (0° or 180° from input clock). If phase integrity is required, use CY2308-2.

Maximum Ratings

Exceeding maximum ratings may shorten the useful life of the device. User guidelines are not tested.

Supply voltage to ground potential -0.5 V to +7.0 V
 DC input voltage (except REF) -0.5 V to $V_{DD} + 0.5$ V

DC input voltage REF -0.5 V to 7 V
 Storage temperature -65 °C to +150 °C
 Junction temperature 150 °C
 Static discharge voltage
 (MIL-STD-883, Method 3015) >2000 V

Operating Conditions for Commercial Temperature Devices

| Parameter | Description | Min | Max | Unit |
|-----------|--|------|-----|------|
| V_{DD} | Supply voltage | 3.0 | 3.6 | V |
| T_A | Operating temperature (ambient temperature) | 0 | 70 | °C |
| C_L | Load capacitance, below 100 MHz | – | 30 | pF |
| | Load capacitance, from 100 MHz to 133 MHz | – | 15 | pF |
| C_{IN} | Input capacitance ^[7] | – | 7 | pF |
| t_{PU} | Power up time for all V_{DD} 's to reach minimum specified voltage (power ramps must be monotonic) | 0.05 | 50 | ms |

Electrical Characteristics for Commercial Temperature Devices

| Parameter | Description | Test Conditions | Min | Max | Unit |
|--------------------|------------------------------------|---|-----|-----------------|------|
| V_{IL} | Input LOW voltage | | – | 0.8 | V |
| V_{IH} | Input HIGH voltage | | 2.0 | – | V |
| I_{IL} | Input LOW current | $V_{IN} = 0$ V | – | 50.0 | μA |
| I_{IH} | Input HIGH current | $V_{IN} = V_{DD}$ | – | 100.0 | μA |
| V_{OL} | Output LOW voltage ^[8] | $I_{OL} = 8$ mA (-1, -2, -3, -4) $I_{OL} = 12$ mA (-1H, -5H) | – | 0.4 | V |
| V_{OH} | Output HIGH voltage ^[8] | $I_{OH} = -8$ mA (-1, -2, -3, -4) $I_{OH} = -12$ mA (-1H, -5H) | 2.4 | – | V |
| I_{DD} (PD mode) | Power down supply current | REF = 0 MHz | – | 12.0 | μA |
| I_{DD} | Supply current | Unloaded outputs, 100 MHz REF, select inputs at V_{DD} or GND | – | 45.0 | mA |
| | | | – | 70.0 (-1H, -5H) | mA |
| | | Unloaded outputs, 66 MHz REF (-1, -2, -3, -4) | – | 32.0 | mA |
| | | Unloaded outputs, 33 MHz REF (-1, -2, -3, -4) | – | 18.0 | mA |

Notes

7. Applies to both Ref clock and FBK.
8. Parameter is guaranteed by design and characterization. Not 100% tested in production.

Typical Duty Cycle and I_{DD} Trends

For CY2308-1, 2, 3, 4 [15, 16]

Notes

15. Duty cycle is taken from typical chip measured at 1.4 V.
16. I_{DD} data is calculated from $I_{DD} = I_{CORE} + nCVf$, where I_{CORE} is the unloaded current.
(n = number of outputs; C = Capacitance load per output (F); V = Voltage supply (V); f = frequency (Hz).

Typical Duty Cycle and I_{DD} Trends

For CY2308-1H, 5H [17, 18]

Notes

- 17. Duty cycle is taken from typical chip measured at 1.4 V.
- 18. I_{DD} data is calculated from $I_{DD} = I_{CORE} + nCVf$, where I_{CORE} is the unloaded current.
(n = number of outputs; C = Capacitance load per output (F); V = Voltage supply (V); f = frequency (Hz)).

| MΩ | megaohm | pF | picofarad |
| μA | microampere | pp | peak-to-peak |
| μF | microfarad | ppm | parts per million |
| μH | microhenry | ps | picosecond |
| μs | microsecond | sps | samples per second |
| μV | microvolt | σ | sigma: one standard deviation |
| μVrms | microvolts root-mean-square | | |

Document History Page

| Document Title: CY2308, 3.3 V Zero Delay Buffer Document Number: 38-07146 | | | | |
|--|---------|-----------------|-----------------|--|
| Rev. | ECN | Orig. of Change | Submission Date | Description of Change |
| ** | 110255 | SZV | 12/17/01 | Changed from Specification number: 38-00528 to 38-07146 |
| *A | 118722 | RGL | 10/31/02 | Added Note 4. |
| *B | 121832 | RBI | 12/14/02 | Power up requirements added to Operating Conditions Information |
| *C | 235854 | RGL | 06/24/04 | Added Pb-free Devices |
| *D | 310594 | RGL | 02/09/05 | Removed obsolete parts in the ordering information table Specified typical value for cycle-to-cycle jitter |
| *E | 1344343 | KVM / VED | 08/20/07 | Brought the Ordering Information Table up to date: removed three obsolete parts and added two parts Changed titles to tables that are specific to commercial and industrial temperature ranges |
| *F | 2568575 | AESA | 09/19/08 | Updated template. Added Note 19 "Not recommended for new designs." Changed IDD (PD mode) from 12.0 to 25.0 μ A for Commercial and Industrial Temperature Devices Deleted Duty Cycle parameters for $F_{out} < 50$ MHz Removed CY2308SI-4, CY2308SI-4T and CY2308SC-5HT. |
| *G | 2632364 | KVM | 01/08/09 | Corrected TSSOP package size (from 150 mil to 4.4 mm) in Ordering Information table |
| *H | 2673353 | KVM / PYRS | 03/13/09 | Reverted I_{DD} (PD mode) and Duty Cycle parameters back to the values in revision *E: Changed I_{DD} (PD mode) from 25 to 12 μ A for commercial temperature devices Added Duty Cycle parameters for $F_{out} < 50$ MHz for commercial and industrial devices. |
| *I | 2897373 | CXQ | 03/22/10 | Updated Ordering Information . Updated Package Diagrams . Updated copyright section. |
| *J | 2971365 | BASH | 07/06/10 | Updated input to output skew and power down current number in Functional Description, page 1 Update pin descriptions in 'Pin Description' column, Table1, page 2 Added 'Input Frequency' parameter and output frequency for -1H and -5H in 'Switching Characteristics Table' and removed footnote, page 4, 5, and 7. Modified Description on page 1 and page 3 to make clear that user has to select one of the outputs to drive feedback. Added footnote in 'Available CY2308 Configurations' Table, page 3, for clarification. |
| *K | 3047133 | CXQ | 10/04/2010 | Sunset Review. No change to data sheet from last revision. |
| *L | 3055192 | CXQ | 10/11/2010 | Updated Ordering Information (Removed part CY2308SXI-5H and CY2308SXI-5HI). |
| *M | 3402187 | BASH | 10/11/2011 | Updated Ordering Information (Removed prune part numbers CY2308SI-1H and CY2308SI-1HT). Updated Package Diagrams . Updated in new template. |

Sales, Solutions, and Legal Information

Worldwide Sales and Design Support

Cypress maintains a worldwide network of offices, solution centers, manufacturer’s representatives, and distributors. To find the office closest to you, visit us at [Cypress Locations](#).

Cypress reserves the right to make changes without further notice to the materials described herein. Cypress does not assume any liability arising out of the application or use of any product or circuit described herein. Cypress does not authorize its products for use as critical components in life-support systems where a malfunction or failure may reasonably be expected to result in significant injury to the user. The inclusion of Cypress’ product in a life-support systems application implies that the manufacturer assumes all risk of such use and in doing so indemnifies Cypress against all charges.

Use may be limited by and subject to the applicable Cypress software license agreement.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
