

### FEATURES

- UL60950-1 recognised
- EN60950-1 certified<sup>2</sup>
- EN/IEC61558-1 recognition pending
- ANSI/AAMI ES60601-1, 1 MOPP/2 MOOP's recognition pending
- Wide input voltage range 85-305VAC/70-400VDC
- Operating temperature range -40°C to 85°C
- 4kVAC isolation 'Hi Pot Test'
- 5V, 12V & 24V single regulated outputs
- Short circuit protection
- No optocoupler
- Low standby power

### PRODUCT OVERVIEW

The BAC1 series is the first series release from the BAC family of board mount AC/DC converters. The BAC1 series operates over the wide industrial temperature range of -40°C to +85°C, supporting operation in still air for the most demanding environments. Models are capable of operation to 85°C, and operate from -40°C. The BAC1 has ultra low standby power consumption for demanding energy and cost saving applications.

**TECHNICAL NOTES****ISOLATION VOLTAGE**

'Hi Pot Test', 'Flash Tested', 'Withstand Voltage', 'Proof Voltage', 'Dielectric Withstand Voltage' & 'Isolation Test Voltage' are all terms that relate to the same thing, a test voltage, applied for a specified time, across a component designed to provide electrical isolation, to verify the integrity of that isolation.

Murata Power Solutions BAC1 series of AC-DC converters are all 100% production tested at their stated isolation voltage. This is 4kVAC for 3 seconds.

A question commonly asked is, "What is the continuous voltage that can be applied across the part in normal operation?"

The BAC1 series has been recognised by Underwriters Laboratory to 277VAC for Reinforced Insulation.

The BAC1 series has been certified by Demko to 240VAC for Reinforced Insulation.

**REPEATED HIGH-VOLTAGE ISOLATION TESTING**

It is well known that repeated high-voltage isolation testing of a barrier component can actually degrade isolation capability, to a lesser or greater degree depending on materials, construction and environment. We therefore strongly advise against repeated high voltage isolation testing, but if it is absolutely required, that the voltage be reduced by 20% from specified test voltage.

**SAFETY APPROVAL****ANSI/AAMI ES60601-1**

The BAC1 series is pending recognition by Underwriters Laboratory (UL) to ANSI/AAMI ES60601-1 and provides 2 MOOP (Means Of Operator Protection) and 1 MOPP (means of patient protection) based upon a working voltage of 277VAC max., between Primary and Secondary. File number E202895 applies.

**EN60950-1**

The BAC1 series has been certified by Demko (D) to EN60950 for reinforced insulation to a working voltage of 240VAC, pending for 277VAC. File number D-07177 applies.

**UL60950-1**

The BAC1 series has been recognised by Underwriters Laboratory (UL) to UL60950 for reinforced insulation to a working voltage of 277VAC. File number E151252 applies.

Creepage 8.3mm and clearance 6.6mm

Working altitude OVC II 5000m

Working altitude OVC III 2000m

**EN/IEC61558-1**

The BAC1 series is pending recognition by TUV SUD to EN/IEC61558-1.

**FUSING**

As stated in the application notes, to meet datasheet specifications it is required that a 1W 10Ω fusible resistor is fitted.

**RoHS COMPLIANCE INFORMATION**

This series is compatible with RoHS soldering systems with a peak wave solder temperature of 260°C for 10 seconds based on IEC 61760-1. The pin termination finish on this product series is Hot Dipped over Matte Tin with Nickel Preplate. The series is backward compatible with Sn/Pb soldering systems. ## ENVIRONMENTAL VALIDATION TESTING

The following tests have been conducted on this product series, please contact Murata if further information about the tests is required.

Test	Standard	Condition
Temperature Cycling	JEDEC JESD22-A104E	200 cycles. -40°C to 105°C, 15 minutes hold at each extreme.
HAST (Unbiased)	JEDEC JESD22-A118B	96Hrs +2/-0Hrs at 130°C ± 2°C, 85% ± 5% R.H.
Storage Life	JEDEC JESD22-A103-E, Condition A	125°C +10/-0°C for ≥1000 hours
Vibration	BS EN 61373 with respect to BS EN 60068-2-64 2008, Test Fh Category 1 Class B	5 – 150Hz. Level at each axis – Vertical, Traverse and Longitudinal: 5.72m/s <sup>2</sup> rms. 5 hours in each axis. Crest factor: 3 Sigma. Device is secured via pins/leads.
Shock	BS EN 61373: 2010, Category 1 Class B	Test is 30ms duration, 3 shocks in each sense of 3 mutually perpendicular axes (18 shocks total). Level at each axis as follows: Vertical, Traverse and Longitudinal: 50m/s <sup>2</sup> . Device is secured via pins/leads.
Solderability	IPC/ECA J-STD-002E, Test A1	Parts are baked for 4 hours at a temperature off 155°C, within 72 hours they are dipped in flux for 10 seconds. Followed by dipping the parts in a solder pot at 255°C ±5°C for 5 seconds (96SC tin/silver/copper)
Solvent cleaning	Resistance to cleaning agents.	Solvent – Novec 71IPA & Topklean EL-20A. Pulsed ultrasonic immersion 45°C- 65°C
Solvent resistance	MIL-STD-883K, Method 2015.14	The parts and the bristle portion of the brush are immersed in Isopropanol for a minimum of 1 minute. The parts are brushed 3 times, after the third time the parts are blown dry and inspected.
Solder Heat	JEDEC JESD22-B106E	The test sample is subjected to a molten solder bath at 270 ±5°C for 7 +2/-0 seconds (96SC tin/silver/copper). The leads are dipped in the solder bath to within 1mm of the device body.
Solder Heat (Hand)	MIL-STD 202H, Method 210, Condition A	The soldering iron is heated to 350°C ± 10°C and applied to the terminations for a duration of 4 to 5 seconds.
Lead Integrity (Adhesion)	MIL-STD 883K, Method 2025.4	Leads are bent through 90° until a fracture occurs.
Lead Integrity (Fatigue)	MIL-STD 883K, Method 2004.7, Condition B <sub>1</sub>	The leads are bent to an angle of 15°. Each lead is subjected to 3 cycles.
Lead Integrity (Tension/Pull)	MIL-STD 883K, Method 2004.7, Condition A <sub>1</sub>	Pull of 0.227kg applied for 30 seconds. The force is then increased until the pins snap.

**Advisory Notes**

The BAC1 series is not hermetically sealed, customers should ensure that parts are fully dried before input power application.

**Output Capacitance and start-up times**

The recommended specified caps on page 4 and 5 can already meet datasheet specification, there is no need to add extra caps. However, if customers connects to load capacitance, the below load capacitance are max (additional to recommended specified caps) to ensure start up at minimum AC input.

Part No.	Maximum Load Capacitance (per output)	Start-up times (AC input)	Start-up times (DC input)
	μF	s	s
<b>BAC1S05SC</b>	220	0.5	5
<b>BAC1S12SC</b>	100	1	5
<b>BAC1S24SC</b>	100	1	5

**Minimum Load**

The minimum load to meet full datasheet specification is 5% of the full rated load across the specified input voltage range.

**24V output type - minimum input voltage requirements**

At -40C the part is guaranteed to start into 100% load with a minimum input voltage of 115Vac; once the product is operating, the product will continue to operate at lower input voltages with higher output loading.

The product will start at -40C with 80% or lower load with an input voltage of 100VAC; once the product is operating, the product will continue to operate at lower input voltages with higher output loading.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
