

# LUXEON Z Colors

High-power color LEDs in a micro footprint package for ultimate design flexibility

LUXEON Z Colors is a broad portfolio of LEDs that enable never before seen lumen density, flexibility and freedom of design. Available in the full spectrum of colors from 440nm to 670nm, including Lime enabling highly efficient color mixing by providing a convenient above-blackbody color point with optical standalone efficacy. LUXEON Z Colors are ideal for entertainment and stage lighting, indoor and outdoor architectural lighting, emergency vehicle lighting, remote phosphor applications and a wide spectrum of specialty lighting applications.

## FEATURES AND BENEFITS

- Broad gamut, 440-670nm, including unique Lime color
- 2.2mm<sup>2</sup> footprint enables unique arrangements in space constrained applications
- 4-up RGBW pixel in 9.5mm<sup>2</sup> — four colors in less area than one regular high power color emitter
- Undomed design allows better optical management through collimated light output
- Enables customizable light sources: linear, rectangular, circular

## PRIMARY APPLICATIONS

- Architectural
- Lamps
- Specialty Lighting

# General Information

## Part Number Nomenclature

LUXEON Z Color emitters are tested and binned at 25°C or 85°C, 500mA, depending on the product.

The part number designation for LUXEON Z Color LEDs is explained as follows:

L X Z 1 - A B C D - E F G H

Where:

- A — designates radiation pattern (value P for lambertian)
- B — designates color (see LUXEON Z color binning and labeling section)
- C — designates color variant (0 for color variants)
- D — designates color version (1, 2, etc.)
- E — open slot to accommodate additional requirements per product and part number
- FGH — (optional) minimum luminous flux (lm) or radiometric power (mW) performance

Please see DS120 for LUXEON Z White part number designation.

## Flux Performance, Binning, and Supportability

LEDs are produced with semiconductor technology that is subject to process variation, yielding a range of flux performance that is approximately Gaussian in nature. In order to provide customers with fine granularity within the overall flux distribution, Lumileds separates LEDs into fixed, easy to design with, minimum luminous flux bins. To verify supportability of parts chosen for your application design, please consult your Lumileds sales representative.

Notes for Table 3:

- Dominant wavelength is derived from the CIE 1931 Chromaticity diagram and represents the perceived color. Lumileds maintains a tolerance of  $\pm 0.5$  nm for dominant wavelength measurements.
- Royal Blue and Deep Red LEDs are binned by radiometric power and peak wavelength rather than photometric lumens. Lumileds maintains a tolerance of  $\pm 2$ nm for peak wavelength measurements.
- Spectral width at 1/2 of the peak intensity.
- Total angle at which 90% of total luminous flux is captured.
- Viewing angle is the off axis angle from lamp centerline where the luminous intensity is 1/2 of the peak value.
- Green, cyan, blue, royal blue, PC Amber, Lime and white products are built with Indium Gallium Nitride (InGaN).
- All red, deep red, red-orange, and amber are built with Aluminum Indium Gallium Phosphide (AlInGaP).
- LUXEON Z Lime, PC Amber and certain Red, Red-Orange and Amber emitters are tested and binned at  $T_J = 85^\circ\text{C}$ . All other LUXEON Z Color emitters are tested and binned at  $T_J = 25^\circ\text{C}$ .
- Wavelength ranges for hot tested Red, Red-Orange and Amber have been defined to align with typical changes in spectral output at increased temperature, which are inherent to AlInGaP LEDs. At  $T_J = 25^\circ\text{C}$  these hot-tested parts will have the same typical spectral outputs as their cold-tested counterparts.

# Product Binning and Labeling

## Purpose of Product Binning

In the manufacturing of semiconductor products, there is a variation of performance around the average values given in the technical data sheets. For this reason, Lumileds bins the LED components for luminous flux, color and forward voltage ( $V_f$ ).

## Decoding Product Bin Labeling

LUXEON Z Color Portfolio emitters are labeled using a three or four digit alphanumeric code (CAT code) depicting the bin values for emitters packaged on a single reel. All emitters packaged within a reel are of the same bin combination. Using these codes, it is possible to determine optimum mixing and matching of products for consistency in a given application.

## Format of Labeling for Emitters

Reels of lime, green, cyan, blue, royal blue, red, red-orange, amber and deep red emitters are labeled with a three digit alphanumeric CAT code following the format below.

A B C

A = Flux bin (J, K, L, M, etc.)

B = Color bin (2, 4, 6, etc.)

C =  $V_f$  bin (4, 5, etc.)

Reels of PC Amber are labeled with the following CAT code format below.

A B C D

A = Flux bin (G, H, J etc.)

BC = Color bin (A1)

D =  $V_f$  bin (5, 6 etc.)

# Luminous Flux Bins

Tables 8, 9 and 10 list the standard photometric luminous flux/radiometric power bins for LUXEON Z color emitters (tested and binned at 500mA). Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all colors.

Notes for Tables 19, 20 and 21:

1. Wavelength ranges for hot tested Red, Red-Orange and Amber have been defined to align with typical changes in spectral output at increased temperature, which are inherent to AlInGaP technology. At  $T_j = 25^\circ\text{C}$  these hot-tested parts will have the same typical spectral outputs as their cold-tested counterparts.

# Color Bins, Continued

## Forward Voltage Bins

The following forward voltage bins include the minimum and maximum  $V_f$  bin values for the emitter. Although several bins are outlined, product availability in a particular bin varies by production run and by product performance.

# About Lumileds

Lumileds is the light engine leader, delivering innovation, quality, and reliability.

For 100 years, Lumileds commitment to innovation has helped customers pioneer breakthrough products in the automotive, consumer and illumination markets.

Lumileds is shaping the future of light with our LEDs and automotive lamps, and helping our customers illuminate how people see the world around them.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
