
4-Ch. 5-Level $\pm 80V$ High-Voltage Ultrasound Pulser with T/R Switches

Features

- Power Sequencing Free 5 Output Levels including RTZ (Return-to-Zero)
- -44 dB Single-Cycle Pulse-Inversion Second Harmonic Distortion (HD2) at 5 MHz
- Output Voltage up to $\pm 80V$
- $\pm 2.5A$ Peak Output Current
- ± 300 mA Current from V_{PP1}/V_{NN1} in CW Mode-0
- Integrated T/R Switch & RX Damper Switch
- Bleeder Switches Achieve True Zero during RTZ
- Supports Both Transparent and Re-Timing Mode
- Re-Timing Clock Frequency Supports up to 220 MHz
- Built-In Output Protection Diodes and Clamp Diodes
- +2.5/+3.3V Input Logic
- Built-In CW Switches to Pair with External CW Transmitters (CW Mode-1)
- 9 mm x 9 mm 64-Lead VQFN Package

Applications

- Medical Ultrasound Imaging Systems
- NDT Ultrasound
- Piezoelectric or Capacitive Transducer Drivers

General Description

The HV7321 is a 4-channel, 5-level, ultrasound transmitter with built-in T/R switches, output protection diodes and clamp diodes. The HV7321 can provide up to $\pm 2.5A$ and the output voltage swing can be up to $\pm 80V$. The HV7321 supports both Transparent and Re-Timing mode. The re-timing clock frequency can support up to 220 MHz. The re-timing feature helps reduce the output jitter introduced by the driving the field-programmable gate array (FPGA).

The HV7321 has two different modes for CW transmission, CW-Mode 0 and CW-Mode 1.

In CW-Mode 0 (Mode = 0, PWS = 0), the V_{PP1} and V_{NN1} rails are used for CW transmission. The output current is reduced in CW Mode-0.

In CW-Mode 1, the HV7321 accepts the output of an external CW beamformer as CW source.

The HV7321 is LVCMOS 2.5V/3.3V input compatible, which can be interfaced with the FPGA directly.

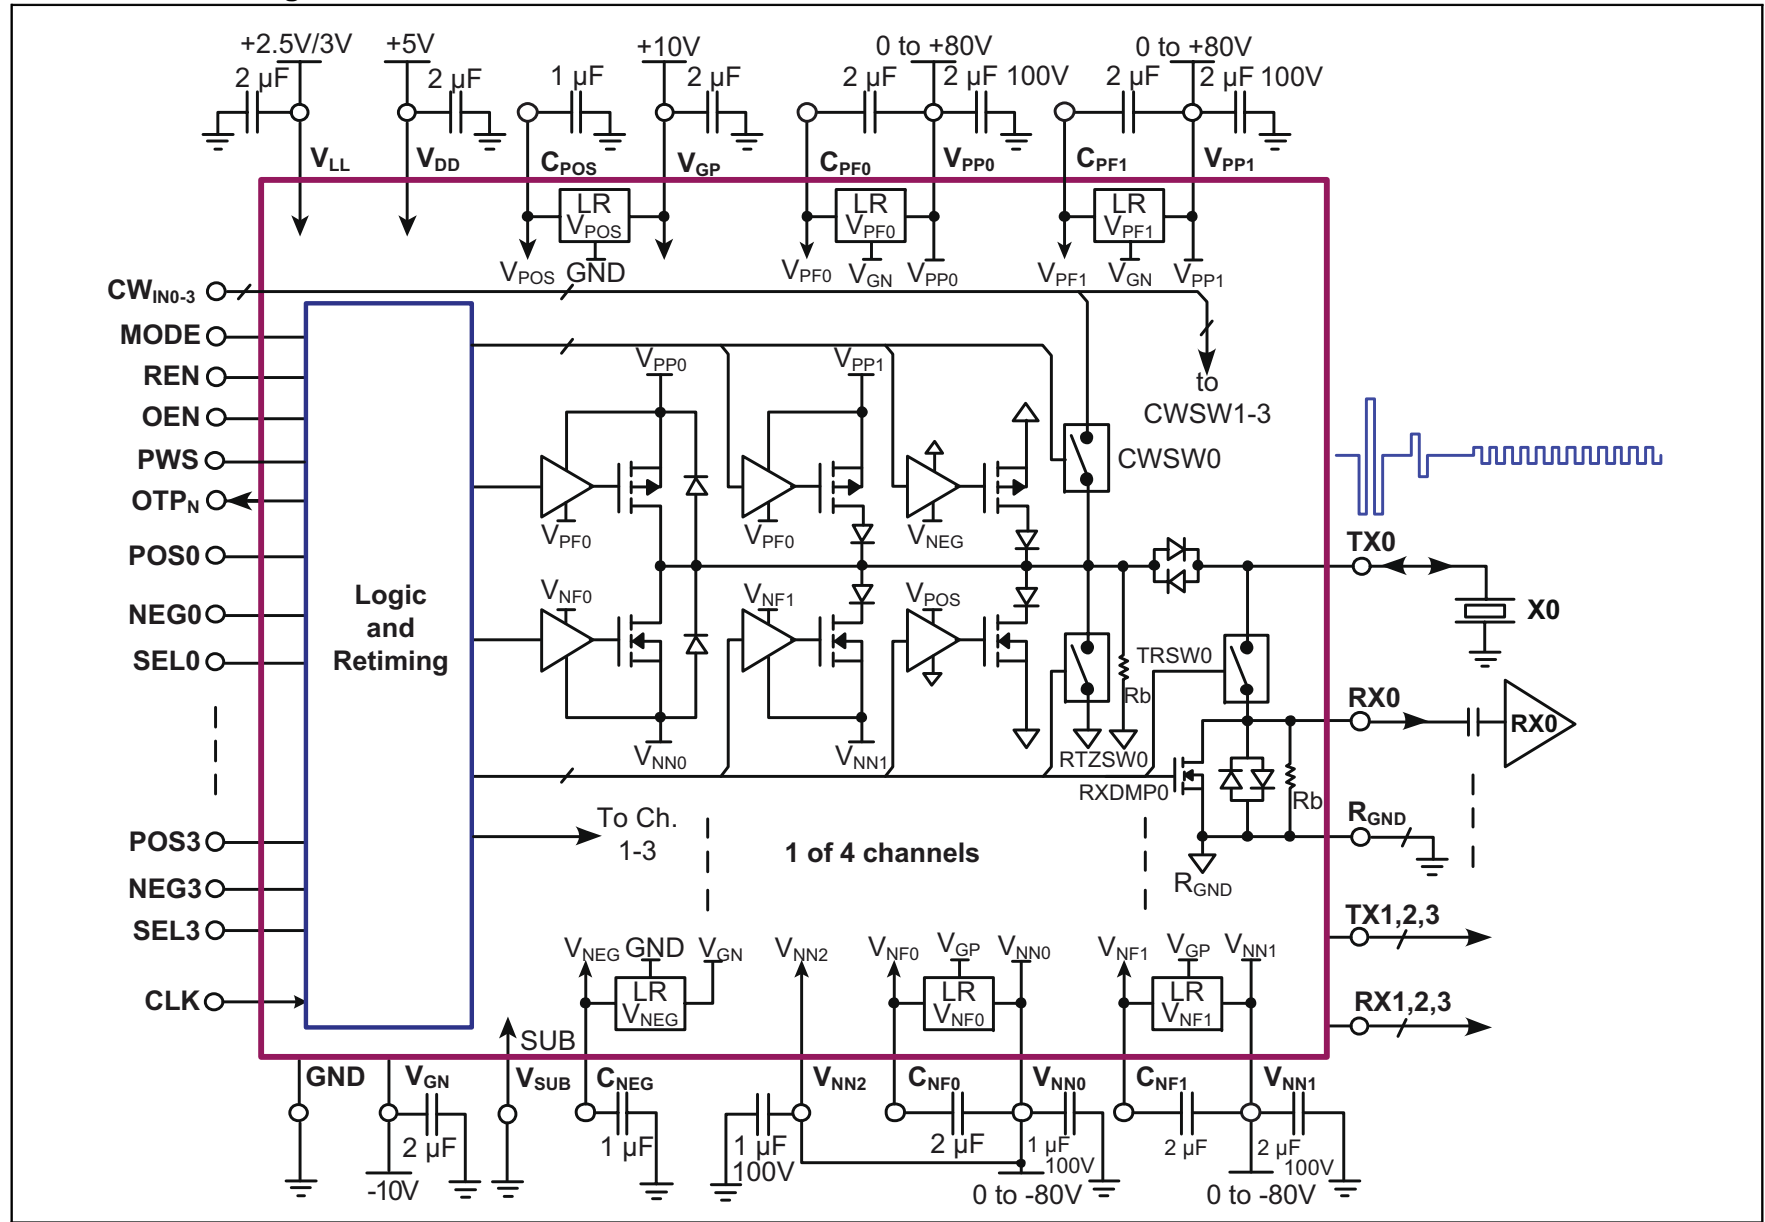

The HV7321 is available in a 9 mm x 9 mm 64-Lead VQFN package.

HV7321

1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings †

Positive logic supply (V_{LL}).....	-0.5V to +5.5V
All I/O & CLK pin voltage (V_{IO}).....	-0.5V to +5.5V
Positive voltage supply (V_{DD}).....	-0.5V to +5.5V
Positive gate driver supply (V_{GP}).....	-0.5V to +13.5V
Negative gate driver supply (V_{GN}).....	-13.5V to +0.5V
High voltage positive supply ($V_{PP0,1}$).....	-1.0V to +85V
High voltage negative supply ($V_{NN0,1,2}$).....	-85V to +1.0V
CW input voltage (V_{CWIN}).....	-7.5V to +7.5V
TX pin voltage (V_{TX}).....	-85V to +85V
RX pin to GND voltage (V_{RX}).....	± 0.7 to ± 1.4 V
Operating temperature.....	0°C to +85°C
Storage temperature.....	-55°C to +150°C
Maximum junction temperature.....	+130°C
Maximum not-latch-up current.....	+100 mA
ESD Rating $CW_{IN,TX}, V_{PP}, V_{NN}$ pins.....	± 500 V
ESD Rating – all other pins.....	± 2 kV

† **Notice:** Stresses above those listed under “Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational sections of this specification is not intended. Exposure to maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

Electrical specifications: $V_{LL} = +2.5$ V, $V_{DD} = +5.0$ V, $V_{PP0,1} = +80$ V, $V_{NN0,1,2} = -80$ V, $V_{GP} = +10$ V, $V_{GN} = -10$ V, $V_{SUB} = 0$ V, $PWS = OEN = REN = 1$, $T_A = 25^\circ$ C, unless otherwise specified. Parameters in **Bold** apply over the operating temperature range of $T_A = T_J = 0$ to **+85°C**.

Parameter	Sym.	Min.	Typ.	Max.	Unit	Conditions
Operating Supply Voltages						
Positive Logic Supply	V_{LL}	2.25	2.50	3.60	V	Note 1
Positive Voltage Supply	V_{DD}	4.75	5.0	5.25	V	Note 1
Positive Gate Driver Supply	V_{GP}	8.0	10	12	V	Note 1 See Table 3-1 .
Negative Gate Driver Supply	V_{GN}	-12	-10	-8.0		
High Voltage Positive Supply	V_{PP0}	0	—	80	V	Note 1 Must be $V_{PP0} \geq V_{PP1}$
	V_{PP1}	0	—	80		
High Voltage Negative Supply	V_{NN0}	-80	—	0	V	Note 1 Must be $V_{NN0} \leq V_{NN1}$
	V_{NN1}	-80	—	0		
Operating Supply Current						
V_{LL} Quiescent Current	I_{LLQ}	—	0.06	0.7	μ A	OEN = REN = 0
V_{DD} Quiescent Current	I_{DDQ}	—	30	80	μ A	
V_{PP0} Quiescent Current	I_{PP0Q}	—	0.37	6	μ A	
V_{NN0} Quiescent Current	I_{NN0Q}	-9	-0.78	—	μ A	
V_{PP1} Quiescent Current	I_{PP1Q}	—	0.44	10	μ A	
V_{NN1} Quiescent Current	I_{NN1Q}	-10	-1.46	—	μ A	
V_{NN2} Quiescent Current	I_{NN2Q}	-7	-3.84	—	μ A

Thermal Protection Activated	0	x	x	x	x	x	x	x	high Z	OFF	OFF	ON

- Note**
- 1: In Pulsed-Echo mode, low duty cycle must be used due to the IC power dissipation limit.
 - 2: When PWS = 0, V_{PP1}/V_{NN1} output current is reduced for low-voltage CW mode-0. V_{PP0}/V_{NN0} output current is unaffected when PWS = 1, as in Pulsed-Echo mode.
 - 3: In CW MODE = 1, the CWSW is turned on to use external CW waveform at CW_{IN}, if the channel SEL = NEG = POS = 0.
 - 4: When SEL = 0, NEG = 1, POS = 1, the channel is in Receiving mode (RTZ+).

						0	1	1	RTZ+ ⁽⁴⁾	ON	OFF	OFF
Device Disabled	x	0	x	x	x	x	x	x	high Z	OFF	OFF	ON
Thermal Protection Activated	0	x	x	x	x	x	x	x	high Z	OFF	OFF	ON

Note 1: In Pulsed-Echo mode, low duty cycle must be used due to the IC power dissipation limit.
Note 2: When PWS = 0, V_{PP1}/V_{NN1} output current is reduced for low-voltage CW mode-0. V_{PP0}/V_{NN0} output current is unaffected when PWS = 1, as in Pulsed-Echo mode.
Note 3: In CW MODE = 1, the CWSW is turned on to use external CW waveform at CWIN, if the channel SEL = NEG = POS = 0.
Note 4: When SEL = 0, NEG = 1, POS = 1, the channel is in Receiving mode (RTZ+).

1.1 TYPICAL TIMING DIAGRAMS

Figure 1-1 shows the timing of control inputs and RTZ, T/R and RXDMP switches per each channel of the HV7321.

Upon the completion of a receiving period, an RTZ period (SEL, NEG, POS = 000) should be asserted before transmitting again.

3.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in [Table 3-1](#).

TABLE 3-1: PIN FUNCTION TABLE

Pin	Symbol	Description
1	CW _{IN0}	External CW input for channel 0
2	SEL1	SEL input logic pin selects transmission high-voltage rails for channel 1. If SEL = 0, select V _{PP0} /V _{NN0} . If SEL = 1, select V _{PP1} /V _{NN1} . See Table 1-1 .
3	NEG1	NEG input logic pin turns on/off corresponding output N-channel MOSFET for channel 1. See Table 1-1 .
4	POS1	POS input logic pin turns on/off corresponding output P-channel MOSFET for channel 1. See Table 1-1 .
5	CW _{IN1}	External CW input for channel 1
6	OEN	Output enable logic input pin. When OEN = V _{LL} , the transmitter outputs are enabled. When OEN = 0, the transmitter outputs are disabled.
7	PWS	Logic input pin. When PWS = 0, the output FETs for V _{PP1} and V _{NN1} are scaled down to reduce the output current for CW Mode-0.
8	CLK	Re-timing clock input pin. Connect CLK to ground for transparent mode.
9, 22, 59	GND	Ground
10	V _{LL}	Input logic power supply pin
11	REN	Enable pin for the built-in voltage regulators. See section Section 4.3 “Operation Modes” for details.
12	SEL2	SEL input logic pin selects transmission high-voltage rails for channel 2. If SEL = 0, select V _{PP0} /V _{NN0} . If SEL = 1, select V _{PP1} /V _{NN1} . See Table 1-1 .
13	NEG2	NEG input logic pin turns on/off corresponding output N-channel MOSFET for channel 2. See Table 1-1 .
14	POS2	POS input logic pin turns on/off corresponding output P-channel MOSFET for channel 2. See Table 1-1 .
15	CW _{IN2}	External CW input for channel 2
16	SEL3	SEL input logic pin selects transmission high-voltage rails for channel 3. If SEL = 0, select V _{PP0} /V _{NN0} . If SEL = 1, select V _{PP1} /V _{NN1} . See Table 1-1 .
17	NEG3	NEG input logic pin turns on/off corresponding output N-channel MOSFET for channel 3. See Table 1-1 .
18	POS3	POS input logic pin turns on/off corresponding output P-channel MOSFET for channel 3. See Table 1-1 .
19	CW _{IN3}	External CW input for channel 3
20	OTP _N	Temperature sensor open drain output
21, 60	V _{DD}	+5V supply
23	V _{GP}	+10V supply pin for the linear regulator
24, 25, 56, 57	V _{PP0}	Positive high-voltage supply pin. V _{PP0} must be equal to or greater than V _{PP1} .
26, 55	C _{PF0}	Internal linear regulator output pin. Connect 2 μF 10V capacitor to V _{PP0} .
27, 54	C _{NF0}	Internal linear regulator output pin. Connect 2 μF 10V capacitor to V _{NN0} .
28, 29, 52, 53	V _{NN0}	Negative high-voltage supply pin. V _{NN0} must be equal to or more negative than V _{NN1,2} .
30, 51	V _{NN2}	Negative high-voltage supply pin. V _{NN2} connects to the most negative supply rail.
31, 50	V _{NN1}	Negative high-voltage supply pin. V _{NN1} must be equal to or less negative than V _{NN0} .
32, 49	C _{NF1}	Internal linear regulator output pin. Connect 2 μF 10V capacitor to V _{NN1} .
33, 48	C _{PF1}	Internal linear regulator output pin. Connect 2 μF 10V capacitor to V _{PP1} .
34, 47	V _{PP1}	Positive high voltage supply V _{PP1} . Must be equal to or lower than V _{PP0} .
35	TX3	Channel 3 transmitter output pin

HV7321

TABLE 3-1: PIN FUNCTION TABLE (CONTINUED)

Pin	Symbol	Description
36	RX3	Channel 3 T/R switch output
37, 44	R _{GND}	Power ground
38	RX2	Channel 2 T/R switch output
39	TX2	Channel 2 transmitter output pin
40	C _{NEG}	Internal linear regulator output pin. Connect 1 μ F 10V capacitor to GND.
41	C _{POS}	Internal linear regulator output pin. Connect 1 μ F 10V capacitor to GND.
42	TX1	Channel 1 transmitter output pin
43	RX1	Channel 1 T/R switch output
45	RX0	Channel 0 T/R switch output
46	TX0	Channel 0 transmitter output pin
58	V _{GN}	-10V supply pin for the linear regulator
61	MODE	CW Mode selection pin. See section Section 4.3 “Operation Modes” .
62	SEL0	SEL input logic pin selects transmission high-voltage rails for channel 0. If SEL = 0, select V _{PP0} /V _{NN0} . If SEL = 1, select V _{PP1} /V _{NN1} . See Table 1-1 .
63	NEG0	NEG input logic pin turns on/off corresponding output N-channel MOSFET for channel 0. See Table 1-1 .
64	POS0	POS input logic pin turns on/off corresponding output P-channel MOSFET for channel 0. See Table 1-1 .
Thermal Pad	V _{SUB}	Connect to ground.

4.0 DEVICE DESCRIPTION

4.1 Overview

The HV7321 is a 4-channel, 5-level ultrasound transmitter with built-in T/R switches, output protection diodes and clamp diodes.

The HV7321 can provide up to $\pm 2.6A$ and the output voltage swing can be up to $\pm 80V$.

The HV7321 supports both Transparent and Re-Timing mode. The re-timing clock frequency can support up to 220 MHz. The re-timing feature helps reduce the output jitter introduced by the driving FPGA.

4.2 Recommended Power-up Sequence

Powering up/down in any arbitrary sequence will not cause any damage to the device. The powering-up sequences in Table 4-1 are only recommended in order to minimize possible in-rush current. Figure 4-1 shows the timing diagram of related signals.

TABLE 4-1: POWER-UP SEQUENCE

Step	Power-Up Description
1	V_{LL} ON with logic signal low
2	V_{DD} , V_{GP} and V_{GN} ON
3	REN = 1
4	$V_{PP0,1}$ and $V_{NN0,1}$ ON
5	OEN = 1 & Logic control signal active

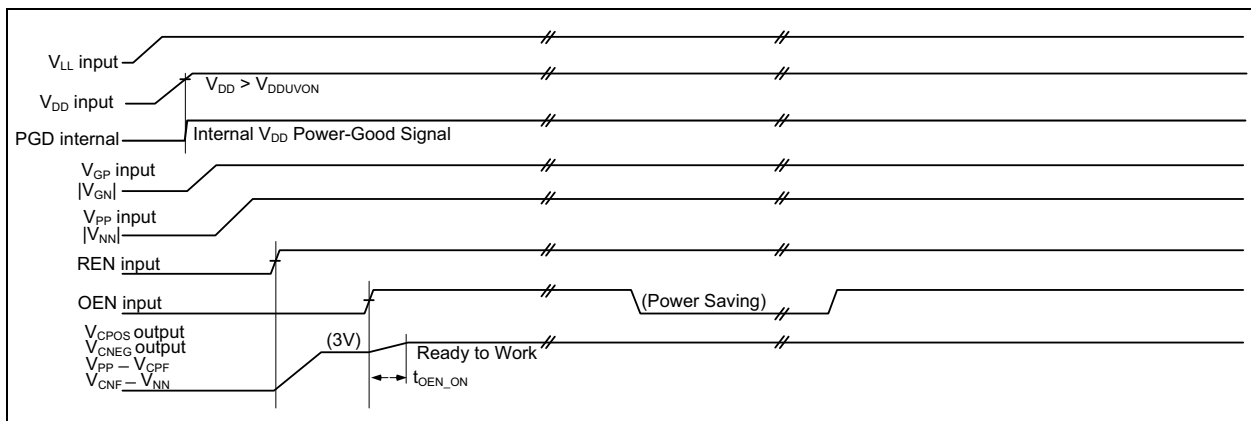

FIGURE 4-1: Power-On Events and Power-Saving Time Diagram.

4.3 Operation Modes

There are five modes of operation: Device Disabled, Output Disabled, Pulsed-Echo Mode, CW Mode-0 and CW Mode-1.

4.3.1 DEVICE ENABLE MODE

In Device Disabled mode, the regulators are turned off when REN is low. The regulators are ON when REN = V_{LL} . All regulators are ON except V_{NEG} and V_{POS} for power saving when REN = 1. When REN is low, OEN = X (OEN = 1 or 0) since device is disabled. Refer to Table 4-2.

TABLE 4-2: REN & OEN LOGIC INPUTS

REN	OEN	Device	TX Output
0	X	Disabled	high Z
1	0	Enabled	high Z
1	1	Enabled	ON

4.3.2 OUTPUT HIGH Z MODE

In Output Disabled mode, regulators are enabled REN = 1 and OEN = 0 (Output Enable logic input) and output pins (TX0-3) are in high Z state. OEN = 1 enables the outputs.

4.3.3 PULSED-ECHO MODE

Pulsed-Echo mode (B-mode) enables the 5-level waveform generation. OEN = 1, MODE = 0, and PWS = 1 enable Pulsed-Echo mode after HV7321 powers on. SEL/NEG/POS inputs of desired channel determine the corresponding TX Output pulse.

HV7321

4.3.4 CW MODE-0

CW Mode-0 enables continuous wave mode provided solely by the HV7321. OEN = 1, MODE = 0 and PWS = 0 activate CW Mode-0. FPGA selects V_{PP1} and V_{NN1} amplitudes via SEL/NEG/POS inputs.

In theory, V_{PP0} and V_{NN0} can be selected but this is strongly discouraged since V_{PP0} and V_{NN0} usage increases power consumption and causes excessive heating in CW Mode-0.

4.3.5 CW MODE-1

CW Mode-1 is enabled using an external CW signal source for continuous wave mode. OEN = 1 and MODE = 1 activate CW Mode-1. External CW signals can connect to any of CW_{IN0-3} . In this mode, the CW signal source also feeds the CLK input. See [Table 4-3](#) for details.

TABLE 4-3: MODE & PWS LOGIC INPUTS

Mode	PWS	State
1	X	CW Mode-1

4.3.5.1 External CW Beamformer Option (CW Mode-1)

The HV7321 has built-in CW switches that allow the use of an external CW beamformer to further minimize jitter and phase noise on CW waveforms. This mode is called CW Mode-1.

One suggested external CW beamformer is the MD1730, which has very low phase noise and 8-channel CW output. A pair of HV7321s can operate with the MD1730 as an 8-channel CW waveform generator. See [Figure 4-2](#).

The MD1730 supports both differential and single-ended signals using CLKP and CLKN inputs. The MD1730 enables setting the CW output phase delay and frequency for channels via SPI. Please refer to the MD1730 data sheet for more information.

TABLE 4-3: MODE & PWS LOGIC INPUTS

Mode	PWS	State
0	0	CW Mode-0
0	1	Pulsed-Echo

FIGURE 4-2: HV7321 + MD1730 Integration.

4.4 High Temperature Protection

When overtemperature is detected, OTPN = 0 and all outputs are high Z regardless of OEN and the other logic control inputs. [Table 4-4](#) shows the relationship between REN, OEN inputs, OTPN output, and the corresponding device status.

TABLE 4-4: REN, OEN, OTP_N VS. DEVICE STATUS

OTPN	REN	OEN	Device	TX Output
0	0	X	Disabled	high Z
0	1	X	Enabled	high Z
1	0	X	Disabled	high Z
1	1	0	Enabled	high Z
1	1	1	Enabled	ON

HV7321

NOTES:

5.0 PACKAGING INFORMATION

5.1 Package Marking Information

64-Lead VQFN (9 x 9 x 1.0 mm)

Example

<p>Legend: XX...X Product Code or Customer-specific information Y Year code (last digit of calendar year) YY Year code (last 2 digits of calendar year) WW Week code (week of January 1 is week '01') NNN Alphanumeric traceability code (e3) Pb-free JEDEC designator for Matte Tin (Sn) *This package is Pb-free. The Pb-free JEDEC designator () (e3) can be found on the outer packaging for this package.</p>
<p>Note: In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information. Package may or may not include the corporate logo.</p>

64-Lead QFN Package Outline (K6) 9.00x9.00mm body, 1.00mm height (max), 0.50mm pitch

Note: For the most current package drawings, see the Microchip Packaging Specification at www.microchip.com/packaging.

Notes:

1. A Pin 1 identifier must be located in the index area indicated. The Pin 1 identifier can be: a molded mark/identifier; an embedded metal marker; or a printed indicator.
2. Depending on the method of manufacturing, a maximum of 0.15mm pullback (L1) may be present.
3. The inner tip of the lead may be either rounded or square.

NOTES:

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELoc® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
