DF1B Series

■Features

1. New Insulation Displacement and Crimping Ideas

This connector is a new type to insert the ID contacts in the case. Using this method, the following merits can be gained.

① By using the ID contact and crimping contact together, different current capacity cables can be mixed in one case.

② After connection, the contact can be replaced in excellent maintainability.

③ Because the insulation displacement area is protected by the case, high reliability can be assured.

④ Since the insulation displacement process can be performed only by replacing the applicator of the existing crimping machine, no expensive machine for insulation displacement is required.

2. Potting Header Available

The high profile header is also available, corresponding to the board potting process (sealed with resin) as waterproof measures.

3. Broad Variations

The single row and double row contacts are aligned for "Board to Cable" and "In-line" series, respectively, while standard tin and gold plating products are available.
(Refer to the applicable combination pattern on next page.)

Cables with different current capacities can be mixed in one case
