

RF5365

2.4GHz to 2.5GHz, 802.11b/g/n WiFi Front End Module

The RF5365 provides an integrated front end solution for WiFi 802.11b/g/n and Bluetooth® systems. The ultra-small form factor package and integrated matching greatly reduces the number of external components and layout area in the customer application. This simplifies the total front end solution by reducing the bill of materials, system footprint, and assembly cost.

The RF5365 integrates a 2.4 GHz Power Amplifier (PA), 2170 MHz notch filter for coexistence with cellular radios, second harmonic attenuation, power detector coupler for improved accuracy, and an SP3T switch capable of simultaneous reception for WiFi and Bluetooth®. The device is provided in a 2.5 mm x 2.5 mm x 0.5 mm, 12pin package. This module meets or exceeds the RF front end needs of IEEE 802.11b/g/n WiFi RF systems.

Evaluation Board Schematic

Note: Components C5, and C6 may not be needed in the final schematic. This will be dependent on board layout and noise coupling to these pins. TX input connects directly to the transceiver. If no DC is present on this pin, C8 may also be eliminated.

Evaluation Board Layout

Note: For best performance, it is recommended to follow the routing and grounding of the RFMD evaluation board as close as possible. At a minimum, use five ground thermal vias on the package center slug (via size: 12mil hole by 21mil capture pad)

PCB Recommendations

PCB land patterns for RFMD components are based on IPC-7351 standards and RFMD empirical data. The pad pattern shown has been developed and tested for optimized assembly at RFMD. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from company to company, careful process development is recommended.

Thermal vias for center slug "B" should be incorporated into the PCB design. The number and size of thermal vias will depend on the application. Example of the number and size of vias can be found on the RFMD evaluation board layout.

Pin Names and Descriptions

Pin	Name	Description				
1	RX OUT	Receive port for 802.11b/g/n band. Internally matched to 50Ω . DC block required.				
2	VREG	Regulated voltage for the PA bias control circuit. An external bypass capacitor may be needed on the VREG line for decoupling purposes.				
3	TX IN	RF input for the 802.11b/g/n PA. Input is matched to 50Ω . DC block required.				
4	VCC	Supply voltage for the FEM. Power down pin. Apply <0.6 V_{DC} to power down the power amplifier stages. Apply 2.5 V_{DC} to 3.6 V_{DC} to power up. If function is not desired, pin may be connected to V_{CC} or V_{REG} .				
5	VCC	Supply voltage for the FEM.				
6	POWER DETECT	Power detector voltage for TX section. PDET voltage varies with output power. May need external decoupling.				
7	ANT	Port matched to 50Ω . DC block required.
