

Medium Voltage Fuse Links Full Line Catalogue

Cooper Bussmann, a division of Cooper Industries, is the leading source of circuit protection solutions in the global marketplace. Cooper Bussmann products are approved for use around the world and meet agency requirements and international standards: IEC, VDE, DIN, UL, CSA, BS and others.

Cooper Bussmann global headquarters are in St Louis, Missouri (US) and the European headquarters are in Burton-on-the-Wolds, Leicestershire (UK).

Cooper Bussmann manufactures over 50,000 part numbers covering extensive circuit protection solutions for a wide range of applications: residential, industrial, motor protection, power conversion, distribution, telecommunications, electronics and automotive.

Cooper Bussmann has been a leading exponent in the design, development and manufacture of medium voltage fuse links and their associated accessories for more than 90 years and has supplied fuse links to more than 90 countries worldwide.

The Cooper Bussmann team of specialist engineers plays a leading role in international standardisation of medium voltage fuse links, offering comprehensive advice on selection and applications.

With a continual commitment to meet our customers' needs with innovative high quality products with ISO 9002 'approval systems,' Cooper Bussmann is the supplier of choice for medium voltage circuit protection solutions, today.

Introduction to Medium Voltage Fuse Link Technology

Offering unparalleled short-circuit interruption capabilities, Medium Voltage (MV) current-limiting fuse links are the principle protection device used by electrical utilities and switchgear manufacturers throughout the world. Safe, reliable, environmentally friendly and cost effective, MV fuse links are the protection device of choice for distribution circuits due to their speed of operation and **current limiting** ability in the event of a short-circuit fault.

The diagram below shows the operation of a fuse link interrupting a short-circuit fault, achieving a current zero well within the first half-cycle of a fault. Energy let-through into the site of a fault maybe typically only **1/500th of that of any other type of switching device.**

The speed of operation reduces the effect of short-circuit currents, dramatically limiting the energy delivered to the faulted circuit, preventing the catastrophic results of high faults and disturbing voltage arcs. The fuse link operation significantly limits the arc-flash hazard at the fault location. Improved power supply quality also results from the use of fuse links. High fault currents are interrupted in a few milliseconds, minimising voltage dips in system supply voltage.

Glossary for Medium Voltage Fuse Links

The following is a brief introduction to medium voltage fuse link technology. Some of the terms are also used in other areas of fuse technology.

- **Current rating/Rated current, I_n** - The rated current of the fuse link, given in amps.
- **Derating** - A reference to the fact that all MV fuse links must be derated once they are placed in a confined space, for example when mounted in switchgear. The fuse link must be derated to take into account the effect of heating on element resistance. Typically a fuse link is derated by between 5-20% depending on application.
- **Test Duty, TD** - A term used to refer to a specific type test within the IEC standard. Test Duty one (**TD1**), short-circuit test, Test Duty two (**TD2**), maximum arc energy test and Test Duty three (**TD3**), low overcurrent test.
- **Minimum Breaking Capacity Current, MBC, I_3** - The minimum current the fuse link can interrupt safely, without assistance from switchgear with instantaneous striker tripping.
- **Minimum Fusing Current (MFC)** - The minimum current which will cause the fuse link elements to **start to melt**.
- **I^2T** - The minimum value of pre-arcing and maximum value of total clearing energy a fuse link will allow to pass through it during short circuit operation, expressed as an amount of current (I^2), multiplied by time in seconds.
- **Watts Loss** - The power dissipation of the fuse link at a stated value of load current.
- **Breaking Capacity, I_1** - The maximum short circuit current the fuse link has been tested to in accordance with test Duty one (TD1), expressed in kA.
- **Resistance** - The resistance of the fuse link in free air at (20°C), measured in mΩ.

Introduction to Medium Voltage Fuse Link Technology

The main standard covering Medium Voltage (MV) fuse links is IEC 60282-1, 2009. IEC defines **MV** as from **1kV to 72.5kV**.

Current-limiting MV fuse links, split into three internationally recognised types: **Back-Up** (or sometimes called partial range), fuse links, which will interrupt any current from their rated breaking capacity down to a minimum breaking current, specified by the manufacturer. **General Purpose** MV fuse links will interrupt all currents that will melt the elements within one hour. **Full Range** MV fuse links can interrupt any current below the rated breaking capacity that melts the fuse elements satisfactorily. The diagram below illustrates the three performance criteria in terms of their minimum breaking current I_3 .

Current-limiting MV fuse links are similar in construction to Low Voltage (LV) cartridge types. Fuse elements do need to be much longer however to safely interrupt a medium voltage short-circuit. This is achieved by winding the elements round an internal core or holder, often called a star-core or spider; using this technique a one metre length element can be accommodated in a 250mm length body. The elements are surrounded by a pure, highly compacted granular quartz filler.

Like a LV fuse link, a MV fuse link has a ceramic body. Most current-limiting MV fuse links are also fitted with a striker mechanism. This is used to operate the trip bar or mechanism in a fuse-switch combination, fuse-switch or ring main unit (RMU) to achieve low overload fault interruption and three-phase disconnection.

Typically striker mechanisms are driven by a spring mechanism, triggered by a thin striker wire or striker coil running the length of the fuse link, connected in parallel to the fuse link elements. The striker coil is of much higher resistance than the fuse link elements, so a current only flows through the striker coil when the fuse link elements melt. The current heats up the striker coil and this in turn melts the wire retaining the spring, releasing it and pushing out the striker.

Introduction to Medium Voltage Fuse Link Technology

Non-Current Limiting

Essentially, non-current limiting fuse links have short elements and incorporate some means of lengthening the arc after the element melts, extinguishing the arc and preventing re-ignition. These are known as **expulsion fuse links**.

Expulsion fuse links are an effective way of protecting overhead distribution lines and transformers. They are designed for outdoor use only and comprise a tin or copper fuse element in series with a flexible braid in a tube. The tube forms one side of a triangle, with a latched connection at the top and a hinge at the bottom. The braid emerges from one end of the fuse link and is held in tension by a spring downwards under gravity. Under fault conditions, the fuse link swings downwards, the arc is lengthened, extinguished and prevented from restriking.

Thermal Effects of Low Overload Faults

During overload faults lasting a long time, it is possible for medium voltage (MV) elements to get very hot prior to actually melting. Given that silver has a melting temperature of 960°C, for fuse links with no temperature limitation, this can result in a fuse barrel temperature of over 400°C and 180°C at the insulating surface surrounding the fuse. To prevent deterioration of the insulation and to the fuse link itself, all MV fuse links should incorporate some form of technology to limit the thermal stress-heating, that is possible under prolonged low overload faults, often referred to as temperature limiting technology.

Since the launch of its first MV fuse links almost half a century ago, Cooper Bussmann has employed **M-effect technology** to achieve **temperature limitation** throughout its MV fuse link range. A small mass of special low melting point alloy is added to each fuse element, this has the effect of drastically reducing the temperature of the MV fuse link during operation. The larger cross section of the fuse link elements, made possible by use of this feature, ensures cooler running and lower power dissipation under normal service conditions than comparable temperature limitation technology.

Other manufacturers employ a temperature-limiting (or thermal) striker to overcome their overheating problems. In general with this approach the maximum temperatures reached by the fuse link and its surrounding insulation are not as low as with the use of M-effect. Such a solution is no more effective than use of M-effect on the fuse link elements and moreover does not bring the additional advantages of lower watts loss, cooler running and greater withstand against transient surge currents.

When a Cooper Bussmann fuse link operates under low overload fault conditions the maximum temperature rise of the fuse link is such that the temperature of the surrounding synthetic insulation remains below the temperature limits for all insulated fuse switchgear. The fuse barrel therefore remains intact and the fuse carrier and its contacts remain unimpaired.

Typically a Cooper Bussmann MV fuse link of a given rating may run 10-30°C cooler than comparable fuse links which do not employ M-effect. This advantage is particularly useful when the MV fuse link is used in totally enclosed all insulated switchgear, such as cast resin fuse-switches or compact SF6 insulated Ring Main Units (RMUs), or GIS HV switchgear, since less derating is required and hence a smaller rating of MV fuse link will do the same job as a higher rated MV fuse link from another manufacturer.

In short M-effect fuse links are generally safer, give better protection and are longer lasting than alternative designs, which do not employ these valuable features.

How to Order - Ordering Key

Symbol							Meaning
1	2	3	4	5	6	7	
x							Rated voltage of the fuse link in kV
	x						The type of fuse link given by a single letter
		x					Diameter of the fuse link barrel (in mm) denoted by a letter
			x				Length of the fuse link barrel (in mm) denoted by a letter
				x			Striker information: type of striker is denoted by a letter *
					x		Tag information: type denoted by a letter
						x	Current rating of the fuse link given in amperes

1 > Voltage

4 > Barrel length

*S = Spring striker 50N

2 > Type designation letter

5 > Striker information*

* E = Spring striker 80N

3 > Barrel diameter

6 > Tag information

* N = No striker fitted

* H or M = Pyrotechnic striker

Example: 12TDLEJ50

Ordering Code Information	Type Designation						
Rated voltage of the fuse link	12						
Type of fuse link		T					
Body diameter			D				
Body length				L			
Type of striker					E		
Type of tag						J	
Current rating							50
Complete part number	12	T	D	L	E	J	50

Part number **12TDLEJ50** represents an outdoor DIN fuse rated at **12kV** for use in **Air (T)** with a body diameter of **50.8mm (D)**, a barrel length of **292mm (L)**, a striker to **DIN 43625 80N (E)**, a tag arrangement to **DIN 43625 (J)** and an Amp rating of **50A**.

How to Order - Parts Referencing System

kV	1st Letter General Type	2nd Letter Barrel Diameter (mm)	3rd Letter Barrel Length (mm)	4th Letter Striker (mm)	5th/6th letter and or digit - termination or fixing	Amps A
	A, B, D, N = fuse links for use in air	M = 20.6	U = 86	S = Striker to DIN43625, form C 50N	A = No Tags. Ferrule diameter as the 2nd letter	
	V, W = fuse links primarily for use in motor circuits	B = 25.4	W = 142	E = Striker to DIN43625, 80N	B = Offset tag, single bolt fixing	
	F = fuse links with full range characteristics	D = 50.8	O = 192	H, M = Striker to BS2692-1	C, D = Tags to BS2692-1	
	O = fuse links sealed for use in oil switches	E, H, L = 63.5	C = 195	N = None fitted	F = Offset tag, double bolt fixing	
	T = DIN outdoor range	F, I, K = 76.2	D = 203		J = Ferrule to DIN 43625	
		X = 88	F = 254		O = Tags to BS2692-1	
			L = 292		6 = Tags to BS2692-1	
			G = 359		22 = 5/16-BSW stud one end only	
			N = 403		02, 03 = Double and triple barrel fuse link	
			M = 442		F2, F3 = Double and triple barrel fuse link	
			Q = 537			
			I = 565			
			K = 914			

Note:

Most of these fuse types are suitable for outdoor use. A variety of alternative tag arrangements are also available, details on request from Cooper Bussmann application engineers buletechnical@cooperindustries.com.

Introduction to DIN Medium Voltage Fuse Links

- Fuse links comply with DIN dimensional standard DIN 43625.
- 'F' Range, high performance full range fuse links.
- 'T' Range, high performance back-up fuse links, with striker tripping.
- 'A' Range, including high current rating back-up fuse link.
- Comply with IEC 60282-1 and VDE 0670 part 4.
- Wide variety of ratings, 3.6kV to 36kV.
- 'T' Range is suitable for outdoor use.
- Motor circuit fuse link option, see motor fuse links section page 25.

Cooper Bussmann 'T' Range

The Cooper Bussmann 'T' range medium voltage current-limiting fuse links to dimensional standard DIN 43625, are one of the most advanced design of medium voltage fuse links available anywhere in the world today. Developed by Cooper Bussmann, they comply with the very latest requirements of IEC 60282-1, are lead and cadmium free (meeting the RoHS and WEE directives) and have been designed to meet current and future global electrical utility specifications.

The 'T' range offers **time-current characteristics** that are **optimised** to improve discrimination with upstream devices, giving fast clearance of earth faults in secondary terminal zones. The fuse links utilise Cooper Bussmann M-effect technology, ensuring low power consumption during operation, while at the same time providing **temperature limitation in the event of an overload fault**.

The fuse links are suitable for both indoor and outdoor applications and are fitted with a spring striker. This gives either an output force of 80N with a travel of 30mm in the case of fuse links with part number sequence '**E**', or in the case of part number referring to '**S**', a spring striker with an output force of 50N and a maximum travel of 26mm.

Cooper Bussmann 'F' Range

The 'F' range fuse links have 'full range' clearing capability. Cooper Bussmann 'F' fuse links types are designed to clear low overloads right down to the fuse links' rated current in accordance with latest IEC 60282-1 requirements. They are thus suitable for use as a sole form of protection. 'F' range time-current characteristics are especially advantageous for transformer protection applications.

Cooper Bussmann 'A' Range

This earlier, well proven, design has values of minimum breaking current between the 'T' and 'F' range including higher current ratings.

Applications

MV DIN fuse links are suitable for primary side transformer protection, fuse switch combination unit, fuse bases and fuse switches.

Features & Benefits

Certification. The Cooper Bussmann Medium Voltage (MV) DIN range of fuse links has been fully tested and certified. Interrupting performance has been certified at the world class independent test laboratories of KEMA. All other performance requirements such as temperature-rise, time-current characteristics, weather sealing etc. have been thoroughly tested to ASTA approval procedures.

All Cooper Bussmann medium voltage DIN fuse links exhibit **cool running and low power dissipation** during normal operation in service. The use of **M-effect (as already explained), drastically reduces the temperature of the fuse link during operation.** The larger cross section of the fuse link elements made possible by using M-effect ensures cooler running and low power dissipation under normal service conditions. **This ensures maximum levels of network efficiency by reducing unnecessary power loss** and minimizing switchgear wear and tear due to the fact the fuse link is running much cooler during its service life.

Cool operation. When Cooper Bussmann MV fuse links operate under low fault conditions, the maximum temperature rise of the fuse link is well within the temperature limits for all switchgear due to the use of M-effect, ensuring fuse carrier contacts remain unimpaired, thereby **increasing the life cycle of the substation** and so **reducing capital and maintenance costs.**

Silver elements. All Cooper Bussmann Back-Up MV fuse links use 99.8% pure silver in their elements, ensuring high conductivity and **low power (revenue) loss, maximising network efficiency.**

Reduced nuisance operation due to surge currents. The use of M-effect allows a larger element cross section for a given current rating, **improving withstand capability** against transient overcurrents due to transformer magnetizing inrush current, reducing mal operation. **This improves system reliability reducing maintenance costs.**

Low arc voltages during short-circuit operation. Cooper Bussmann MV fuse links are designed to produce low levels of arc voltage, allowing fuse link **to be used down to half their rated voltage**, so during short-circuit operation, the switchgear and cables are not unduly stressed by being exposed to high arc voltages, thereby **prolonging the life of the switchgear and improving asset utilization.**

Additionally, **stock holdings and part numbers can be reduced**, as a 24kV Cooper Bussmann MV DIN fuse link can be used on a 12kV system. Utilities that run a mixed voltage network (say 24, 15.5, 13.8 12 and 10 kV) can **standardise on one type of switchgear** with one type of fuse link, **reducing costs** and **removing the need for an additional fuse extension and inventory.**

Construction. All electrical connections within the Cooper Bussmann MV fuse link are made by welded or brazed joints. This firstly ensures a **very mechanically robust fuse link** and secondly, greatly **reduces the risk of poor intermittent internal contacts, improving substation reliability.**

X-Ray. All Cooper Bussmann MV fuse links are X-rayed during production. Element alignment, M-effect position, etc are all checked by trained operators. This process ensures defects that would not normally be detected by purely visual or electrical based quality systems, to be captured during production.

Element Design. Unlike many other medium voltage fuse link manufacturers, Cooper Bussmann medium voltage fuse elements employ a “neck” or ‘notch’ design principle as opposed to a perforated element design principle, see diagram below.

This element design insures that even the smallest degree of accidental element damage is easily detected during testing, as part of the manufacturing process thus avoids the possibility of such imperfect fuses being put into service. This is far more difficult to achieve with perforated element designs.

Lead and Cadmium Free. All Cooper Bussmann ‘T’ Ranges fuse links are lead and cadmium free and meet with the latest WEEE and RoHS directives. RoHS is less than 1000Vac.

Recycling Scheme. Cooper Bussmann operates a recycling scheme for all medium voltage fuse links, please contact buletechnical@cooperindustries.com for further information.

General Guide to the Selection of DIN Back-Up Fuse Links

Back-Up Fuse Links

	800	100	100	45	45	800
	1000	100	100	-	-	1000

- Selection of these MV fuse links has been based on the following:
 - 1 - The fuse link should withstand transformer magnetising inrush currents, taken as 12 times full load current for 0.1 seconds.
 - 2 - The fuse link should discriminate with the rating of the secondary fuse link stated or where only individual cable exit protection exists, the highest LV fuse link rating likely to be used.
 - 3 - The fuse link should operate within two seconds for transformers complying with IEC 60076-5 in respect of impedance, voltage and short-circuit withstand current.
 - 4 - The fuse link should operate reasonably quickly in the event of a transformer internal fault or an earth fault in the secondary terminal zone of the transformer.
 - 5 - In the case where there is no secondary fuse link for overload protection, the minimum recommended MV fuse link rating applies to the use of fuse links in encapsulated enclosures where permissible continuous overload is generally limited to 120% of transformer full load current. However, if greater overload currents are permissible a higher rating of fuse link may be required. Where the fuse link is used in open air or conditions of unrestricted ventilation a higher permissible overload may be possible.
 - 6 - In most cases more than one rating of MV fuse link is recommended for a particular transformer size. Choice of fuse link will then depend on which fuse link offers the best protection; e.g., having one fuse link for several transformer sizes.

Recommendations for other voltage are available on request, please email buletechnical@cooperindustries.com.

3.6kV - 'A & W' Range Current Limiting Back-Up Fuse Links

Specifications

Description: A range of medium voltage DIN fuse links, complete with striker, suitable for transformer protection. The fuse links can be used even when there is no secondary low voltage protection, provided they are used with fuse switches fitted with instantaneous striker tripping mechanism.

Ratings:

Rated Voltage: 3.6kV
 Rated Current: 6.3 - 200A
 Breaking Capacity: 40 - 50kA

Agency Information: Comply with DIN Dimensional standard DIN 43625, VDE 0670 part 4 and with IEC 60282-1 (2005).
 Suitable for indoor use.

Time-Current Curves and Cut-Off Curves: see list page 120 and data on CD at the back of the catalogue.

Dimensions (mm):

Fuse Reference	A	C	D	Weight (Kg)
ADLSJ	292	54	51	1.63
ADOSJ	192	54	51	1.1
WDOSJ	192	54	51	1.1
WFOSJ	192	76	76	2.1

Features and Benefits

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *Silver elements* ensuring high conductivity and low power (revenue) loss
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

Typical Applications

- Primary side transformer protection
- Used in fuse switch combination unit
- Used in fuse bases
- Used in fuse switches

Data Sheet 720102

7.2kV - 'T' Range Current Limiting Back-Up Fuse Links

Specifications

Description: A range of medium voltage DIN fuse links complete with striker, suitable for transformer protection. The fuses can be used even when there is no secondary low voltage protection, provided they are used with fuse switches fitted with instantaneous striker tripping.

Ratings:

Rated Voltage: 3.0 - 7.2kV
 Rated Current: 6.3 - 160A
 Breaking Capacity: 40kA

Agency Information: Comply with DIN Dimensional standard DIN 43625, VDE 0670 part 4 and with IEC 60282-1 (2005). Suitable for indoor and outdoor use.

Time-Current Curves and Cut-Off Curves: see list page 120 and data on CD at the back of the catalogue.

Dimensions (mm):

Fuse Reference	A	C	D	Weight (Kg)
TDLSJ	292	54	51	1.63
TFLSJ	292	80	76	3.1

Features and Benefits

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *Silver elements* ensuring high conductivity and low power (revenue) loss
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

Typical Applications

- Primary side transformer protection
- Used in fuse switch combination unit
- Used in fuse bases
- Used in fuse switches

12kV - 'F' Range Current Limiting Full Range Fuse Links

Specifications

Description: A range of medium voltage DIN fuse links, complete with sealed striker, suitable for transformer protection. Cooper Bussmann 'F' range provide full range protection.

Ratings:

Rated Voltage: 12kV
Rated Current: 6.3 - 100A
Breaking Capacity: 50kA

Agency Information: Comply with DIN Dimensional standard DIN 43625, VDE 0670 part 4, VDE 0670 part 402 and with IEC 60282-1 (2005)
Suitable for indoor use.

Time-Current Curves and Cut-Off Curves: see list page 120 and data on CD at the back of the catalogue.

Dimensions (mm):

Fuse Reference	A	C	D	Weight (Kg)
FDLSJ	292	54	51	1.63
FFLSJ	292	80	76	3.16
FXLSJ	292	92	88	4

Features and Benefits

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *Silver elements* ensuring high conductivity and low power (revenue) loss
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained
- Our Full Range MV fuse links can interrupt any current below the rated breaking capacity.

Typical Applications

- Primary side transformer protection
- Used in fuse switch combination unit
- Used in fuse bases without instantaneous striker tripping
- Used in fuse switches

24kV - 'F' Range Current Limiting Full Range Fuse Links

Specifications

Description: A range of medium voltage DIN fuse links, complete with sealed striker, suitable for transformer protection. Cooper Bussmann 'F' range provide full range protection.

Ratings:

Rated Voltage: 24kV
 Rated Current: 6.3 - 45A
 Breaking Capacity: 35.5kA

Agency Information: Comply with DIN Dimensional standard DIN 43625, VDE 0670 part 4, VDE 0670 part 402 and with IEC 60282-1 (2005). Suitable for indoor use.

Time-Current Curves and Cut-Off Curves: see list page 120 and data on CD at the back of the catalogue.

Dimensions (mm):

Fuse Reference	A	C	D	Weight (Kg)
FDMSJ	442	54	51	2.2
FFMSJ	442	67	76	4.5

Features and Benefits

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *Silver elements* ensuring high conductivity and low power (revenue) loss
- *100% X-ray*, all our high voltage fuse links are X-rayed ensuring the highest possible standards are maintained
- Our Full Range MV fuse links can interrupt any current below the rated breaking capacity.

Typical Applications

- Primary side transformer protection
- Used in fuse switch combination unit
- Used in fuse bases without instantaneous striker tripping
- Used in fuse switches

24kV - 'A' and 'T' Range Current Limiting Back-Up Fuse Links

Specifications

Description: A range of medium voltage DIN fuse links, complete with sealed striker, suitable for transformer protection. The fuse links can be used even when there is no secondary low voltage protection, provided they are used with fuse switches fitted with instantaneous striking.

Ratings:

Rated Voltage: 12 - 24kV
 Rated Current: 6.3 - 160A
 Breaking Capacity: 20 - 63kA

Agency Information: Comply with DIN Dimensional standard DIN 43625, VDE 0670 part 4, VDE 0670 part 402 and with IEC 60282-1 (2005).

'A' range is suitable for indoor use.

'T' range is suitable for indoor and outdoor use .

Time-Current Curves and Cut-Off Curves: see list page 120 and data on CD at the back of the catalogue.

Dimensions (mm):

Fuse Reference	A	C	D	Weight (Kg)
AFMSJ	442	79	76	4.5
AIMSJ	442	79	76	4.5
TDMEJ	442	54	51	2.5
THMEJ	442	67	64	3.7
TFMEJ	442	80	76	5.1
TXMEJ	442	91	88	5.9

Features and Benefits

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *Silver elements* ensuring high conductivity and low power (revenue) loss
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

Typical Applications

- Primary side transformer protection
- Used in fuse switch combination unit
- Used in fuse bases
- Used in fuse switches

Introduction to Medium Voltage Motor Fuse Links

- Motor Fuse Links comply with IEC 60282-1, IEC 644 and BS 5907.
- Available in DIN 43625 and BS 2692 dimensions.
- Sold in a wide range of ratings from:
 - 3.6kV - 5 to 450A
 - 7.2kV - 5 to 355A
- North American dimensioned products also available, 2R to 24R ratings.

Cooper Bussmann Motor Fuse Links

Cooper Bussmann range of motor fuse links are designed to meet the specific requirements necessary for motor protection. During the starting cycle of direct on-line motors, the fuse elements will reach a considerably higher temperature than during normal operation; this is due to the high amount of current the motor will draw as it starts, typically, 6 times its normal load current value. This results in expansion and contraction of the fuse elements and could cause premature operation of the fuse link. Cooper Bussmann motor fuse links encompass an advanced design to minimise this effect. This therefore, negates the need to over specify the fuse rating due to high values of motor starting current.

Cooper Bussmann fuse links operate extremely quickly under heavy fault currents, resulting from the time-current characteristic. Low power dissipation ensures low temperature rise, important in multi-tier starters for example. Switching (Arc) voltages are lower than permitted values, therefore, 5.5kV fuse links are also suitable for 4.8kV and 2.4kV circuits.

Application

Fuse links provide short-circuit protection in motor circuits to both the motor starter and cables from the starter to the motor. Overload protection is provided by the motor starter, generally by an overload relay and contactor. Combination striker tripping may also form part of the associated equipment which houses the fuse links and motor starters.

Application Procedure

For any motor the fuse current rating is determined by magnitude and duration of starting current, except in a few situations where the starting currents are very light.

Introduction to Medium Voltage Motor Fuse Links

Direct-on-Line Starting

In the absence of specific information, the starting current can usually be taken to be six times the motor's full load current. The starting time will depend on the type of the drive but will be approximately as follows:

Pump motors - 6 seconds

Mill motors - 10 to 15 seconds

Fan motors - 60 seconds

These are average values and the appropriate figures for starting current and starting time for actual installation should be obtained wherever possible.

Multiply the starting current by 1.7 and using this value of current and the starting time, (it is recommended that a minimum time of five seconds be adopted), plot this point on the time-current characteristics of the fuse link. The correct current rating of the fuse link is then chosen as being the one immediately to the right of the point plotted. The chosen fuse link must also have a current rating of at least 1.3 times the full load current of the associated motor.

The rating chosen will be adequate for normal applications where the associated motor is not started more than twice in a given period of one hour.

For applications using more frequent starting duties, a greater derating factor must be applied as shown below:

- Maximum 2 starts per hour - Derating factor 1.7
- Maximum 4 starts per hour - Derating factor 1.9
- Maximum 8 starts per hour - Derating factor 2.1
- Maximum 16 starts per hour - Derating factor 2.4

Assisted Starting

A similar method of fuse selection may be used as for direct-on-line starting (see above), but it must be noted that the normal running current of the motor is likely to be closer in value to the nominal current rating of the fuse link than for direct-on-line applications.

The rating of fuse link chosen will need to be appreciably greater than the motor running current to allow for restricted cooling inside control gear cubicles, particularly where multi-tier starters are involved. In case of doubt refer to Cooper Bussmann for further guidance.

Notes

For applications involving more frequent starting duties than 16 times per hour or where unusual duty cycles are involved, consult Cooper Bussmann application engineers for advice: buletechnical@cooperindustries.com or 00 44 (0) 1509 882 699.

3.6kV - Motor Fuse Links to British Standard Dimensions

Specifications

Description: Motor fuse links providing short circuit protection in motor circuits to both the motor starter and cables from the starter to the motor.

Ratings:

Rated Voltage: 3.6kV
 Rated Current: 5 - 450A
 Breaking Capacity: 50kA

Agency Information: BS 2692-1

Time-Current Curves and Cut-Off Curves: see list page 120 and data on CD at the back of the catalogue.

Higher ratings than those listed above can be obtained by using fuse links connected in parallel. Special fixing arrangements for connecting up to three fuse links in parallel are available. Please contact Cooper Bussmann application engineers buletechnical@cooperindustries.com for more details. The code designations for these arrangements are given in "How to order" page 7 and 8.

7.2kV - Motor Fuse Links to British Standard Dimensions

Specifications

Description: Motor fuse links providing short circuit protection in motor circuits to both the motor starter and cables from the starter to the motor.

Ratings:

Rated Voltage: 7.2kV
 Rated Current: 25 - 315A
 Breaking Capacity: 40kA

Agency Information: Comply with BS 2692-1.

Time-Current Curves and Cut-Off Curves: see list page 120 and data on CD at the back of the catalogue.

Dimensions

Fuse Link Type	A	B	C	D
WFNHO	486	454	403	76
WKNHO	486	454	403	76

Higher ratings than those listed above can be obtained by using fuse links connected in parallel. Special fixing arrangements for connecting up to three fuse links in parallel are available. Please contact Cooper Bussmann application engineers buletechnical@cooperindustries.com for more details. The code designations for these arrangements are given in "How to order" page 7 and 8.

3.6kV - Motor Fuse Links to DIN Standard Dimensions

Specifications

Description: Motor fuse links providing short circuit protection in motor circuits to both the motor starter and cables from the starter to the motor.

Ratings:

Rated Voltage: 3.6kV
 Rated Current: 50 - 400A
 Breaking Capacity: 50kA

Agency Information: Comply with IEC 60282-1, VDE 0670 part 4 and DIN Dimensional standard DIN 43625.

Time-Current Curves and Cut-Off Curves: see list page 120 and data on CD at the back of the catalogue.

Dimensions (mm):

Fuse link reference	Length (A) mm	Diameter (D) mm	Weight Kg
WDOS	192	51	1.1
WFOS	192	76	2.1
WDLS	292	51	1.63
WFLS	292	76	3.16
WKLS	292	76	3.16

Features and Benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect.
- Silver elements ensuring high conductivity and low power (revenue) loss
- 100% X-ray, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained
- Allows motor start current to pass on without degradation of fuse link

Typical Applications

- Motor protection

7.2kV - Motor Fuse Links to DIN Standard Dimensions

Specifications

Description: Motor fuse links providing short circuit protection in motor circuits to both the motor starter and cables from the starter to the motor.

Ratings:

Rated Voltage: 7.2kV
 Rated Current: 25 - 355A
 Breaking Capacity: 63kA

Agency Information: Comply with IEC 60282-1, VDE 0670 part 4 and DIN Dimensional standard DIN 43625.

Time-Current Curves and Cut-Off Curves: see list page 120 and data on CD at the back of the catalogue.

Dimensions (mm):

Fuse link reference	Length (A) mm	Diameter (D) mm	Weight Kg
WFMS	442	76	5.2

Introduction to Medium Voltage and Auxiliary Transformer Fuse Links

- British Standard Voltage and Auxiliary Transformer (VT) fuse links.
- A range of voltage transformer primary fuse links to BS 2692-1 and IEC 60282-1.
- Wide range of ratings from 1kV to 36kV.
- 3.15 Amp industry standard current ratings.
- CAV range with ratings from 3.6kV to 38kV.

Cooper Bussmann Voltage and Auxiliary Transformer Fuse Links

Cooper Bussmann manufactures a wide range of voltage transformer (VT) fuse links. In North America they are referred to as Potential Transformer fuse links. These fuse links are designed for use in the primary side of voltage transformers to provide system isolation in the event of faults occurring in the transformer circuit.

Voltage transformer fuse links have a preferred current rating of 3.15A. Experience has shown that there is a risk of spurious operation by transient overcurrents where lower current ratings are used. In addition, in order to minimise the risk of deterioration of the fine fuse elements caused by corona, it is desirable to mount the fuse links so that the earthed metal is not in the immediate vicinity of the part of the barrel between the ferrules.

Higher current and 'E' ratings are available for special applications, including auxiliary transformers.

A range of VT fuse links with a breaking capacity of 200kA for use at the output terminals of large turbo alternators can also be ordered. For further information, please contact Cooper Bussmann application engineers: buletechnical@cooperindustries.com.

Types prefixed 'A' or 'N' are suitable for use indoors in air only. Types prefixed 'O' may be used under oil.

Application

Small rated fuse links for protection of voltage and auxiliary transformers. Back-up protection up to 3.15A and voltages from 1.1kV to 36kV.

1.1kV - Voltage and Auxiliary Transformer Fuse Links

Specifications

Description: Voltage transformer fuse links

Ratings:

Rated Voltage: 1.1kV
 Rated Current: 2 - 6.3A
 Breaking Capacity: 50kA

Agency Information: Comply with BS 2692-1 and IEC 60282-1

Time-Current Curves and Cut-Off Curves: see list page 120 and data on CD at the back of the catalogue.

Dimensions (mm):

Fuse link reference	A (mm)	B (mm)	D (mm)
NBUN	86	17.5	25.4

Ferrule fuse links tag type 'A' shown in full lines and '22': tag shown in dotted lines

Part Numbers

Part Number	Rated Current I_n (A)	Breaking Capacity I_1 (kA)	Cold Resistance $m\Omega$	Joule Integral (I^2t)		Length mm	Diameter mm	Weight kg

OBWN*	142	30	25.4

Features and Benefits

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *Silver elements* ensuring high conductivity and low power (revenue) loss
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

Typical Applications

- Protection of auxiliary transformers

12kV - Voltage and Auxiliary Transformer Fuse Links

Specifications

Description: Voltage transformer fuse links

Ratings:

Rated Voltage: 12kV
 Rated Current: 3.15A
 Breaking Capacity: 45kA

Agency Information: Comply with BS 2692-1 and IEC 60282-1

Time-Current Curves and Cut-Off Curves: see list page 120 and data on CD at the back of the catalogue.

Dimensions (mm):

Fuse link reference	A mm	B mm	D mm
ABCN*	195	30	25.4
OBCN*	195	30	25.4

Ferrule fuse links tag type 'A' shown in full lines and '22': tag shown in dotted lines

Part Numbers

Part Number	Rated Current I_n (A)	Breaking Capacity I_1 (kA)	Cold Resistance $m\Omega$	Joule Integral (I^2t)		Length mm	Diameter mm	Weight kg
				Minimum Pre-Arcing	Maximum Operating

Features and Benefits

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *Silver elements* ensuring high conductivity and low power (revenue) loss
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

Typical Applications

- Protection of auxiliary transformers

15.5kV - Voltage and Auxiliary Transformer Fuse Links

Specifications

Description: Voltage transformer fuse links

Ratings:

Rated Voltage: 15.5kV
 Rated Current: 3.15A
 Breaking Capacity: 32kA

Agency Information: Comply with BS 2692 and IEC 60282-1

Time-Current Curves and Cut-Off Curves: see list page 120 and data on CD at the back of the catalogue.

Dimensions (mm):

Fuse link reference	A mm	B mm	D mm
ABFN*	254	30	25.4
OBFN*	254	30	25.4

Features and Benefits

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *Silver elements* ensuring high conductivity and low power (revenue) loss
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

* The last letter of the ordering code on these items is normally either "A" or "22", please refer to how to order page 7 and 8.

Features and Benefits

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *Silver elements* ensuring high conductivity and low power (revenue) loss
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

Typical Applications

- Protection of auxiliary transformers

3.6kV - Voltage and Auxiliary Transformer Type CAV Fuse Links

Specifications

Description: Voltage transformer fuse links

Ratings:

Rated Voltage: 3.6kV
 Rated Current: 2A
 Breaking Capacity: 50kA

Agency Information: Comply with IEC 60282-1

Time-Current Curves and Cut-Off Curves: see list page 120 and data on CD at the back of the catalogue.

Dimensions (mm):

Fuse link reference	Length A mm
3.6CAV	220

Features and Benefits

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *Silver elements* ensuring high conductivity and low power (revenue) loss
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

Typical Applications

- Protection of auxiliary transformers

Part Numbers

Part Number	Rated Current I_n (A)	Breaking Capacity I_1 (kA)	Cold Resistance $m\Omega$	Joule Integral (I^2t)		Length mm	Diameter mm	Weight kg

5.5kV - Voltage and Auxiliary Transformer Type CAV Fuse Links

Specifications

Description: Voltage transformer fuse links

Ratings:

Rated Voltage: 5.5kV
 Rated Current: 0.5 - 15A
 Breaking Capacity: 50kA

Agency Information: Comply with IEC 60282-1

Time-Current Curves and Cut-Off Curves: see list page 120 and data on CD at the back of the catalogue.

Dimensions (mm):

Fuse link reference	Length A mm
CAV and CAVH	187

Features and Benefits

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *Silver elements* ensuring high conductivity and low power (revenue) loss
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

Typical Applications

- Protection of auxiliary transformers

Shown with striker fitted.

Part Numbers

Part Number	Rated Current I_n (A)	Breaking Capacity I_1 (kA)	Cold Resistance $m\Omega$	Joule Integral (I^2t)		Length mm	Diameter mm	Weight kg

Medium Voltage Oil Fuse Links

Introduction to Current Limiting Fuse Links for Use in Oil Switchgear... 56

British Standard

3.6kV.....	57
7.2kV.....	58
12kV	59
15.5kV.....	60
17.5kV.....	61
24kV.....	62

Introduction to Current Limiting Fuse Links for Use in Oil Switchgear

- Fuse Links comply with IEC 60282-1, BS 2692-1 and ESI standard 12-8.
- 7.2 and 12kV Fuse links tested at highest system voltage and approved by the UK Electricity Association approvals panel.
- Voltage ranges from 3.6 to 24kV.
- Fitted with powerful pyrotechnic striker pin.

Cooper Bussmann Under Oil Fuse Links

Cooper Bussmann range of oil tight fuse links are designed for use in oil filled switchgear. This type was pioneered in the UK. Cooper Bussmann range has been in continuous manufacture for almost 40 years, being by far the most widely used device of its kind in the world. Over 1,000,000 Cooper Bussmann branded fuse links have been put into service without a single reported case of oil ingress. A unique triple seal system ensures against long term seal deterioration. Low power dissipation ensures long running in oil filled switchgear.

Application

Oil medium voltage fuse links are suitable for primary side transformer protection and oil filled switch combination unit. *The range is not suitable for use inside oil filled transformer tanks where high oil temperatures may be expected.*

Application Procedure

For any transformer the fuse current rating is determined by magnitude and duration of inrush current.

General Guide to the Selection of Oil Tight Fuse Links for Use in Primary Circuit of Three Phase Transformers

Selection of these fuse links has been based on a compromise between the following:

- 1 - Withstand against magnetising inrush current is taken as 12 times full-load current for 0.1 second.
- 2 - Withstand against 150% permissible overload current. Recommendations marked with the following:
 - * Limited to permissible overload of 130%
 - ** Permits use of a 12kV OHFMA 80A fuse link with a 1000kVA transformer where permissible overload does not exceed 130%.
- 3 - For 6.6kV systems, 12kV fuse links are recommended where possible in the interests of standardisation.
- 4 - Wherever possible, 254mm long fuse links are offered rather than equivalent 359mm types
- 5 - The above recommendations are not generally applicable to transformers feeding motor circuits with starting currents in excess of the transformer full load current. In this event please consult Cooper Bussmann application engineers: buletechnical@cooperindustries.com.

3.6kV - British Standard Oil Tight Fuse Links

Specifications

Description: Oil tight fuse links

Ratings:

Rated Voltage: 3.6kV
 Rated Current: 6.3 - 250A
 Breaking Capacity: 50kA

Agency Information: Comply with IEC 60282-1, BS 2692-1 and ESI standard 12-8

Time-Current Curves and Cut-Off Curves: see list page 121 and data on CD at the back of the catalogue.

Dimensions (mm):

Features and Benefits

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *Silver elements* ensuring high conductivity and low power (revenue) loss
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

Typical Applications

- Primary side transformer protection
- Oil filled fuse switch combination unit

The range is not suitable for use inside oil filled transformer tanks where high oil temperatures may be expected

Medium Voltage British Standard Air Fuse Links

Introduction to Current Limiting Fuse Links for Use in Air.....	64 - 65
British Standard	
3.6kV.....	66 - 67
7.2kV.....	68 - 69
12kV.....	70 - 71
15.5kV.....	72
24kV.....	73
36kV.....	74
72.5kV.....	75

Introduction to Current Limiting Fuse Links for Use in Air

- Medium Voltage fuse links for use in Air, comply with BS 2962-1 dimensions.
- Available in voltage from 3.6kV to 72.5kV.
- Full range performance option available at 12kV and 24kV.
- Wide variety of fixing arrangements available.
- Powerful pyrotechnic striker fitted.
- E-rated North American dimension products also available.
- Suitable for indoor and outdoor use.

Cooper Bussmann Fuse Links for Use in Air

The Cooper Bussmann range of fuse links for use in air are available in British Standard form, BS 2692, Part 1 1975. A number of options are available, including full range capability, and alternative fixing arrangements such as different types of tags, studs and collars etc. Details are available on application. Higher current ratings can be obtained by using fuse links in parallel and special fixing arrangements are available for this purpose.

Cooper Bussmann - USA Dimensions

A comprehensive range of 'E' rated North American Dimension fuse links for industrial applications is also available. These are the latest technology full range fuse links in USA Industrial Standard 2 inch and 3 inch diameter ferrule style. Extended ratings in double barrel assemblies; striker, indicator and tag versions are also available, see page 76 to 93.

Application

Air fuse links are suitable for primary side transformer protection, fuse switch combination unit, fuse bases and fuse switches.

General Guide to the Selection of Air Fuse Links for use in the Primary Circuit of Three Phase Transformers

1500	BFG	160*	7.2	AKG	125*	12	-	-	-

Selection of fuse these links has been based on a compromise between the following:

- 1 - The fuse links should withstand transformer magnetising inrush currents, taken as 12 times full load current for 0.1 seconds.
- 2 - The fuse links should discriminate with the highest rating of secondary fuse links
- 3 - The fuse links should withstand periodic overcurrents of up to 150% of transformer fuse load current
- 4 - The fuse links should operate reasonably quickly in the event of a transformer inter-turn fault or a fault in the secondary terminal zone of the transformer

Notes

a) The above recommendations are not generally applicable to transformers feeding motor circuits with starting currents in excess of the rated current fuse. In this event, please consult Cooper Bussmann application engineers.

b) For 6.6kV transformers, 12kV fuse links are recommended, where the required current rating is available.

* Where the transformer is not subjected to periodic overcurrents, a lower fuse rating may be suitable, fuse ratings marked with “*”, are only suitable for use with the transformer sizes quoted, where significant over loading does not occur.

Fuse links for use in transformers with primary voltages of 3.3, 22 and 33kV are available, please consult Cooper Bussmann application engineers for further details buletechnical@cooperindustries.com.

3.6kV - British Standard Air Fuse Links

Specifications

Description: Air fuse links

Ratings:

Rated Voltage: 3.6kV
 Rated Current: 6.3 - 100A
 Breaking Capacity: 25 - 40kA

Agency Information: comply with BS 2962-1 dimensions

Time-Current Curves and Cut-Off Curves: see list page 121 and data on CD at the back of the catalogue.

Dimensions (mm):

Tags Type	Code	A	B	C	Dø
A	ADGHA	359	N/A	N/A	51
C & D	ADFHC	356	314	254	51
	ADGHC	461	419	359	51
F	ADFHF	356	314	254	51
	ADGHF	461	419	359	51

Features and Benefits

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *Silver elements* ensuring high conductivity and low power (revenue) loss
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

Typical Applications

- Primary side transformer protection
- Used in fuse switch combination unit
- Used in fuse bases
- Used in fuse switches

* The fifth letter or number of the part reference denotes the end fixing arrangement.

There are a wide variety of end terminations available, the most popular types, some of which have dimensional references to BS2692: Part 1, are:

BDGHC: C Special offset tags, two hole fixings for Brush fuse switch equipment, BS Ref TA3

BDGHA: A No tags - Ferrule - BS Ref. FA3 ADIHA / BS Ref FA4 AFIHA / BS Ref FA5 - AFKHA

BDGHF: F Offset tags two bolt fixing

BFGHA: A No tags - Ferrule - BS Ref. FA3 ADIHA / BS Ref FA4 AFIHA / BS Ref FA5 - AFKHA

BFGHF: F Offset tags two bolt fixing

Other tag variants available please consult Cooper Bussmann application engineers.

24kV - British Standard Air Fuse Links

Specifications

Description: Air fuse links

Ratings:

Rated Voltage: 24kV

Rated Current: 6.3 - 90A

Breaking Capacity: 12 - 35.5kA

Agency Information: comply with BS 2962-1 dimensions

Time-Current Curves and Cut-Off Curves: see list page 121 and data on CD at the back of the catalogue.

Dimensions (mm):

Tags Type	Code	A	Dø
A	ADIHA	565	51
	FDIHA	565	51
	AFIHA	565	76

A Tags

Features and Benefits

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *Silver elements* ensuring high conductivity and low power (revenue) loss
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

Typical Applications

- Primary side transformer protection
- Used in fuse switch combination unit
- Used in fuse bases
- Used in fuse switches

5.5kV to 38kV E-Rated DIN Fuse Links

Specifications

Description: DIN dimensional E-Rated power fuse links with striker fitted for indoor use.

Agency: Meets E requirements per ANSI C37.46, meets General Purpose and Full Range requirements per ANSI C37.40.

Ratings:

Rated Voltage: 5.5 - 38kV

Rated Current: 10 - 450E

IR: 25 - 65kA

Time-Current Curves and Cut-Off Curves: see list page 121 and data on CD at the back of the catalogue.

Dimensions:

Features and Benefits:

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

Typical Applications:

- Medium voltage transformer primary protection.
- Medium voltage feeder circuit protection.

5.5kV E-Rated Fuse Links for Transformers and Feeder protection

Specifications

Description: E-Rated power fuse links having full range clearing capability for medium voltage transformer circuit protection.

Ratings:

Rated Voltage: 5.5kV
 Rated Current: 5 - 450E
 IR: 50kA

Time-Current Curves and Cut-Off Curves: see list page 121 and data on CD at the back of the catalogue.

Dimensions: See outline drawings below and part numbers page 80.

Features and Benefits:

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

Typical Applications:

- Medium voltage transformer primary protection.
- Medium voltage feeder circuit protection.

* These ratings are classed as back-up fuse links

8.25kV E-Rated Fuse Links for Transformers and Feeder Protection

Specifications

Description: E-Rated power fuse links having full range clearing capability for medium voltage transformer circuit protection.

Ratings:

Rated Voltage: 8.25kV
 Rated Current: 80 - 200A, 20 - 150E
 IR: 50kA

Time-Current Curves and Cut-Off Curves: see list page 121 and data on CD at the back of the catalogue.

Features and Benefits:

- *Cool running, low watts loss and power dissipation* thanks to the M-effect ensuring high levels of substation utilisation
- *100% X-ray*, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

Typical Applications:

- Medium voltage transformer primary protection.
- Medium voltage feeder circuit protection.

15.5kV E-Rated Fuse Links for Transformers and Feeder Protection

Specifications

Description: E-Rated power fuse links having full range clearing capability for medium voltage transformer circuit protection.

Ratings:

Rated Voltage: 15.5kV
 Rated Current: 5 - 200E
 IR: 50kA

Time-Current Curves and Cut-Off Curves: see list page 121 and data on CD at the back of the catalogue.

Dimensions: See outline drawings below and part numbers table opposite page.

Features and Benefits:

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation
- 100% X-ray, all our Medium Voltage fuse links are X-rayed ensuring the highest possible standards are maintained

Typical Applications:

- Medium voltage transformer primary protection.
- Medium voltage feeder circuit protection.

JCX, JCY, JCU, JCZ and JDZ E-Rated Fuse Links for Potential and Small Power Transformers

Specifications

Description: Indoor/enclosure E-rated medium voltage, current-limiting fuse links for potential & small power transformers with blown fuse link indication.

Ratings:

Rated Voltage: 2.4 - 8.3kV

Rated Current: ½ - 750A

Breaking Capacity: 40 - 63kA Sym

Features and Benefits:

- Physically dimensioned for retrofitting in existing hardware
- Open fuse indicator for ease in troubleshooting
- Full range ANSI classification

Typical Applications:

- Medium voltage transformer primary protection
- Medium voltage feeder circuit protection
- Medium voltage switches
- Medium voltage metal-enclosed switchgear

JCD, JCW, JCE, JCQ JCI, JCT E-Rated Fuse Links for Potential and Small Power Transformers

Specifications

Description: Indicating and non-indicating E-Rated medium voltage, current limiting fuse links for potential and small power transformers.

Ratings:

Rated Voltage: 2.4 - 15.5kV

Rated Current: ½ - 10A

Breaking Capacity: 25 - 80kA Sym

Typical Applications:

- Primary protection of medium voltage potential transformers.

E-Rated Fuse Links for Potential and Small Power Transformers

Specifications

Description: Indicating and non-indicating E-Rated medium voltage, current-limiting fuses for potential and small power transformers.

Ratings:

Rated Voltage: 5 - 38kV (See part numbers table for details)

Rated Current: 0.5 - 7E

Breaking Capacity: 40 - 80kA

Time-Current Curves and Cut-Off Curves: see list page 121 and data on CD at the back of the catalogue.

Typical Applications:

- Primary protection of medium voltage potential transformers.

E-Rated Fuse Links: 5.5kV CL-14 and Bolt-In

ECL055

Specifications

Description: E-Rated medium voltage, current limiting fuses for transformer and feeder protection.

Ratings:

Rated Voltage: 5.5kV E-Rated

Rated Current: 10 - 900A

Breaking Capacity: 63kA Sym. Max

Agency Information: Meets E requirements per ANSI C37.46, meets General Purpose requirements per ANSI C37.40.

Typical Applications:

- 5kV Transformer primary protection.
- 5kV Feeder circuit protection.
- 5kV Voltage switches.
- 5kV Metal-enclosed switchgear.

E-Rated Fuse Links: 8.3kV CL-14

ECL083

Specifications

Description: E-rated medium voltage, current limiting fuses for transformer and feeder protection.

Ratings:

Rated Voltage: 8.3kV E-Rated

Rated Current: 65 - 350A

Breaking Capacity: 50kA

Agency Information: Meets E requirements per ANSI C37.46, meets General Purpose requirements per ANSI C37.40.

Typical Applications:

- 8.3kV Transformer primary protection.
- 8.3kV Feeder circuit protection.
- 8.3kV Voltage switches.
- 8.3kV Metal-enclosed switchgear.

R-Rated Fuse Links for Motor Circuit Protection

Specifications

Description: Indoor/enclosure R-Rated medium voltage, current-limiting fuse links for motor circuit protection.

Ratings:

Rated Voltage: 2.4 - 7.2kV
 Rated Current: 25 - 450A
 Breaking Capacity: 50kA Sym

Agency Information: UL recognized: 2540Vac — JCK, JCK-A, 5080Vac — JCL, JCL-A, UL recognized (Guide #MSSS2, File #E96676).

Typical Applications:

- Medium voltage motor controllers.

Fuse Clips

- VT Fuse Clips for 25.4mm diameter.
- DIN standard Clips for 'F' and 'T' range fuse links.
- BS Mounting Clips suitable for 50.8mm and 76.2mm Oil, Air, and Motor Fuse Links up to 200A.

Cooper Bussmann Fuse Clips

To complement the range of tag fixings offered by Cooper Bussmann, a range of fuse clips are available. These are suitable for use with British Standard, DIN dimensioned and VT ferrule style fuse links. The BS and DIN clips are rated up to 200 Amps. They are designed to be fitted onto insulated studs or directly onto a busbar.

General Guide to the Selection of Fuse Clips

Fuse Clips	Clip Reference
DIN fuse links to 43625	270303 or A3354745
Voltage transformer and auxiliary type fuse links	A3354705
British Standard fuse links	
50.8mm (2") diameter	A3354710
63.5mm (2 1/2") diameter	A3354720
76.2mm (3") diameter	A3354730

Clips for 25.4mm VT Fuse Links

Material: Nickel silver alloy
Order as part number: A3354705

Dimensions (mm)

Fuse Clips

Clips for DIN Fuse Links

Material: Nickel-plated copper
 Order as part number: 270303
 Suitable for use with Cooper Bussmann DIN fuse links. Also suitable for use with other Cooper Bussmann fuse links having type 'J' end tags, to DIN 43625, with maximum current rating of 200 Amps

Dimensions (mm)

Clips for British Standard and DIN Style Fuse Links

Material: Nickel-plated copper
 Order as part number:
 A3354745 for 45mm diameter
 A3354710 for 50.8mm diameter
 A3354720 for 63.5mm diameter
 A3354730 for 76.2mm diameter

Dimensions (mm)

Fuse Diameter (D)	H	W	C
45	86	112	48
50.8	86	112	48
63.5	95	124	54
76.2	100	140	58

Expulsion Fuse Links for Use in High Voltage Distribution Cut-Outs

- Wide range of options available from 15kV to 72kV in ANSI T & K characteristics.
- Extra rapid option also available.

Cooper Bussmann Expulsion Fuse Links

Cooper Bussmann expulsion fuse links have been widely used throughout the world for over 40 years. They have in that time built up a formidable reputation and consistency of performance.

Cooper Bussmann expulsion fuse links are designed to be interchangeable with other types of manufacturers cut-out units and are available in several patterns.

Application

Expulsion fuse links current ratings should be selected on the basis of maximum expected transient no damage currents rather than on full load current. In addition, the selection of higher current ratings will reduce the possibility of supply interruption due to transient surges such as those due to lightning strikes (for information on our Surge Protection Device SPD, please contact buletechnical@cooperindustries.com).

Links should be handled with a reasonable degree of care when installing. Excessively rough handling may damage the element.

It is normal, under certain fault conditions, for arc extinguishing material and/or metal particles to be expelled from the fuse assembly. It is therefore recommended that reasonable precautions be taken to prevent the installation being approached by unauthorised persons.

How to order - Parts Referencing System

Rated Voltage (kV)	1st Letter Type of Current Characteristics	2nd Letter Type of Termination	Rated Current (A)
15 25 46 72	<p>T = complies with ANSI C 37-42 requirements for slow acting T characteristics</p> <p>K = complies with ANSI C 37-42 requirements for fast acting K characteristics</p> <p>XA = this type of expulsion fuse link has an extra rapid characteristic. It is suitable for applications where a high degree of system protection is required at the expense of discrimination</p> <p>S = Solid links rated at 100A are also available in both button head and universal versions for fitting into expulsion fuse carriers where required. These can be ordered in a similar way using the abbreviation S, e.g. 15SB, etc</p>	<p>B = a fixed NEMA button head link</p> <p>U = a universal link, with double tail and slip off NEMA button head</p> <p>D = double tailed link without NEMA button head</p> <p>BR = as pattern B but the button head is attached via a 1/4 UNF thread to allow use of an extension rod.</p> <p>See outline drawings opposite page for reference</p>	1, 2, 3, 4, 5, 6, 7.5, 8, 10, 12, 15, 20, 25, 30, 40, 50, 60, 65, 75, 80, 100

Thus a typical ordering reference for a 15kV NEMA type K, button head 30A fuse link would be **15KB30** expulsion fuse link.

The fuse link assembly for a given range is standard to all rated voltages. The exception is that the tail length is varied to suit the dimensions of expulsion carrier of different ratings.

Expulsion Fuse Links

Specifications

Description: Expulsion fuse links available in a wide range of options from 15kV to 72kV in ANSI T&K characteristics.

Ratings:

Rated Voltage: 15 to 72kV

Amps: 1 to 100A

Breaking Capacity: depends on voltage but is approximately 8kA

Agency Information:

Type T: complies with ANSI C37-42

Type K: complies with ANSI C37-42

Time-Current Curves and Cut-Off Curves: see list page 119 and data on CD at the back of the catalogue.

Dimensions (mm):

1-50A

60-100A

Packaging:

Up to and including 50A: 25 in a carton

From 60A to 100A: 10 in a carton

To avoid incorrect replacement the fuse links have colour coded labels:

Pink label: Type XA

Yellow label: Type K

Green label: Type T

Typical Applications:

- Primary side transformer protection
- Feeder protection
- Capacitor bank protection

Type kV	A
15kV	533 (21")
25kV	660 (26")
46kV	787 (31")
72kV	1016 (40")

Notes: Type BR is similar to button head shown, except that the button head is attached via a 1/4 UNF thread.

Tails can be cut to any length.

ASL - Automatic Sectionalising Links

- Low cost retrofit option for spur line isolation in place of existing expulsion fuse links.
- Available for up to 33kV lines.
- Standard pick-up current ratings of 20, 25, 40, 50, 63, 100 Amps.
- Other ratings up to 320 Amps available.
- Available in single or 3-phase ganged arrangements.
- Enhanced lightning immunity performance.

Cooper Bussmann Automatic Sectionalising Link ASL (Smart Links)

Cooper Bussmann low cost retrofit Automatic Sectionalising Link (ASL), represents a significant breakthrough in the field of high voltage overhead line distribution system protection. It is a completely self-contained device designed for use with multi-shot circuit breakers or auto-reclosers. The ASL was originally developed by Cooper Bussmann from invention by the Electrical Council Research Centre, now EA technology in the UK.

Cooper Bussmann ASL ensures effective overhead spur line isolation in the event of a genuine local fault, while at the same time remaining unresponsive to transient (temporary) no-damage surge currents, caused by electrical storms etc, see figure 1.

How the Sectionaliser Works

The sectionaliser houses a logic circuit in its main conductive carrying tube. This ensures the electronic circuitry is free from electrical interference, as the tube acts as an effective Faraday cage and is powered by a small current transformer mounted on the outside of the carrier tube.

Statistics show that 90% of expulsion fuse operations on spur lines are in response to transient no-damage faults and that the cost for each expulsion fuse link replacement can be of the same order as the capital cost of a complete fuse cut-out. The alternative approach favoured by some Utilities of replacing expulsion fuse links by solid links has the major disadvantage that any permanent fault on a spur line results in an outage of the whole system.

Cooper Bussmann ASL provides an economic solution to the problem, by ensuring effective spur line isolation in the event of a genuine local fault, while at the same time remaining unresponsive to transient no-damage surge currents.

Figure 1

ASL - Automatic Sectionalising Links

Sectionalising Isolating a Spur-Line Fault

Operation is accomplished by discharging a capacitor into a small chemical actuator (or 'striker') which unlatches the carrier tube and causes it to swing down. The ASL is reset by fitting a replacement actuator and re-inserting the carrier into its mount.

The logic circuit is designed to inhibit response to transformer magnetising inrush current surges and induced current waves resulting from electrical storms. Therefore, in practice any spur line fault condition which persists for a time of several seconds will operate the ASL, so isolating the spur as illustrated above. Any transient or 'no damage' current will be ignored.

Operational Sequence

The logic circuit on the printed circuit board within the ASL is powered by a small current transformer mounted on the outside of the conductive carrier tube. Under normal load conditions the printed circuit board remains inert. However, should the line current increase above a certain pre-set value (the pick-up current) the logic circuit activates. The upstream auto re-closer then opens, temporarily removing the fault from the line. The logic circuit, powered by an internal capacitor, stores the incident for around 25 seconds (the 'reclaim' time). When the upstream device re-closes, some three to ten seconds later, if the fault current is no longer in evidence, the ASL will ignore the incident and eventually reverts to an inert state again. However if the fault current (i.e. a current above the pick-up value) is still present, the logic circuit will decide that this represents a permanent fault on the spur line and will prepare to de-latch. The logic circuit is however, inhibited from operating the latch mechanism until the upstream recloser has tripped for the second time and the line current has fallen to a value of less than 300mA (the 'hold-off' current) for a period of at least 0.1 second. The ASL thus operates during the dead time of the upstream protective device and does so quietly, without sparks or ionised gas emission and without contact erosion.

ASL - Automatic Sectionalising Links

Mounting Arrangements

The contact assemblies of the ASL are adjustable to allow for use with a variety of types of expulsion fuse mount. Alternative upper contact assemblies are available. These can be either fitted to the ASL during manufacture or may be provided loose as conversion kits. ASLs can also be provided complete with suitable 'fuse mounts' where required.

Applications

The ASL must be used in conjunction with either an upstream circuit breaker having multi-shot reclose facility or an auto-recloser. In either case the dead time of the device must be appreciably less than the 25 second ASL reclaim time.

The most useful pick-up current setting is likely to be 100A. This will allow protection of spur line loads totalling up to 1000kVA 3-phase (11kV).

Where the total load is smaller and greater sensitivity to low level faults is required, one of the alternative lower settings can be supplied. It should be noted that the recommended pick-up current setting is approximately twice the value of the maximum load current of the connected downstream transformers.

ASL - Automatic Sectionalising Links

Additional information

- Response time: At inception <50ms
- Weight: 1.6kg
- Maximum recommended mounting height: 10 metres
- Hold off current: >300mA
- The three-phase version is available to suit Moris Line Equipment mounts only, ref. BR1T

Boric Acid Fuse Links

- Expulsion style fuse link complete with a single-pole porcelain fuse mount.
- Available from 17kV to 38kV, 3 to 200A.
- Can be used indoors and outdoors.
- ANSI C.37 and Australian standard AS1033.

Introduction

Cooper Bussmann BBU medium voltage Boric Acid fuse link and complementary fuse mount or cut-out package is an expulsion fuse link style fuse, complete with a single-pole porcelain fuse mount offering medium voltage protection for indoor and outdoor applications.

The fuse mount is available at either 17 or 27kV and is designed to withstand the most hazardous environmental conditions. The contact system is made from a copper alloy ensuring a long service life in the field.

The fuse mount already has the outdoor fittings, so simply adding a Cooper Bussmann BBU fuse link will deliver a complete outdoor transformer protection solution.

Cooper Bussmann range of BBU fuse links can be used indoors as well as outdoors. A muffler attachment can be ordered to limit noise and contamination to indoor equipment during operation.

BBU fuse links are designed to be interchangeable with other leading manufacturers and are available from 17kV through to 38kV, from 3 to 200 amps, with K, E and SE time-current characteristics.

Boric Acid fuse link employs calibrated silver elements combined with boric acid crystals for its interruption media. The mechanical utilisation of the spring and rod mechanism creates an interruption technique that offers mild exhaustion during fault interruption.

Boric Acid fuse links are ideally suited to provide distribution transformer protection within electrical distribution networks.

Features of BBU Fuses

A complete distribution transformer package from a single source. Cooper Bussmann offers a single source for all of your protection needs, both fuse links and fuse mount are fully interchangeable with other manufacturers product lines.

Sealed fuse links - All BBU fuse links are sealed from moisture ingress, preventing deterioration of performance in the fields and improving overall network reliability while reducing costs.

Fully tested - Cooper Bussmann BBU fuse links are tested to both ANSI C.37 and Australian standard AS1033.1, which due to Australia's unique landscape and harsh climate, is widely regarded as the most onerous type test of expulsion fuse link style protection in the world today.

Single piece end fittings - Cooper Bussmann fuse link package comes with single piece end fittings, reducing set-up time in the field and lowering inventory, thereby improving network productivity.

Single wrench installation - The fuse links are designed to be installed with a single type of tool, again reducing maintenance, replacement and installation costs.

Other features to improve safety and overall reliability induce the use of a Nichrome strain element, to reduce susceptibility to spurious operation in the field caused by vibration and corona, a glass epoxy tube, preventing warping during long time exposure and permanent date marking facilitating a more robust Operation and Maintenance regime.

Boric Acid Fuse Links

BBU Fuse Link Mount Construction

Bird proof design insulator provides insulation characteristics higher than ANSI distribution cut-out standards and equal in most cases to ANSI switch and bus standards

BBU Fuse construction

Principle parts of the replaceable BBU fuse unit are shown in the cross section view. Main operating parts are the silver element, arcing rod, boric acid cylinder and spring. A glass epoxy tube encloses the assembly.

The use of a pure silver element and Nichrome wire stain element makes the BBU less susceptible to outages caused by vibration, corona corrosion, and aging of the fuse elements. It is not damaged by transient faults or overloads which approach the minimum melt point.

The components are housed in a fiberglass reinforced resin tube with plated copper contacts. Positive connection is maintained between the arcing rod and contact with a sliding tulip contact.

BBU End Fittings

Boric Acid Fuse Links

Operation

BBU expulsion fuse links utilise the proven performance of boric acid to create the de-ionizing action needed to interrupt the current. Fault interruption is achieved by the action of an arcing rod and a charged spring, elongating the arc through a boric acid chamber upon release by the fuse element.

At high temperatures, boric acid decomposes, producing a blast of water vapor and inert boric anhydride. Electrical interruption is caused by the steam extinguishing the arc, as the arc is being elongated through the cylinder.

Higher particle turbulence of the boric acid causes the rate of de-ionization in the cylinder to exceed the ionization of the electrical arc. Both high and low current faults are interrupted in the same manner with no foreign material other than the boric acid required. This enables the fuse to interrupt short-circuit within one half cycle and prevents the arc from restriking after a current zero.

After interruption, the gases are expelled from the bottom of the fuse.

The arcing rod is prevented from falling back into its original position by a friction stop at the top of the fuse unit.

When the fuse operates, the upward motion of the spring forces the top of the arcing rod to penetrate the upperseal, striking the latch mechanism.

On indoor applications, this action caused the blown fuse indicator to actuate.

When replacing the blown fuse link, the end fittings should be removed from the operated fuse unit, and if undamaged, clamped onto the new fuse unit.

Application

The BBU Boric acid fuse provides effective protection for circuits and equipment which operate on voltage system up to 34.5kV. They can be used on industrial distribution systems and all fuses are designed for use on the following:

- Power transformers
- Feeder circuits
- Distribution transformers
- Metal-enclosed switchgear
- Pad mount switches

BBU fuse units can be used in indoor applications, and can be used to directly replace competitive equivalent units.

Boric Acid Fuses

Outdoor BBU Mount

Part Number	1Min High Voltage Withstand Test kV	Total Insulator Length Inches (mm)	A Inches (mm)	B Inches (mm)	Approximate Weight (kg)
BBU27-PDM	42	18.3 (465)	20.4 (516.9)	21 (534)	20
BBU17-PDM	35	14.8 (375)	16.8 (426.9)	17.5 (444)	17.5

Outdoor BBU Fuse Fitting

Outdoor end fittings are made of a cast-copper plated alloy. A large hook eye on the upper fitting allows for easy installation into pole-top mountings with a hook stick. The pivotal design of this hook eye provides for proper engagement of the upper live part. The positive locking action of the latch mechanism prevents detachment from the mounting due to shock or vibration. In the event of a fault, the arcing rod will penetrate through the upper end of the fuse unit, and cause the latch to release. Once released, the fuse will rotate down into the drop-out position to indicate a blow fuse condition. The lower end fitting has two cylindrical posts that insert into the lower live part of the mounting. These posts allow the fuse to rotate into the proper engaged position, and suspend the fuse during a blown, drop-out condition.

Boric Acid Fuse Links

Fuse Dimensions

kV max	Fuse Unit Fitting inches (mm)		
	A	B	C
17	19.08 (484)	27.19 (690)	28.82 (732)
27	22.58 (573)	30.69 (779)	32.32 (821)
38	28.76 (730)	36.87 (936)	38.50 (978)

Application Notes

Low currents, usually referred to as overload currents, must be considered as BBU fuses have a rather low thermal capacity. They cannot carry overloads of the same magnitude/duration as motors and transformers of equal continuous currents. For this reason, the BBU fuse must be sized with the load current in mind so the fuse does not open on otherwise acceptable overloads and inrush conditions. Coordination should be considered to help determine what type of fuse is applied. The BBU fuse interrupts at a natural current zero in the current wave and allows minimum of a half-cycle of fault current to flow before the fault is cleared. The time-current characteristics associated with a BBU fuse has a rather gradual slope making it easier to coordinate with downstream equipment. In addition, the BBU is ideal for higher voltage (up to 38kV) and high current applications (up to 200A). It is important to examine the minimum melting and total clearing time-current characteristics of this fuse.

Standards

Cooper Bussmann does not compromise when performance, quality and safety are involved. Exacting standards have been established relative to the design, testing and application of expulsion type power fuses. Compliance with these standards ensures the best selection and performance. The BBU Power Fuses are designed and tested for compliance to global standards such as ANSI and Australian Standard AS1033.1 1990. ANSI (American National Standards Institute) is a non-profit privately funded membership organization that coordinates the development of the US voluntary national standards.

Testing

Cooper Bussmann BBU Power fuse links and fuse mounts were tested in compliance to the standards listed below. This testing was carried out in independent test laboratories in Canada and in Australia by recognised independent power testings laboratories. Thermal and interrupting testing was conducted at 17, 27kV. The entire series of tests was conducted in a specific sequence as stipulated by governing standards without any maintenance being performed. All tests results are verified by laboratory tabulations and oscillogram plots.

- ANSI C37.40 - Service conditions and definitions
- ANSI C37.41 - Power fuse design and testing
- ANSI C37.42 - Distribution fuse ratings and specification
- ANSI C37.46 - Power fuse ratings and specifications
- ANSI C37.48 - Power fuse application, operation and maintenance
- AS1033.1 1990 - Australian standard high voltage fuses expulsion type

Boric Acid Fuse Links

Specifications

Description: Expulsion fuse link style fuse, complete with a single pole porcelain fuse mount offering medium voltage protection for indoor and outdoor applications.

Ratings:

Rated Voltage: 17 - 38kV (for the fuse link)
17 and 27kV (for the fuse mount)

Amps: 3 - 200A (for the fuse link)

IR: 10, 12 or 14kA

Time-Current Curves: see curves on CD at the back of the catalogue.

Agency Information: refer to the 'Standards' paragraph page 106.

Typical Applications:

- Power transformers
- Feeder circuits
- Distribution transformers
- Metal enclosed switchgear
- Pad mount switches

Customer Assistance

Customer Satisfaction Team

The Cooper Bussmann® Customer Satisfaction Team is available to answer questions regarding Cooper Bussmann products.

Calls can be made between:

Europe:

Monday-Thursday 7:30 a.m. - 5:30 p.m. GMT

Friday 7:30 a.m. - 5:00 p.m. GMT

The Customer Satisfaction Team can be reached via:

- Phone: 00 44 (0) 1509 882 600
- Fax: 00 44 (0) 1509 882 786
- E-mail: buleuksales@cooperindustries.com

C³ Cooper Customer Center

The Cooper C³ portal supports the following Cooper Divisions: Cooper B-Line, Cooper Bussmann, Cooper Crouse-Hinds, Cooper Lighting, Cooper Power Systems, Cooper Safety, and Cooper Wiring Devices. Get started today at WWW.COOPERC3.COM by clicking Request User ID and Password.

- Easy to Navigate
- Simple to Use
- Real-Time Data

Application Engineering

Application Engineering assistance is available to all customers. The Application Engineering team is staffed by university-qualified electrical engineers who are available by phone with technical and application support.

Europe:

Monday – Thursday 8:30 a.m. – 4:30 p.m. GMT

Friday 8:30 a.m. - 4:00 p.m. GMT

Application Engineering can be reached via phone, fax or email:

- Phone: 00 44 (0) 1509 882 699
- Fax: 00 44 (0) 1509 882 794
- E-mail: buletechnical@cooperindustries.com

Online Resources

Visit www.cooperbussmann.com for the following resources:

- Product Cross Reference
- Product Data Sheets
- Product Profiles
- Online catalogues for the latest United States and European Catalogues

 **COOPER Bussmann**

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкуренеспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
