

ENTERPRISE-GRADE DEVICE SERVER FOR SECURILY INTEGRATING 'EDGE' EQUIPMENT INTO A NETWORK

The EDS4100 is a combination Ethernet terminal and multi-port device server that delivers unprecedented levels of integration, intelligence, and security, and enables new ways to network-enable legacy equipment. Designed with enterprise-grade networking applications in mind, the EDS4100 provides a hassle-free and inexpensive way to add secure network connectivity to virtually any device with a serial interface.

Available in a four-port configuration, and equipped with flexible power options including Power Over Ethernet (PoE), the EDS4100 is ideal for applications where multiple pieces of equipment need to be connected, remotely accessed, and managed. Featuring Lantronix' powerful Evolution OS™ and a mature protocol stack, each EDS4100 device server offers robust security options like SSL/SSH, AES, 3DES, and RC4 encryption to defend against hostile Internet attacks.

The EDS4100 supports a flexible "Cisco-like" CLI and is equipped with a built-in web server that simplifies configuration and control, making it easier to integrate 'edge' devices such as medical devices, kiosks, POS/retail terminals, or security equipment into the enterprise network.
